1. EXECUTIVE SUMMARY

A. Summary

The City of Redmond is working to address critical facility infrastructure needs and reduce utility consumption. As part of that effort, Integrity Energy Services (IES) conducted an Investment Grade Audit (IGA) of the lighting at Redmond City Hall. The enclosed Energy Services Proposal summarizes the results of the Investment Grade Audit (IGA) and provides City of Redmond the means to implement energy efficiency measures through an Energy Saving Performance Contract.

Integrity Energy Services worked closely with city stakeholders and the State of Washington Department of Enterprise Services (DES) Energy Program to perform the audit. Based on detailed site investigation and staff interviews IES identified a list of Energy Efficiency Measures (EEMs) options to upgrade the lighting. The City of Redmond project team selected an option for implementation after evaluation of each EEM for utility saving opportunity, system performance, constructability, and cost.

B. Project Overview

Based on the IGA analysis and direction from the customer and the DES Energy Program, Integrity Energy Services proposes to implement the following energy efficiency measure through an Energy Saving Performance Contract with the DES Energy Program:

- EEM #1D LED Troffer Kits & Local Lighting Control Upgrades

Note: A detailed summary of the measure is included in Section 2 of this Energy Services Proposal.

C. Scope of Services

The scope of services under this Proposal includes design, construction, commissioning, and monitoring & verification for 1 year. Although City of Redmond will operate and maintain the new equipment, Integrity Energy Services will provide important monitoring services to help ensure the predicted savings are achieved throughout the term of the agreement. This will include review of the system performance throughout the 3 year M&V term.

D. Financial Overview

The total project cost, including applicable taxes and DES Energy Program fee, is $764,062. The utility incentives to be provided by the UTILITY are estimated at $108,717. Construction of the selected measure will provide guaranteed annual utility savings resulting in $17,967 cost savings based on current utility rates. Additionally, this project will generate $3,271 of annual operational cost savings. After incentives, the final project cost is estimated at $655,345. All construction costs will be open book to the Client and DES Energy Program, and any cost savings will revert to the Client at the end of the project.

E. Guarantees

Integrity Energy Services guarantees that the project cost, related specifically to energy savings and the project scope, will not exceed the maximum price of $657,988. In addition, IES is guaranteeing that the project will perform so that the energy savings will meet or exceed the guaranteed Energy Savings 147,927 kWh per year. The guaranteed utility savings is based upon the Guarantee Multiplier shown in Savings Summary Table C.

F. Environmental Benefits

In addition to building improvements and energy savings, there is a significant positive impact on the environment as a result of this project. The energy savings produced as a result of this project will directly reduce the amount of power produced by the Utility. As noted above, this project will reduce City of Redmond's electrical and gas consumption that equates to reducing CO2 emissions by 66 tons per year, the equivalent of planting 18 acres of trees or eliminating 11 households annual carbon emissions (reference the DES Energy Program spreadsheet).

G. Summary of Benefits

Implementation of the energy efficiency measures outlined in the ESP will result in the following benefits:

- Secure $108,717 of alternative funds including grants and incentives
- Save $21,238 annually in utility and operational costs
- Maintenance labor cost savings: Future labor cost savings will result from installation of these measures. While we are not claiming these savings in order to pay for the project, the need for extensive maintenance labor will be reduced.
- Extended System Life: The existing system approaching the end of its economic life and is in need of replacement.
- Annually educe 66 tons of CO2 – equivalent to planting 18 acres of trees or 11 households annual carbon emissions.

H. Preliminary Project Schedule

Integrity Energy Services understands that timely project completion is critical and will work with City of Redmond to develop a detailed design and construction schedule once a contract has been finalized. A Preliminary Progress Schedule, Table "H", is located in Section 4 and describes project major milestones. A detailed construction schedule will be provided following project "Notice to Proceed" by DES Energy Program.

I. Conclusion

Integrity Energy Services appreciates the opportunity to support City of Redmond's efforts to significantly reduce their utility consumption and expenditures. This project represents a key element to achieve those goals while addressing aging infrastructure and improving system reliability and performance. IES looks forward to working with the City of Redmond and the Department of Enterprise Services Energy Program to implement a highly successful project.

2. EEM SCOPES OF WORK SUMMARY

EEM1D – LED Troffer Kits & Local Lighting Control Upgrades

A. Existing Conditions

The existing lighting was installed during the original construction of the building in 2006. It is predominantly parabolic troffer fixtures with compact fluorescent lamps in offices and open, cubicle workspaces. There are also a mixture of strip, direct/indirect, and can lighting.

The facility lighting is controlled by Blue Box Lighting Control Panels.

B. Issues/Challenges

The existing lamps are not as energy efficient as current LED technology and require relatively frequent maintenance and replacement. The lighting control system is also outdated and requires some manual operation to meet the facility needs.

C. Proposed Solution

Summary of measure scope of work

Electrical

1. Replace existing parabolic troffer fixtures with LED troffer kits. Replace various types of compact fluorescent fixtures with LED equivalents. New lighting will have local controls. Please refer to the following line by line audit and product data sheets for more details.

Commissioning

1. IES will provide comprehensive commissioning to verify proper operation of the system. Perform and document functional performance testing to ensure the equipment and systems are operating optimally, reducing energy use.

D. Benefits

This is an opportunity for the City of Redmond to significantly improve the functionality of lighting at City Hall while reducing utility and operational expenditures. The reduction in energy use would facilitate compliance with Washington State's mandatory Clean Buildings Performance Standard.

BLTR Relight Series

2BLT4R

2' x 4' Relight LED

FEATURES & SPECIFICATIONS

INTENDED USE — The 2BLT4R is designed to retrofit nearly any 2x4 fluorescent lensed or parabolic troffer with normal dimensions and construction (see dimensions). The standard kit is designed for T-grid mounted recessed units, but optional brackets are available for drywall / "hard-lid" ceilings or surface mounted housings. All 2BLT4Rs are UL rated for use in air-handling troffer housings. Integrated system bypasses all old fluorescent components for reliable, long-lasting performance and is a perfect platform for modern networked controls. Certain airborne contaminants can diminish integrity of acrylic. **Click here for Acrylic Environmental Compatibility table for suitable uses**.

CONSTRUCTION — Universal end brackets are painted steel and are designed to fit securely in nearly any 2x4 lensed or parabolic troffer (see dimensional requirements). Unitized doorframe reflector and electrical chassis does not require any field assembly, and is painted after fabrication with high reflectivity matte white powder coating. Diffuser trim rings add a finished appearance while providing a mounting point for integral controls and sensors.

All electrical and mechanical components can be accessed from below the ceiling plane.

OPTICS — Volumetric illumination is achieved by creating an optimal mix of light to walls, partitions and vertical and horizontal work surfaces – rendering the interior space, objects and occupants in a more balanced, complimentary luminous environment. High performance extruded acrylic diffusers conceal LEDs and efficiently deliver light in a volumetric distribution. Four diffuser choices available - curved and square designs with linear prisms or a smooth frosted finish. Optional lower glare, very low UGR (Unified Glare Rating) lens available.

ELECTRICAL — Long-life LEDs, coupled with high-efficiency drivers, provide superior quantity and quality of illumination for extended service life. Greater than 80% LED lumen maintenance at 60,000 hours (L80+ > 60,000). Calculated L70 lumen maintenance greater than 150,000 hours. Color variation within 3-step MacAdam ellipse (35DCM)

Base (non-configurable) BLTR: Generic 0-10 volt dimming driver. Dims to 10%

Configurable BLTR: 2x4 BLTR kits provide > 135 LPW across a broad range of lumen outputs, CCTs, and driver options.

eldoLED driver options deliver choice of dimming range, and choices for control, while assuring flicker-free, low-current inrush, 89% efficiency and low EMI.

Step-level dimming option allows system to be switched to 50% power for compliance with common energy codes while maintaining fixture appearance.

Optional Field Adjustable Output (FAOE, FAO) devices provide a simple mechanical means of "dialing in" preferred high-end lumens.

SENSOR— Integrated sensor (individual control): SensorSwitch MSD7ADCX ((Passive infrared (PIR)) or MSDPDT7ADCX ((PIR/Microphonics Dual Tech (PDT)) integrated occupancy sensor/automatic dimming photocell allows the luminaire to power off when the space is unoccupied or enough ambient light is entering the space. See page 5 for more details on the integrated sensor.

Integrated Sensor (nLight Wired Networking): This sensor is nLight-enabled, meaning it has the ability to communicate over an nLight network. When wired, using CAT-5 cabling, with other nLight-enabled sensors, power packs, or WallPods, an nLight control zone is created. Once linked to a Gateway, directly or via a Bridge, the zone becomes capable of remote status monitoring and control via SensorView software. See page 6 for the nLight sensor options.

Integrated Smart Sensor (nLight Air Wireless Platform): The rES7 sensor is nLight AIR enabled, meaning it has the ability to communicate over the wireless nLight control platform. It is available with an automatic dimming photocell, and either a digital PIR or microphonics (PDT) dual technology occupancy sensor. It pairs to other luminaires and wall switches through our mobile app, CLAIRITY™, which allows for simple sensor adjustment. See page 6 for more details on the Integrated Smart Sensor.

Integrated Wireless Sensor (single room control): SensorSwitch VERTEX JOT or JOTVTX15 luminaire-embedded occupancy and ambient light sensor allows the luminaire to power off when the space is unoccupied or when enough ambient light is entering the space. See page 4 for more details on the integrated wireless sensor.

INSTALLATION — After existing fluorescent components are removed from the host housing, universal end brackets are secured in place with TEKS™ screws. The BLTR's integrated driver and light engine door assembly can then be hinged to the universal end brackets and will hang in place for completion of assembly plug-in wiring. Rotate the doorframe assembly closed and pivot the cam latches to secure the doorframe in place. Suitable for damp location installations. Damp location not available with sensor versions.

LISTINGS — UL/cUL Listed for use in fluorescent luminaires. Classified for use in both static and air-handling troffer housings (see installation instructions for details). Installing Relight assemblies per instructions will not impact existing fixture UL listing. Tested to LM80 standards.

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

BUY AMERICAN ACT — Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT regulations.
Please refer to www.acuitybrands.com/buy-american for additional information.

Standard 2BLT4R meets TAA requirements.

WARRANTY — 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

NOTE: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

JOTVTX15	Wireless occupancy sensor with "Just One Touch" pairing[19]

Standby Mode

NOC	Occupancy sensor disabled[13]

Options

FAOE	Field adjustable output - Energy Focused. 8 increment selections down to 17% wattage / 23% lumens
FAO	Field adjustable output (old style) - 8 increment selections down to 71% wattage / 67% lumens
BDP	Disconnect Plug
EL7L	700 lumen battery pack (Noncompliant with CA T20)[16]
EL14L	1400 lumen battery pack (Noncompliant with CA T20)[16]
E10WLCP	EM Self-Diagnostic battery pack, 10W Constant Power, (Certified in CA Title 20 MAEDBS)[15]
BGTD	Bodine Generator Transfer Device[14]
GLR	Fast-blowing fuse[15]
GMF	Slow-blowing fuse[15]
NPLT	Narrow pallet
BAA	Buy America(n) Act Compliant
JP20	Job Pack

Notes

1 Consult factory for airflow data.
2 Approximate lumen output.
3 Not available with EL7L or EL14L battery packs.
4 347 not available with SLD.
5 GZ1, GZ10 not available with any Control or Sensor options.
6 Not available with N80, N80EMG, N100, N100EMG, NLTAIR2, or occupancy control.
7 nLight EMG option requires a connection to existing nLight network. Power is provided from a separate N80 or N100 enabled fixture.
8 Must order with RES7, RES7PDT, or RIO sensor. Only available with EZ1 driver.
9 Must specify diffuser with trims rings. See sensor options on page 4.
10 Requires N80, N80EMG, N100, or N100EMG.
11 Only available with EZ1 driver option. 0-10v dimming wires not accessible via access plate. Not available with Controls options.
12 Can only be ordered in conjunction with EZ1, NLTAIR2, RES7/ RES7PDT. Occupancy sensor disabled at factory but can be re-enabled upon commissioning.
13 Requires BSE labeling. Consult factory for options.
14 Must specify voltage, 120 or 277 with GLR & GMF fusing.
15 GZ1 and GZ10 driver not available with battery pack when specifying 72LHE or 85LHE lumen options. Must use EZ1 driver.
16 See UL924 Sequence of Operation instruction on page 3. When combined with the EZ1 option, can be used as a normal power sensing device for nLight AIR devices and luminaires with EM emergency options.
17 Wired 0-10v dimming control not available. Not available with nLight Interface or Controls options. Not available with NOC, SLD, BGTD, or FAO. Must specify diffuser with trim rings.
18 Extended leadtimes and minimum order quantities may apply. Consult factory.

Fit & Compatibility

The 2BLT4R Relight Assembly was designed to upgrade recessed 2x4 fixtures, including most parabolic and lensed troffers from all major manufacturers. Dimensional requirements are below, but Lithonia Lighting recommends a trial installation prior to purchasing project quantities.

Emergency Battery Pack Options - Field Installable

Battery Model Number	Wattage	Runtime (Minutes)	Lumen Output* @ 120 Lumens/Watt	Other
ILB CP07 2H A	7W	120	840	Storm Shelter / 2 Hour Runtime
ILB CP10 A	10W	90	1200	
ILBLP CP10 HE SD A	10W	90	1200	Title 20, Self Diagnostic
ILB CP10 HE AELR A	10W	90	1200	Title 20; Enabled with Self Testing, Automated Reporting (STAR)
ILBLP CP15 HE SD A	15W	90	1800	Title 20, Self Diagnostic
ILB CP20 HE A	20W	90	2400	Title 20
ILB CP20 HE SD A	20W	90	2400	Title 20, Self Diagnostic

All the above are UL Listed products that are certified for field install external/remote to the fixture.
*Minimum delivered lumen output to assist in product selection for increased fixture mounting height.
The CP10 delivered emergency illumination outperforms legacy 1400 lumen fluorescent emergency ballast.
Please contact us at productsupportemergency@acuitybrands.com for any Emergency Battery related questions.

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

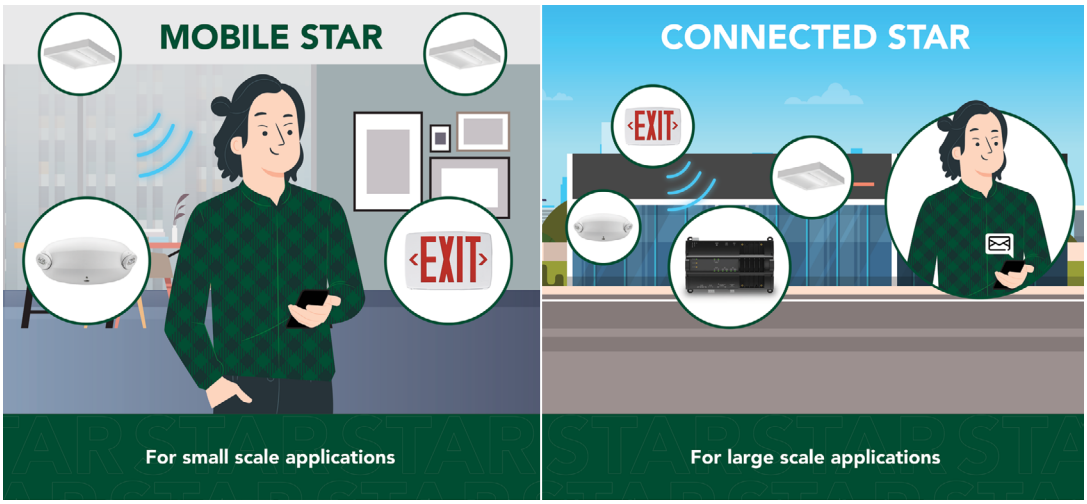
- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CL**AIR**ITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

Enabled with STAR

Emergency Lighting with Self-Testing Automated Reporting (STAR), enables self-testing and automated reporting to aid in life safety code compliance. Build your solution and choose your preferred deployment from Mobile STAR, where test data is logged in each individual unit and broadcast to the Cl**AIR**ity™**+** app, or Connected STAR, where test data is logged in the STAR Gateway by IOTA® and emailed directly. **Leave the ladders, disruptions and written records behind with emergency lighting solutions with STAR!**

Life Safety Code NFPA 101 testing and reporting requirements for emergency lighting include:

- Testing for 30 seconds every 30 days
- Testing for 90 minutes once a year
- Record keeping and to report to the authority having local jurisdiction



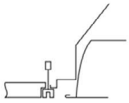
Application Guide

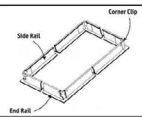
2BLT4R — Typically used for lensed troffer installations. Assembly contains white end brackets and is supplied with white trim strips for use in closing gaps down fixture sides (installer's choice - not required).

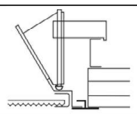
**Note: This kit is also UL rated for use in air-handling host housings, but white end bracket may not match fixture finish. This kit will fit in Lithonia's Avante non-air fixture.*

2BLT4R A — Typically used for parabolic installations with black reveal. Assembly contains black end brackets to match black reveal around host housing. Does not interfere with host housing air supply/return if present (along fixture sides).

BLTR Bracket "fit" recommendations





Ceiling type	**15/16" T-grid**	**9/16" T-grid**	**Narrow Screw-slot**	**Hard Ceiling w/ "Lay-In" style plaster frame** (drywall grid adapter)	**Hard Ceiling with Integral drywall mounting** ('swing gate' housing)	**1x1 hard tile ceiling**	**Deep louver riser** ("renovator" parabolic)
Recommended BLTR bracket type	**Standard**	**Standard**	**F bracket ***	**Standard**	**F bracket**	**F bracket**	**LPB bracket**

**Standard bracket may work in some*

BLTR "F" bracket vs. standard

Because the"F" bracket does not have the standard T-grid return flange, it can be used in many hard ceiling / drywall frame installations where the standard bracket would be obstructed.

This "F" bracket can also often be used in narrow screw-slot grid ceilings.

Replacement / Trial parts

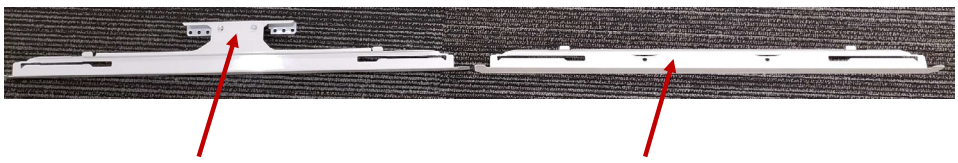
To order BLTR Standard 2pc end bracket replacement (shipped as assembled units):

- 2x4 = CI code *257YX0 T5746 (qty 2 required per kit)
- 2x2 = CI code *257YX0 T5746 (qty 2 required per kit)
- 1x4 = CI code *259VRM T5745 (qty 2 required per kit)

To order BLTR "F" 2pc end bracket replacement (shipped as assembled pairs):

- 2x4 = CI code *254PVS 2BLTRF FLANGE BRKT ASSEMBLY (qty 1 req. per kit)
- 2x2 = CI code *254PVS 2BLTRF FLANGE BRKT ASSEMBLY (qty 1 req. per kit)
- 1x4 = CI code *255SWN BLTRF FLANGE BRKT ASSEMBLY (qty 1 req. per kit)

Differences between standard BLTR 2pc bracket and LPB 1-piece low profile bracket



Current 2-piece bracket has upper "T" bracket that mounts in most troffer endplates and bridges over most obstructions

To order BLTR Standard 2pc end bracket replacement (shipped as assembled units):

- 2x4 = CI code *257YX0 T5746 (qty 2 required per kit)
- 2x2 = CI code *257YX0 T5746 (qty 2 required per kit)
- 1x4 = CI code *259VRM T5745 (qty 2 required per kit)

1-piece design was originally developed for large customer to fit some older troffers where standard bracket would not fit due to endplate obstructions

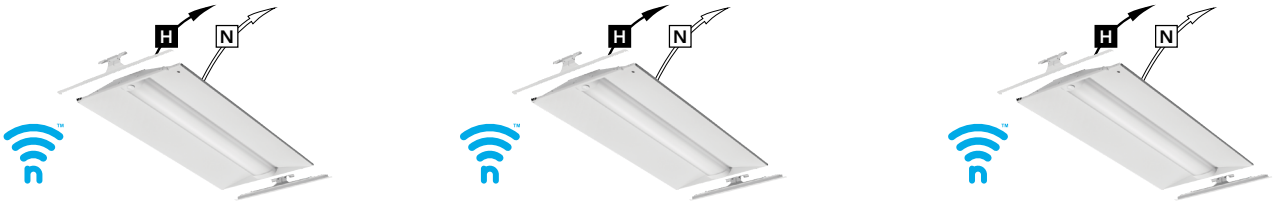
To order BLTR low profile 1pc LPB bracket (shipped as assembled units):

- 2x4 = CI code *268PJK GPF N320810 (qty 2 required per kit)
- 2x2 = CI code *268PJK GPF N320810 (qty 2 required per kit)
- 1x4 = CI code n/a *not available*

nLight Platform

nLight embedded fixtures offer:	Customers get:
Manual Dimming	Convenience and visual comfort for occupants
Motion Sensing and/or Daylight Harvesting	Energy savings and code compliance
Fixture or Group Level Control	Ability to configure lighting to the space requirements
Flexibility	Ease of fixture moves, adds and changes
Wireless Wall Switch (nLight AIR Only)	Ease and flexibility of placement
Astronomical and Time of Day Scheduling	Energy savings and building security
Scalable Solution	nLight controls to grow with your business
Future-Ready	nLight platform to set foundation for future upgrades and capabilities

nLight Air Wireless



BLTR Series

Simple as 1,2,3

1. Install the nLight® AIR fixtures with embedded smart sensor
2. Install the wireless battery-powered wall switch
3. With CL**AIR**ITY app, pair the fixtures with the wall switch and if desired, customize the sensor settings for the desired outcome

SensorSwitch JOT Enabled Wireless Solution

Designed with contractors in mind, the SensorSwitch JOT enabled wireless solution offers a straightforward approach to the installation and pairing of lighting fixtures and controls. Absolutely no 0-10V control wires and no mobile apps are needed with JOT enabled products, allowing for lightning speed installation right out of the box.

1. Power: Install JOT enabled fixtures and controls as instructed.
2. Pair: Insert the pairing tool into the pinhole on the wall switch; press and hold any button for 6 seconds.
3. Play: Once paired, each fixture will individually dim down to 10% brightness. All products will be fully functional.

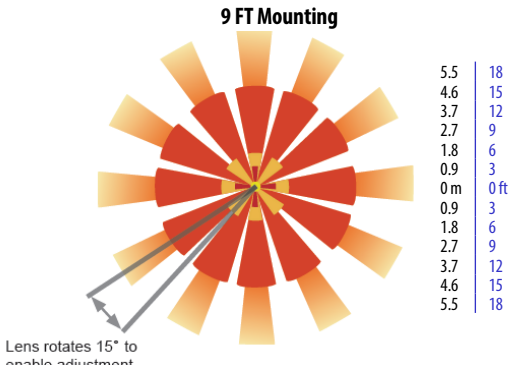
Sensor Coverage Pattern
Mini 360° Lens

- Recommended for walking motion detection from mounting heights between 8 ft (2.44 m) and 20 ft (6.10 m)
- Initial detection of walking motion along sensor axes at distances of 2x the mounting height up to 15 ft (4.57 m) and
- 1.75x up to 20 ft (6.10 m).
- Provides 12 ft (3.66 m) radial detection of small motion when mounted at 9 ft (2.74 m)
- Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor



Integrated Sensor with Individual Control

The MSD7ADCX PIR occupancy sensor/automatic dimming photocell is ideal for areas without obstructions and where daylight harvesting may be desired. Suggested applications include, but not limited to, hallways, corridors, storage rooms, and breakrooms or other areas where people are typically moving.

The MSDPDT7ADCX PIR/Microphonics Dual Tech occupancy sensor/automatic dimming photocell is ideal for areas with obstructions and where daylight harvesting is desired. Suggested applications include, but not limited to, open offices, private offices, classrooms, public restrooms, and conference rooms.

nLight AIR Wireless

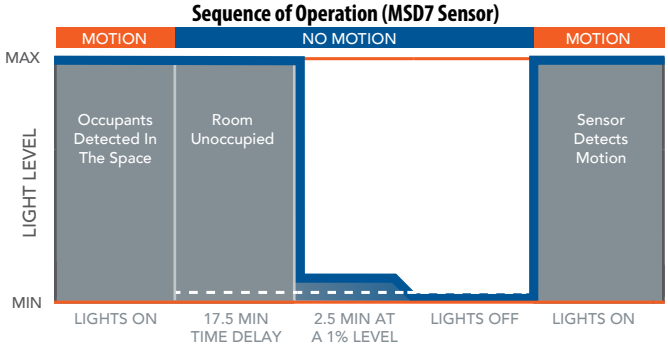
nLight AIR is the ideal solution for retrofit or new construction spaces where adding additional wiring can be labor intensive and nLight AIR is available with or without an integral sensor. The integrated rES7 or rES7PDT smart sensors are part of each luminaire in the nLight AIR network, which can be grouped to control multiple luminaires. The granularity of control with the digital PIR occupancy detection and daylight sensing makes a great solution for any application.

nLight Wired Networking

The nES 7 is ideal for small rooms without obstructions or areas with primarily walking motion. Ideal areas include hallways, corridors, storage rooms, and breakrooms. Additionally, the nES7ADCX includes an integrated photocell, which enables daylight harvesting controls.

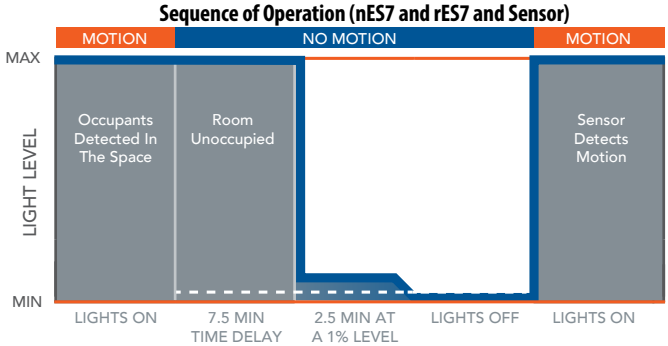
For areas like restrooms, private offices, open offices, conference rooms or any space with obstructions, the nES PDT 7 dual technology sensor is recommended. The nES PDT 7 utilizes both PIR (passive infrared) and Microphonics technologies to detect occupancy. Additionally, the nESPDT7ADCX includes an integrated photocell, which enables daylight harvesting controls which is ideal for areas where windows are present.

Sequence of Operation (MSD7 Sensor)



*The presetting on the automatic dimming photocell is 5fc.

Sequence of Operation (nES7 and rES7 and Sensor)



*The presetting on the automatic dimming photocell is 5fc (NES7) and 10fc (RES7).

OVERVIEW

The nLight® AIR rPODBA is a wireless, battery-powered wall switch including toggle and/or raise lower features with optional multi-pole control. It provides a user with local control of a lighting zone. A true wire-free switch, these single gang decorator style devices have soft-click buttons and a green LED indicator for each button. The wall switches communicate with other nLight AIR devices via radio frequency (RF). A battery-powered wall switch can work with any nLight AIR enabled fixture or power pack to provide toggle switch operation. Wall switches with the DX option have the added ability to adjust the level of any nLight AIR controlled dimmable light fixture.

FEATURES

- Powered with three off-the-shelf lithium AAA batteries and rated for 10 years of normal use, minimizing battery replacement. (Battery replacement with alkaline batteries does not guarantee a 10-year run time.)
- Communicates with nLight AIR devices via radio frequency (RF) in the 900MHz spectrum
- Soft-click push-button control
- Single pole or two pole on/off control with optional raise/lower option ("DX" option)
- 2 or 4 preset scene control fully configurable via CL**AIR**ITY™+ mobile app
- Maximum of 4 total preset scenes per nLight AIR group
- Batteries are included and preinstalled, allowing for a simple unbox and mount installation
- Wireless multi location dimming

CUSTOM BUTTON ENGRAVING

- Custom lettering for units can be specified and ordered at: nGrave Form
- To ensure color uniformity, ordering templates facilitate specifying all buttons on a unit as custom lettered. Replacing single buttons is not recommended
- Custom buttons will ship separately and require field installation

Warranty
Five-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application. Specifications subject to change without notice.

A+ Capable

This item is an A+ capable component, which has been designed and tested to provide out-of-the-box luminaire compatibility with simple commissioning, when included as part of an A+ Certified™ Solution.

To learn more about A+, visit www.acuitybrands.com/aplus.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

nLight® AIR rPODBA: Battery-Powered Wall Switch

Note: nLight® AIR devices are only compatible with other nLight AIR enabled devices and are not cross compatible with other nLight product lines at this time.

Design Select options indicated by this color background.

ORDERING INFORMATION

ORDERING INFORMATION

All rPODBA switches are shipped with wall plates, however, the following order information is available to acquire replacement wall plates.

Wall Plate - Additional or Replacement					
Series	**# of Gangs**	**Color**			**Packaging**
WS XPODA Wall Plates (Standard) SSW Sealed Covers	1 GNG Single Gang	WH White IV Ivory GY [2] Gray	AL [2] Light Almond BK [2] Black RD Red	VP[2] Variety Pack	[blank] Single Unit [3] M5 [2] 5 Pack M6 [1,2] 6 Pack

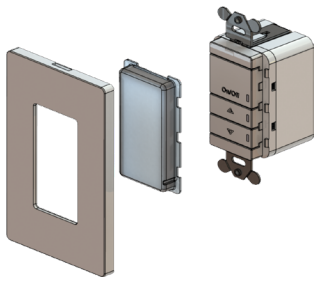
Accessories	
RPODBA MOUNTRING	Replacement mounting ring for rPODBA and rPODB switches
SSW 1GNG WH	Sealed screwless wall plate to prevent liquid intrusion, white
SSW 1GNG IV	Sealed screwless wall plate to prevent liquid intrusion, ivory
SSW 1GNG RD	Sealed screwless wall plate to prevent liquid intrusion, red

1. Available only for variety pack.
2. Not available for SSW series.
3. Single units only available for SSW series.

WALL SWITCH CLEANING

It will occasionally be necessary to clean the wall switches. All rPODBA switches may be wiped down with a soft cloth or paper towel dampened with glass cleaner, vinegar and water, hydrogen peroxide, or a mild abrasive. Spray a limited amount on the cloth or paper towel prior to applying. Do not spray cleaner on the switches directly, and do not wipe the switches down with a towel saturated (drips when wrung out) with cleaner.

If the ability to clean the switches using chemical spray disinfectants is desired, we recommend the use of the Sealed Screwless Wall Plate (SSW). The Sealed Screwless Wall Plate is a cover for the standard wall plate, designed with an IP54 rating. It consists of a transparent silicone rubber layer that covers the wall switch to prevent liquids from entering the wall switch while maintaining a tactile button feel. The Sealed Screwless Wall Plate is the ideal solution to prevent liquids from entering the wall switch while maintaining a tactile button feel. The Sealed Screwless Wall Plate is the ideal solution to help protect a wall switch from fluid entering the device while enabling the use of disinfectants recommended by the EPA for use against SARS-CoV-2, the coronavirus that causes COVID-19, which often require spraying or saturating the surface.



For more information on the Sealed Screwless Wall Plates

SPECIFICATIONS

Dimensions	WallPod (including wall plate): 4.83" H x 2.88" W x 1.56" D (122.6mm x 73.1mm x 39.6mm) WallPod (without wall plate): 2.61" H x 1.28" W x 1.56" D (66.3mm x 32.5mm x 39.6mm)
Weight	4.25 oz
Mounting	Single Gang Switch Box or Low Voltage Ring
Color	White, Ivory, Lt. Almond, Gray, Red, Black
Operating Temperature	-40°C to 60°C (indoor use only)
Relative Humidity	Standard: 20 to 75% non-condensing
Radio Frequency	Dual Radio: 900Mhz & 2.4GHz
RF Transmit Power	900Mhz: +20dBm; 2.4GHz: Variable
Wireless Standard	900MHz: IEEE 802.15.4-based 2.4GHz: Version 4.0+ of the Bluetooth specification
Wireless Range	900MHz: Up to 1,000 ft. (~304m) in free space/ line of sight Minimum of 150 ft through typical construction 2.4GHz: Up to 60 ft. (~18m) in free space/ line of sight
Security	Application Data Encryption: AES-128 bit Mutual Entity Authentication Message Confidentiality Message Authentication and Replay Prevention Limited Anonymity Complies with California Civil Code Title 1.81.26, Security of Connected Devices, approved under Senate Bill No. 327 (2018)
Regulatory Compliance	FCC ID: 2ADCB-RMODIT3 RoHS IC: 6715C-RMODIT3 IFETEL: RCPNLNL20-2057 UL 916 (E110912)
Battery Type	3 AAA lithium (included)
Battery Life	10 years (with lithium batteries)
Programming Tool	CL**AIR**ITY™+ mobile app

INSTALLATION OVERVIEW

Installation of the rPODBA is simple, wire free, and does not require special tools. Follow the instructions below to install the rPODBA wall switch.

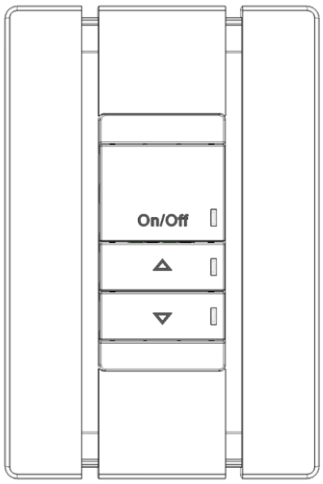
OUT-OF-THE-BOX DECORA WALL PLATE

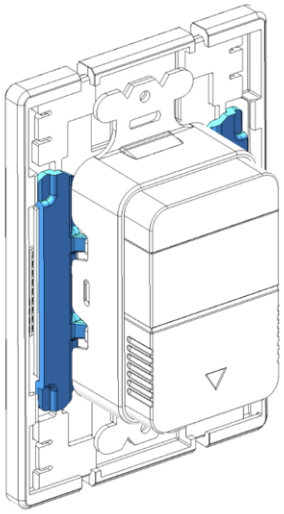
- Remove the wall plate from the device by pulling the sides out to expand the wall plate and release it from the mounting flanges.
- Connect the unit to the gang box
  - The unit will connect to the gang box by screws, one at the top and one at the bottom
  - To ensure correct wall plate installation, drive the screws until the mounting flanges contact the wall surface. If the screws are overdriven, the mounting flanges will disengage, preventing wall plate installation. If this happens, reattach the mounting flange(s) and install to correct position. (The flanges may be reattached by inserting the two tabs in the side of the unit and pushing the part inward to engage the three snaps.)
- Reattach the wall plate
  - Expand the wall plate horizontally
  - Place the wall plate onto the unit
  - Contract the horizontally expanded wall plate onto the unit such that the side flange features seat inside the wall plate
- No wiring needed

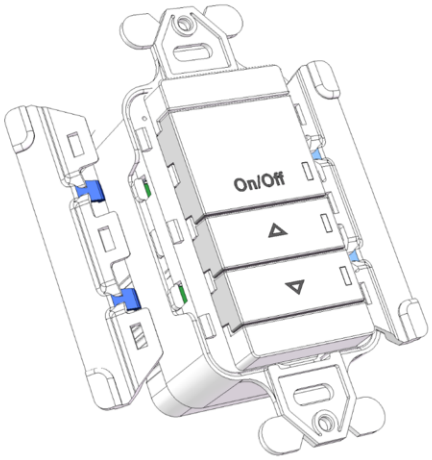
OFF-THE-SHELF DECORA WALL PLATE

When installing the unit with standard off-the-shelf decora wall plates, the following steps should be followed.

- Remove the Acuity wall plate from the device by pulling the sides out to expand the wall plate and releasing it from the mounting flanges.







- Unhook and remove the side flanges from the device
- Connect the unit to the gang box
  - The unit will connect to the gang box by screws, one at the top and one at the bottom
- Attach the wall plate

3. TERMS & CONDITIONS

A. Performance Guarantees

1. Utility Savings Guarantee

   a) Integrity Energy Services guarantees that project implementation as detailed in this Energy Services Proposal will result in utility savings outlined in the Savings Summary Table "C" in Section 4 during the Measurement & Verification (M&V) period starting on the date of Notice of Commencement of Energy Savings.

   b) This annual guarantee will remain in effect for each consecutive year over the term of the Measurement & Verification agreement as indicated in Table "E" in Section 4. The details of the M&V plan are outlined in that table.

   c) In the event that the verified energy savings fall short of the guarantee, IES shall implement one or more of the following options:

      i. Take action to re-align necessary systems and equipment to meet guaranteed performance.

      ii. Pay the Client the amount of the shortfall for that year, based on the dollars as calculated in the guarantee.

2. Equipment Performance Guarantee

   a) Integrity Energy Services guarantees the equipment will perform per the Measurement & Verification Plan Table "E" during the Measurement & Verification (M&V) period starting on the date the client agency accepts the Notice of Commencement of Energy Savings.

   b) This annual guarantee will remain in effect for each consecutive year over the term of the Measurement & Verification agreement as indicated in Table "E" in Section 4. The details of the M&V plan are outlined in that table.

   c) In the event that the verified energy savings fall short of the guarantee, IES shall implement one or more of the following options:

      i. Take action to re-align necessary systems and equipment to meet guaranteed performance.

      ii. Pay the Client the amount of the shortfall for that year, based on the dollars as calculated in the guarantee.

~~3. Standards of Comfort~~

~~The project shall be designed to provide the following standards of comfort. These standards have been incorporated into the energy usage calculations and may affect the actual energy consumption of the project if changed. The Client agrees to maintain these conditions in order to realize the guaranteed energy savings unless modified by the Client and DES Energy Program.~~

~~Indoor Temperatures, occupied:~~

- ~~Winter Minimum - 70 degrees F~~
- ~~Winter Maximum - 74 degrees F~~
- ~~Summer Minimum - 72 degrees F (where mechanical cooling systems are employed)~~
- ~~Summer Maximum - 78 degrees F (where mechanical cooling systems are employed)~~

~~Indoor Temperatures, unoccupied:~~

- ~~Minimum - 55 degrees F~~
- ~~Maximum - 85 degrees F (where mechanical cooling systems are employed)~~

~~Relative Humidity (If humidity control provided)~~

- ~~Minimum - 40%~~
- ~~Maximum - 60%~~

~~Minimum outside air per occupant shall be in accordance with American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) standards and Chapter 4 of the International Mechanical Code, as adopted by the Washington Building Code Council.~~

Illumination Levels:

- Illumination levels shall be as recommended by the Illuminating Engineer's Society of North America (IESNA). Design calculations shall be made for each space, using an 80% lamp depreciation/maintenance factor.
- Average illumination levels shall be checked in each space after 100 operating hours.
- Average illumination shall not be less than 12.5% above the design level.
- For primary and secondary schools, illumination will also meet 1997 WAC 246-366-120 lighting requirements.

B. Measurement & Verification Plan

Integrity Energy Services utilizes the International Performance Measurement and Verification Protocol to guide the project specific measurement and verification plan. IES worked with the Client and DES Energy Program during the Investment Grade Audit to determine the level of measurement and verification required for the project.

The intent of the measurement and verification plan is to document that the guaranteed energy savings are achieved. The savings guarantee is based upon the total project savings,

not the individual Energy Efficiency Measure savings. Savings cannot be directly measured, since they represent the absence of energy use. Instead, savings are determined by comparing measured use before and after implementation of the project, making appropriate adjustments for changes in conditions as outlined in the M&V plan.

Each Energy Efficiency Measure within the project will identify the Key Performance Measurements (KPMs) that dictate the equipment and/or system energy usage. A boundary will be "drawn" around the studied equipment and/or system to identify parameters that directly affect energy consumption. Once identified, these KPMs will be directly measured or estimated. Table "E" in Section 4 outlines the Key Performance Measurements (KPMs) that dictate the project energy usage. In addition to the KPMs, the M&V plan will dictate the length of time that each KPM will be measured. Each KPM has a "Baseline" and "Proposed" operating condition or value. These values are the basis of the energy savings calculations and used to confirm that the guaranteed energy savings have been achieved.

Baseline operating conditions are based on the existing equipment and/or system operating parameters. The Baseline KPMs are based on field observations, measured data, Client provided information or agreed upon conditions. The Baseline KPMs are utilized in calculating the existing energy usage of the system. In some instances, a "Modified Baseline" may be required. A Modified Baseline is required when the existing equipment and/or system does not meet current code requirements that directly increase the energy consumption of a system. An example of such an instance would be an air conditioning unit that is currently utilizing half of the code required ventilation air. Modifications to the unit would require increasing the ventilation air to the new code requirements, thus increasing the unit's energy consumption. The Modified Baseline would characterize the existing unit operation and then increase the ventilation air to code requirements. This higher energy usage will now be the value that is compared against when calculating savings.

Proposed operating conditions are the operating characteristics of the proposed equipment and/or system operating parameters. The Proposed KPMs are based on field observations, measured data, Client provided information or agreed upon conditions. These KPMs are gathered during the startup and commissioning phase of the project and documented as part of the first M&V report. It is critical that the Client and DES Energy Program understand these KPMs and how they affect the energy usage of the equipment and/or systems. Energy savings are based upon the Client maintaining these parameters. If the Client is unable to maintain these KPMs, they shall notify Integrity Energy Services immediately.

C. Utility Rates

The utility rates used in the financial analysis are based upon those in place at the time of the Investment Grade Audit.

D. ESCO Services Provided

1. Energy Audit: The Investment Grade Audit is complete and is attached in Exhibit 1.

2. Provide an Energy Star rating of the facility and enter 12 months of utility data into the Energy Star Portfolio Manager.
3. Operation and Maintenance Measures: See Table “I” in Section 4.
4. Design Services: Provide a detailed engineering design as needed to obtain Client and DES Energy Program review and approval of the proposed system, and obtain competitive bids. Provide construction support services, start-up, and testing. Provide as-built drawings in AutoCAD format and relevant O&M manuals. The nature and extent of the design that IES anticipates it will receive from other firms under subcontract is outlined in the Subconsultant & Subcontractor Matrix Table “G” in Section 4.
5. Construction: Provide, or cause to be provided, all material, labor, and equipment, including paying for permits, fees, bonds, and insurance, required for the complete and working installation of IES provided equipment.
    a) IES may perform portions of the construction work, or may subcontract portions to qualified firms. The nature and extent of the work and equipment that IES anticipates it will receive from other contractors under subcontract is outlined in the Subconsultant & Subcontractor Matrix Table “G” in Section 4. In either case, IES will provide all information regarding actual costs of the work with the Client and DES Energy Program.
    b) When IES has completed the installation of the Equipment, including start-up and operation verification and training in accordance with the Proposal, IES shall provide to the Client and DES Energy Program a "Notice of Commencement of Energy Savings" which initiates the energy savings.
    c) At the conclusion of the last phase of the project, IES shall submit a "Notice of Substantial Completion" to the Client and DES Energy Program.
6. Construction Management: Provide construction management services to coordinate and supervise the work. The Client is expected to coordinate day-to-day communications with occupants and any scheduling of occupant relocations in and around occupied areas, if necessary.
7. Operation training: IES will provide:
    a) On-going training of building staff during construction.
    b) Owner training is provided both during the construction phase and the start-up phase, as appropriate, to provide the Client with the optimum hands-on experience prior to taking ownership of the systems. The proposed hours of training are indicated in the Preliminary Project Schedule “H” in Section 4.
    c) Site-specific operations and maintenance manuals.
    d) Site-specific as-built drawings.

8. Equipment Maintenance: IES will provide no equipment maintenance. Following the completion of the installation and Client and DES Energy Program acceptance of the Equipment, the Client shall provide all necessary equipment manufacture recommended service, adjustments and maintenance, to the Equipment so that the Equipment will perform in the manner and to the extent set forth in the Proposal. IES shall have no obligation to service or maintain the Equipment after Completion and Acceptance unless IES and the Client have entered into a separate maintenance agreement.

9. Warranty: IES shall have the following warranty responsibilities as outlined in Section 5.24 of the Washington State ESPC General Conditions:

   a) Obtain warranties: Obtain all warranties that would be given in normal commercial practice;

   b) Warranties for benefit of Owner: Require all warranties to be executed, in writing, for the benefit of Owner;

   c) Enforcement of warranties: Enforce all warranties for the benefit of Owner, if directed by Owner; and

   d) ESCO responsibility for Subcontractor warranties: Be responsible to enforce any Subcontractor's, manufacturer's, or supplier's warranties should they extend beyond the period specified in the Contract Documents.

   Equipment warranties shall be a minimum of one year. IES will endeavor to obtain an extended warranty or service agreement on the provided equipment and systems unless this additional cost causes the Maximum Project Amount to be exceeded.

10. Hazardous Waste: Disposal of waste materials shall conform to Section 5.20 of the Washington State ESPC General Conditions, included here for reference.

    " 5.20 DISPOSAL OF WASTE MATERIALS

    ESCO is responsible for disposal of hazardous materials generated by ESCO: Ordinary hazardous materials generated by the ESCO in pursuing the Work, such as used motor oils, lubricants, cleaners, etc. shall be disposed of according to the Contract Documents and according to local, State and Federal law.

    If during the course of the Work, ESCO unexpectedly encounters materials that it believes may be hazardous material, it shall immediately stop work on this activity and notify Owner. And, to the extent ESCO believes the encounter may entitle it to an adjustment in the Contract Time or Contract Sum, shall provide timely notice thereof in accordance with Part 7.03 Change in the Contract Sum and Part 7.04 Change in the Contract Time.

    Owner is solely responsible for and will retain title to all hazardous material that is on the Project Site as of the ESCO Construction Contract Notice to Proceed date and encountered during demolition, removal and excavation. Owner will be identified as the hazardous waste generator

and will sign all hazardous waste shipment manifests for non-ESCO generated hazardous wastes. Owner shall agree and acknowledge that it has not relied upon or employed ESCO to analyze or identify the presence of any hazardous substance on the Owner's premises. Nothing contained within the Contract Documents shall be construed or interpreted as requiring ESCO to assume the status of Owner of generator of hazardous wastes for non-ESCO generated hazardous wastes."

E. Project Costs Summary

The Client shall pay IES the Contract Sum for performance of the Work, in accordance with the Contract Documents. The Contract Sum shall be determined using the Open Book Pricing.

IES shall provide a Schedule of Values (Exhibit 2) at the conclusion of the construction bid phase. At a minimum, the schedule shall identify the costs of subcontractors, IES labor, direct purchase costs, bonds and insurance, start-up and commissioning expenses.

Items listed below are included in the Guaranteed Maximum Project Costs:

1. Development of the Investment Grade Audit Report and Energy Services Proposal.
2. Engineering design.
3. Construction management and construction supervision services.
4. Installation of IES Equipment including the following costs:
    a) The term Cost of the Work shall mean costs necessarily incurred in the proper performance of the work and paid by IES. Such costs shall be at prevailing wage rates in the locality of the Work.
    b) Cost of all materials, supplies, and equipment incorporated in the Work, including costs of transportation thereof.
    c) Payments made by IES to Subcontractors for Work performed pursuant to Subcontractors under this Agreement.
    d) Cost, including transportation and maintenance, of all materials, supplies, equipment, temporary facilities and job specific hand tools not owned by the workers.
    e) Rental charges of all necessary machinery and equipment, exclusive of hand tools, used at the site of the Work; whether rented from IES or others, including installation, minor repairs and replacements, dismantling, removal, transportation and delivery costs thereof; at rental charges consistent with those prevailing in the area.
    f) Cost of premiums for all bonds and insurance, which IES is required to purchase and maintain.

g) All taxes imposed by law and properly chargeable to the Project, including Washington state sales tax.

h) Permit fees, royalties, and deposits.

i) Cost of removal of all debris including disposal costs.

j) Cost of hazardous material removal and disposal if required as described above.

k) Other costs incurred in the performance of the Work if and to the extent approved in advance in writing by the Client and DES Energy Program.

l) The cost of construction financing, when applicable.

m) Cost of equipment startup, commissioning, and balancing performed by IES.

5. Payment and Performance Bond. The Bond shall specifically exclude coverage for those portions of the Energy Services Agreement and/or Energy Services Agreement Addendum pertaining to design services, energy savings guarantee, maintenance guarantee, utility incentives, efficiency guarantees, and any other clauses which do not relate specifically to construction management and supervision of work for purchasing and installing of ESCO Equipment, or for work to be accomplished by the Owner.

6. Start-up and training services.

7. Measurement and Verification services.

8. Permanent monitoring equipment to be installed on site.

F. IES Compensation

1. Progress Payments

a) Subject to review and approval by the Client and DES Energy Program, the Client may agree to progress payments for project costs to IES.

b) Monthly progress payments shall be based upon the total project value, plus Washington State Sales Tax, minus 5% retention. Payments will be as agreed upon by IES, the Client, and DES Energy Program.

c) Retention will be released within 45 days after receipt of all lien releases, L&I, Revenue and Employment Security certificates and releases by the Client. Use of contingency funds will increase progress payments accordingly. A retention bond may be provided (at IES expense) in place of the 5% retainage requirement if approved by Client and DES Energy Program.

2. Termination

d) Upon commencement of energy savings, the Client and DES Energy Program may at any time terminate this Agreement.

e) Any termination shall fully and finally terminate and extinguish all of the Client's rights and all IES obligations under this agreement.

G. Financing

The Client may elect IES to finance some or all of the project costs.

H. Energy Services Agreement

1. The term of the Energy Services Agreement shall be the number of years that Measurement & Verification is contracted.
2. The termination value for each year of the term is outlined in Table “E” in Section 4.
