

## **Sole Source Letter for BRINC's Drone Program**

BRINC Drones is the sole company that develops the complete hardware, software, and services for the BRINC Drone Program. This program features U.S. manufactured, NDAA-compliant hardware and offers a comprehensive public safety solution. It integrates program-related services, specialized software, both outdoor and indoor drone capabilities, and a drone nest, providing a unique set of features.

### **Outdoor Capabilities: BRINC Responder Drone**

- Integrated loudspeaker (with siren function) and microphone, transforming the drone into a mobile communication hub for negotiations, emergency announcements, and more.
- Equipped with a 3-axis gimbal paired with a high-resolution camera, ensuring stable and clear aerial footage for optimal situational awareness.
- 40x total zoom capability, provides detailed imagery even from a considerable distance, enhancing mission capabilities.
- 640 px thermal camera makes it easy to identify people or see fire through smoke and provides situational awareness even in low or no light conditions.
- With a flight time of 42 minutes, agencies are able to cover larger areas and complete missions more efficiently.
- Integrated emergency lights and siren enhance visibility and make it clear to the public that this is an emergency vehicle deploying to a call for service.
- Emergency responder markings on the drone clearly identify it as a public safety vehicle, and can be customized to include agency badge, patch, or city emblem.
- Forward obstacle avoidance sensors enhance flight safety by detecting and navigating around obstacles in real-time, reducing the risk of collisions.
- Features a versatile attachment rail, accommodating accessories such as a spotlight and payload dropper.
- Included AVSS parachute offering a streamlined FAA approval process for drone operators wishing to conduct operations over people.
- IP X4 weather resistance for greater useability in harsh conditions.
- Designed and manufactured in the USA, meeting the security standards set forth by the National Defense Authorization Act (NDAA).
- Lemur 2 and Responder share a common controller, charger, accessories, mesh radios, and software making it easy to standardize on a single solution.
- Blended cellular connection using both a 4G LTE module and BRINC Connect mesh networking radios for teleoperations or robust local control.

## **Deploy From Pre-Positioned Sites: BRINC Responder Station**

- Enables autonomous drone take-off and landing procedures, streamlining mission deployment and operational efficiency while being ready to deploy at a moment's notice.
- An automatic charging mechanism charges the drone by centering it within the Station, where compatible contacts on the drone's legs establish a connection, ensuring operational readiness.
- Station doors provide a protective shield, safeguarding the drone from environmental factors such as adverse weather conditions, dust, and debris.
- Station is engineered to operate in challenging climates, ensuring reliable performance under adverse weather conditions.
- Rapid opening mechanism under 5 seconds for rapid response.
- Common 120 VAC (Standard US Plug, NEMA 5-15) plug allowing it to be plugged in a standard outlet.
- Critical components are elevated 13 inches above ground level, making it resistant to standing water in extreme weather conditions.
- Designed and manufactured in the USA, meets the security standards set forth by the National Defense Authorization Act (NDAA).
- Integrated, 30fps drone bay camera that streams directly to BRINC LiveOps for tracking drone status.

## **Indoor Capabilities: Lemur 2 Drone**

- Integrated loudspeaker and microphone, transforming the drone into a mobile communication hub for negotiators.
- Glass breaker attachment, for effective entry into structures and ventilation of buildings.
- Payload Dropper Attachment, for delivering or dragging small objects during negotiations.
- Turtle Mode enables the LEMUR 2 to automatically flip back and redeploy in the event of being knocked over on its back.
- 6 hour perch time for extended eyes on critical locations.
- 190 degree gimbal range enabling the ability to look straight up above the drone.
- Integrated blue and white lights built into the gimbal. Lighting modes include persistent or strobe lights depending on the needs of the situation.
- Produce real-time floor plans while the drone is in flight, utilizing LiDAR sensors that stream data directly to the controller.
- Designed and made in the USA, meets the security standards set forth by the National Defense Authorization Act (NDAA).

### **Throwable Communications Device: BRINC Ball**

- Integrated loudspeaker and microphone, transforming the BRINC Ball into a throwable communication hub for negotiators.
- Simple dial-to-connect interface, allowing on and offsite officers to connect to their BRINC Ball over a 4G connection through any available phone.
- Remote text commands, for accessing settings, checking battery life, and audio adjustments during a deployment.
- Durably manufactured, the BRINC Ball is designed to survive 10-foot drops onto concrete..
- Tamper-resistant design, with a custom-designed “key” to access the on/off switch.
- Integrated paracord loop, to allow officers to quickly deploy, and redeploy the BRINC Ball on extended missions.

### **Integrates with BRINC LiveOps, a cloud-based platform streamlining drone program operations, offering the following combination of features:**

- View live streams from all connected BRINC drones, covering both outdoor and indoor drone operations. Including 4K color, zoom and thermal sensors.
- Teleoperation capability enables real-time, remote deployment and control of Responder through LiveOps, enabling operators to scalably deploy Responder to emergencies across their jurisdiction.
- Augmented reality overlay adds an extra layer of intelligence to coordinate response and pinpoint exact locations with the ability to see street names and addresses directly on live video feeds.
- Integrated with Live911, which feeds 911 call locations and allows teleoperators to hear live 911 call audio, further enhancing response capabilities.
- Import call-for-service locations directly from Computer-Aided Dispatch (CAD) systems, which enhances response times.
- Stream LEMUR 2 LiDAR data to LiveOps for stakeholders while the drone autonomously creates and shares 3D maps, saving all information on LiveOps.
- Communicate using the drone's and BRINC Ball's built-in loudspeaker and microphone, seamlessly connected to the LiveOps platform.
- Enhance negotiations with A.I. call transcriptions on LiveOps, ensuring accuracy, real-time insights, and collaborative decision-making.
- Manage fleets and teams, oversee pilots, maintain detailed flight records, and track call history.
- Integrated data and transparency dashboard, allowing the community to check and review drone operations.
- LiveOps is CJIS compliant, meeting FBI standards for managing criminal justice information, ensuring secure data handling.

- Data is securely hosted on AWS servers within the U.S., adhering to domestic data residency requirements.

#### **Comprehensive airspace awareness integrated into BRINC LiveOps:**

- ADS-B (Automatic Dependent Surveillance-Broadcast) broadcasts aircraft location, speed, and other data to air traffic control and nearby aircraft. The FAA mandates ADS-B Out for most aircraft in controlled US airspace, making this data essential for drone systems to monitor airspace traffic.
- Ground-based radar provides dual redundancy for enhanced safety alongside ADS-B's comprehensive airspace awareness. It identifies moving objects within 75 to 400 feet, including a 100-foot buffer, ensuring accuracy even for non-ADS-B compliant aircraft.
- Integrated weather data provides real-time and forecasted information, ensuring operators understand environmental factors that could impact drone flights, enhancing safety and efficiency.
- Integration with national airspace alerts ensures adherence to national airspace regulations and temporary flight restrictions (TFRs), allowing safe and compliant flight operations.
- Receive alerts for nearby aircraft, weather, or airspace restrictions, ensuring awareness of changing airspace conditions.
- A fusion of all services gives pilots the information they need to quickly and safely make decisions, as well as be alerted to what they need to observe.

#### **Regulatory, Services, and Support**

- BRINC regulatory support will help your agency obtain waivers, certificates of authorization (COAs) and more for operational compliance.
- In-person, virtual training and training the trainer options for personnel across all skill levels. This includes ongoing educational resources as new software releases come out.
- Provides robust operational support, including 24-hour phone support assistance, help with data analysis, and ongoing operational optimization.
- Collaborate with your agency to develop transparent communication strategies and community engagement initiatives.
- BRINC ensures a seamless installation process for its stations, optimizing location and deployment functionalities to enhance the reliability of the system.
- Get the latest BRINC technology plus unlimited replacements & repairs with the BRINC Safeguard program.
