Dear city council,

Reading the Redmond zero-carbon plan was very encouraging. In the Puget sound area, vehicles create a large portion of our carbon emissions and reducing vehicle miles traveled as well as electrification are good goals. Please also consider electrification of police vehicles, as many suitable options are now available. Also, small engines like lawnmowers and blowers produce an outsized amount of nitrogen oxides and ozone. Please consider switching over to electrified leaf blowers and mowers for municipal operations, or even requiring their use in public spaces.

Thanks
