Meeting of: City Council Type: Consent Item

N/A

Other Key Facts:

Management of stormwater runoff and the City's surface water resources is a principal function of the Public Works Department. The goals for stormwater and surface water management in Redmond are to:

- Fully meet all local, state, and federal requirements,
- Prevent flooding and ensure public safety,
- Protect and enhance stream health and promote natural aquatic system functions, and
- Protect groundwater quality and quantity through management of stormwater.

Management of stormwater and surface water is currently achieved through our Capital Investment and operations programs and is guided by several strategic and tactical plans (listed above). The SSWS Plan will provide an overarching plan that defines the objectives for stormwater and surface water management and articulates a comprehensive approach for achieving these objectives through coordinated implementation of the CIP, operations programs, and existing plans.

The City solicited statements of qualification from consulting firms and through this competitive procurement process the Altaterra Consulting team was selected as the best suited for this project.

We are requesting this item go forward for Council approval at the March 19, 2024, Business Meeting.

OUTCOMES:

The consultant would deliver a Stormwater and Surface Water System Plan document for adoption by the City Council. The plan would:

- Offer a single comprehensive resource guide for stakeholders, staff, and decision makers to achieve sustainable and adaptive stormwater and surface water management in the City of Redmond. To that end, serve as a functional plan as described in the Comprehensive Plan Capital Facilities Element.
- Align stormwater and surface water management programs and projects with others within the city (e.g., Transportation, Parks) and regionally (e.g., salmon recovery) to leverage resources and maximize multiple benefits.
- Support full compliance with applicable federal, state, and local regulations.
- Provide a systematic approach to identifying and prioritizing stormwater infrastructure asset improvement projects.
- Identify enhancements to address deficiencies in asset inventory data, tracking, and reporting.
- Evaluate current and needed City programs, projects, and staff levels to meet present and future service demands and regulatory requirements for surface water and stormwater management, including operations and maintenance, infrastructure planning, and environmental restoration/rehabilitation.
- Evaluate funding sources and fund utilization for surface water and stormwater management, including but not limited to grants and Stormwater Utility fee rates and revenue.

COMMUNITY/STAKEHOLDER OUTREACH AND INVOLVEMENT:

Timeline (previous or planned):

Community/stakeholder engagement will occur throughout the project starting in spring 2024.

Outreach Methods and Results:

A stakeholder engagement plan will be developed as part of this project. Engagement methods will include a survey, tabling at community events, stakeholder interviews, a project page on Let's Connect and social media

Time Constraints:

N/A

The timing would be such that the completed Plan would inform the 2027/2028 budget offers.

None proposed at this time

ANTICIPATED RESULT IF NOT APPROVED:

N/A

Date: 3/19/2024 File No. AM No. 24-038 Meeting of: City Council Type: Consent Item

Management of stormwater and surface water in Redmond would continue through the existing CIP process and multiple operational efforts without a formalized coordinating plan.
