FINDINGS/CONCLUSIONS

This traffic impact analysis has been prepared for the proposed LMC Marymoor project located at 17611 NE 70th Street in Redmond, WA. This is an update to our previous traffic analysis dated January 16, 2019 and addresses City of Redmond PREP 3 comments received January 30, 2019.

Project Proposal. The LMC Marymoor site is located within the Marymoor Design District 2 (MDD2) zone of Southeast (SE) Redmond, WA. The proposed project includes the development of 450 multi-family residential (apartment) units, up to 17,000 square feet (SF) of ground floor retail space, and a 20,000 SF daycare with a capacity of up to 248 students. The existing site is currently occupied by a total of approximately 13,190 SF on industrial and manufacturing uses. Vehicular access to the site would be provided at two locations; a new full access driveway on 176th Ave NE and a new full access driveway on NE 68th Street. The project is anticipated to be completed and occupied in 2022.

Trip Generation. The proposed LMC Marymoor development is estimated to generate 4,055 new weekday daily trips with 382 new trips occurring during the weekday AM peak hour (174 in, 208 out) and 405 new trips occurring during the weekday PM peak hour (216 in, 189 out).

Transportation Concurrency. A concurrency application is being submitted to the City of Redmond along with this traffic study. It is anticipated that the project will meet the City of Redmond's transportation concurrency requirements and be issued a certificate of concurrency.

2022 Traffic Operations Analysis. A level of service (LOS) analysis was conducted at ten off-site study intersections for weekday AM and PM peak hour conditions. Based on the results of the LOS analysis, there are several signalized study intersections along Redmond Way that are anticipated to operate at LOS E or LOS F without or with the proposed LMC Marymoor project in 2022 during the AM and PM peak hours. There are improvements planned by the City and/or Sound Transit at the majority of the LOS E/F intersections that will improve future operations at these intersections. At intersections that are anticipated to operate at LOS E/F in 2022 without planned improvements, the proposed LMC Marymoor project has insignificant impacts.

Site Access Analysis. Results of the LOS and queue analysis at the proposed site access locations on 176th Ave NE (at NE 69th Street and NE 68th Street) show that the controlled movements are expected to operate at LOS C or better with minimal vehicle queues during the weekday AM and PM peak hours in 2022.

2026 Analysis. Per the City's request, a LOS and queue analysis was conducted at the intersection of NE 70th Street/176th Ave NE and the site access locations for year 2026 AM and PM peak hour conditions with occupancy of the Sound Transit SE Redmond Station and with the LMC Marymoor project. Based on the results of the analysis, the future signalized intersection of NE 70th Street/176th Ave NE is anticipated to operate at LOS D or better during the AM and PM peak hours in 2026.

The results of the 2026 queuing analysis of the northbound approach at NE 70th Street/176th Ave NE show that it may be difficult for drivers to access 176th Ave NE from NE 69th Street during the peak hours. However, queuing from adjacent signalized intersections during peak hours in the Marymoor Village urban area is not unexpected and residents of the project will have alternate access to 176th Ave NE via NE 68th Street which will operate better than NE 69th Street.

Mitigation

Frontage & Roadway Improvements

Frontage/Roadway improvements are proposed to include the following:

NE 70th Street:

- 19' dedication for Type I street.
- Curb set to accommodate planned Sound Transit layout of NE 70th Street.
- New curb, gutter, sidewalk, landscaping with street trees, and street lighting along project frontage.

176th Ave NE:

- 21' dedication for Type I street.
- Removal of one existing driveway and replace with one new driveway curb-cut at approximately NE 69th Street.
- New curb, gutter, sidewalk, landscaping with street trees, street lighting, cycle track, and on-street parking along project frontage.

NE 68th Street:

- 36' dedication for new Type II street.
- New curb, gutter, sidewalk, landscaping with street trees, and street lighting along project frontage.

Non-Motorized Improvements

The LMC Marymoor project is designing NE 69th Street as a Type III "woonerf" Street that will provide a 40-foot shared space on-site for east/west non-motorized (pedestrian and bicycle) access through the site. Additionally, in the center of the project, a public multi-purpose trail connector is planned in the north/south direction between NE 69th Street and NE 68th Street through the site. Both of these on-site non-motorized improvements will provide pedestrian and bicycle connections to local and regional destinations, including Marymoor Park to the south, the East Lake Sammamish Trail and adjacent retail center to the east, and the future Sound Transit Light Rail Station to the northwest.

In addition to the on-site non-motorized improvements, the LMC Marymoor project proposes to construct two new crosswalks from their site to the regional East Lake Sammamish Trail through the existing King County parking lot located directly east of the LMC Marymoor site. One crosswalk would be located at approximately NE 69th Street and would connect to both the trail and the existing pathway to/from the Whole Foods retail shopping center and the second crosswalk would be located at approximately NE 68th Street.

The project is also constructing a cycle track on 176th Ave NE along the project frontage and new sidewalks on NE 70th Street, 176th Ave NE, and NE 68th Street along the project frontages.

The on-site non-motorized connections through the LMC site, the new crosswalks through the King County parking lot, the new cycle track on 176th Ave NE, and the new sidewalks that will be constructed along the project frontage will provide a pedestrian/bicycle grid connection to and through the site and the Marymoor Village area as intended by the City and will accommodate all pedestrian and bicycle trips between the LMC site, the East Lake Sammamish Trail, and the adjacent Whole Foods retail shopping center.

Off-Site Improvements

The applicant will construct a northbound right-turn lane at the intersection of NE 70th Street/176th Ave NE along their project frontage. Based on the results of the analysis shown in this report, no other project-specific off-site transportation mitigation is proposed for concurrency or SEPA purposes.

Transportation Impact Fees

Long-term traffic impacts in the City of Redmond are mitigated by the projects included in the City's Transportation Facilities Plan (TFP). The TFP projects are funded through the payment of City of Redmond transportation impact fees. Based on this process, a fee is assessed upon a development to pay for a proportionate share of the cost of public facilities needed to serve new growth and development.

The final impact fee calculation will be based on the rates and project size in effect at the time of building permit issuance. The project Applicant is working with the City on adjustments to the impact fee calculations to account for the anticipated reduced vehicular trip generation of the LMC Marymoor site as a result of being a TOD development located adjacent to the planned Sound Transit SE Redmond Station. Any applicable credits for transportation infrastructure will be addressed in the Development Agreement.

INTRODUCTION

This traffic impact analysis has been prepared for the proposed LMC Marymoor project located at 17611 NE 70th Street in Redmond, WA. This is an update to our previous traffic analysis dated January 16, 2019 and addresses City of Redmond PREP 3 comments received January 30, 2019.

Project Description

The LMC Marymoor site is located within the Marymoor Design District 2 (MDD2) zone of Southeast (SE) Redmond, WA. A vicinity map showing the location of the site and the surrounding area is included in **Figure 1**. The proposed project includes the development of 450 multi-family residential (apartment) units, up to 17,000 square feet (SF) of ground floor retail space, and a 20,000 SF daycare with a capacity of up to 248 students. The existing site is currently occupied by a total of approximately 13,190 SF on industrial and manufacturing uses.

Vehicular access to the site would be provided at two locations; a new full access driveway on 176th Ave NE and a new full access driveway on NE 68th Street. The project is anticipated to be completed and occupied in 2022. A preliminary site plan concept is shown in **Figure 2**.

Project Approach

The specific scope items used in the evaluation of traffic impacts were discussed and confirmed by City staff. To analyze the traffic impacts from the LMC Marymoor project, the following tasks were undertaken:

- Assessed existing conditions through field reconnaissance and reviewed existing planning documents.
- Described existing roads, nonmotorized transportation facilities, and transit facilities in the project vicinity.
- Documented traffic collisions in the project vicinity.
- Documented existing traffic volumes and intersection LOS during the weekday AM and PM peak hours.
- Documented future planned roadway improvements in the project vicinity.
- Developed weekday daily, AM, and PM peak hour trip generation estimates.
- Assigned weekday AM and PM peak hour project-generated trips onto a future road network with the NE 70th Street Extension.
- Analyzed weekday AM and PM peak hour LOS for future conditions without and with the project at the following study intersections:
 1. Redmond Way / 170th Ave NE (signalized)
 2. Redmond Way / NE 76th Street / SR 520 Westbound on-ramp (signalized)
 3. Redmond Way / SR 520 Eastbound off-ramp (signalized)
 4. Redmond Way / NE 70th Street (signalized)
 5. NE 70th Street / 176th Ave NE (northbound stop-controlled, future signal)

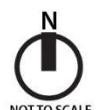

6. Redmond Way / E lk Sammamish Pkwy NE / 180th Ave NE (signalized)
 7. NE 65th Street / E lk Sammamish Pkwy NE (signalized)
 8. Redmond Way / 185th Ave NE (signalized)
 9. Redmond Way / 188th Ave NE (signalized)
 10. NE 76th Street / 180th Ave NE / 178th Ave NE (signalized)
- Analyzed the weekday AM and PM peak hour operations at the site access driveways on 176th Ave NE at NE 68th Street and NE 69th Street.
 - Documented proposed traffic mitigation including frontage/roadway improvements, non-motorized improvements, off-site improvements, and payment of transportation impact fees.

- Institute of Transportation Engineers (ITE), *Trip Generation Handbook*, 3rd Edition, 2017.
- WSDOT collision data, January 1, 2016 to December 31, 2018.
- 2018 AM and PM peak hour traffic counts, City of Redmond and All Traffic Data.
- City of Redmond 2019-2024 TIP and 2013-2030 TFP.
- *Highway Capacity Manual (HCM)*, 6th Edition, 2016.
- City of Redmond *Impact Fee Schedule*, effective January 1, 2019.

Figure 1: Project Site Vicinity

NOT TO SCALE

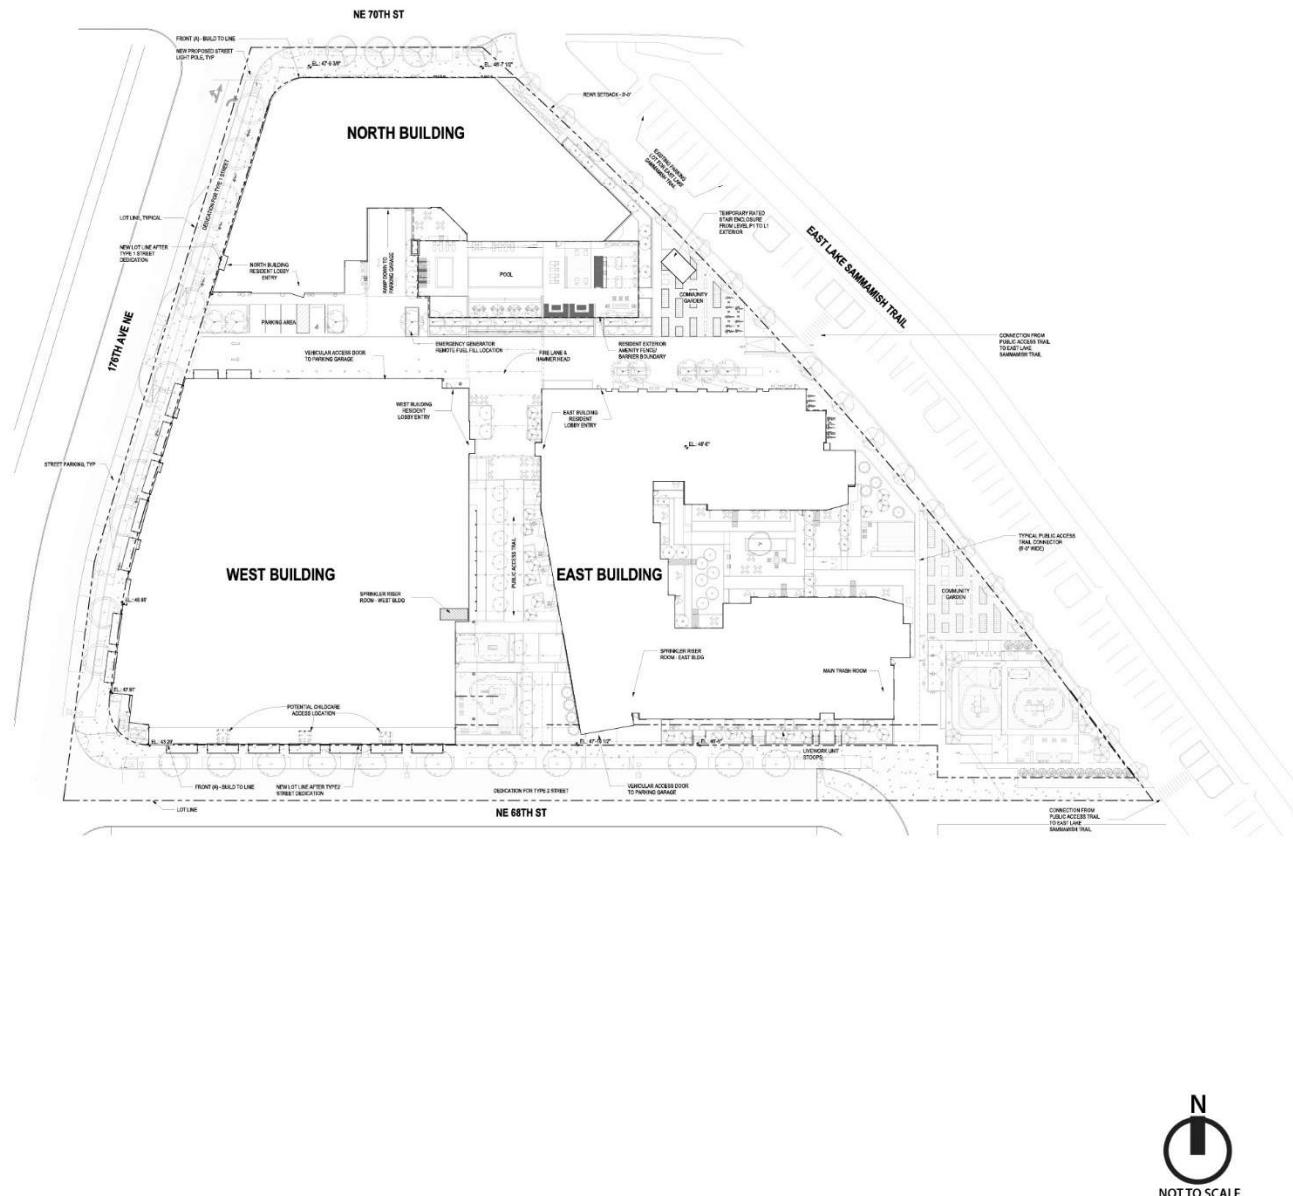

Figure 2: Preliminary Site Plan

EXISTING CONDITIONS

Roadway Network

Table 1 describes the existing characteristics of the streets that would be used as primary routes to and from the site. Roadway characteristics are described in terms of orientation, arterial classification, number of lanes, posted speed limits, parking, pedestrian facilities, and bicycle facilities. The relationship of these roadways to the project site is shown in **Figure 1**. An aerial view of the transportation network in the site vicinity is shown on the next page.

Table 1
Existing Study Area Roadway Network

Roadway	Orientation	Arterial Classification	# of Travel Lanes	Posted Speed Limit (mph)	Parking	Sidewalks	Bicycle Facilities
Redmond Way (SR 202)	E/W	Principal Arterial	5/6	30 to 45	No	Both Sides	Bike Lanes on South Side or Both Sides
E Lk Samm Pkwy	N/S	Minor Arterial	2	35	No	Both Sides	Bike Lanes on Both Sides
180 th Ave NE	N/S	Collector Arterial	2+	35	No	Both Sides	Bike Lanes on Both Sides
NE 70 th Street	E/W	Collector Arterial	2	30	No	intermittent	None
176 th Ave NE	N/S	Local Street (Planned Collector Arterial)	2	25	No	intermittent	None

+ includes center two-way left-turn lane (TWLTL)

Nonmotorized Transportation Facilities

Pedestrian facilities in the immediate project vicinity include sidewalks on the south side of NE 70th Street east of the East Lake Sammamish Trail, and sidewalks on both sides of Redmond Way. The East Lake Sammamish Trail is located directly east of the project site and provides a protected trail for pedestrians and bicycles. Other pedestrian facilities include curb ramps and crosswalks at signalized intersections.

Bicycle facilities in the project vicinity include bike lanes on both sides of 180th Ave NE and E Lk Sammamish Pkwy NE. There are also bike lanes on the south side of Redmond Way west of 180th Ave NE and on both sides of Redmond Way east of 180th Ave NE.

Transit Service

Transit service to and from the project vicinity is provided by King County Metro Transit and Sound Transit. The nearest public transit stops are located on the north side of Redmond Way at NE 70th Street and on the east side of 180th Ave NE at approximately NE 70th Street. The transit stop on Redmond Way provides access to the Redmond LOOP. The transit stop on 180th Ave NE provides

access to Metro Transit routes 216, 268, and 269. In addition, the Bear Creek Park & Ride is located approximately 2/3 mile north of the site at 7760 178th Ave NE.

Aerial View of Project Vicinity (2018)

Collision History

Intersection Collisions

Collisions at the study intersections were summarized for the most recent three-year period from January 1, 2016 to December 31, 2018. Collision data was provided by the Washington State Department of Transportation (WSDOT). Summaries of the total, yearly average, and collisions per million entering vehicles (MEV) are provided in **Table 2**. Summaries of collisions by type are provided in **Table 3**.

Table 2
Collision Data Summary, January 1, 2016 to December 31, 2018

Intersection	Number of Collisions					Estimated Daily Volumes AWDT ¹	Collisions per MEV ²
	2016	2017	2018	3-Year Total	Average Annual		
1. Redmond Way/170 th Ave NE	14	8	6	28	9.33	33,320	0.77
2. Redmond Way/NE 76 th St	4	2	5	11	3.67	37,520	0.27
3. Redmond Way/SR 520 off-ramp	2	4	15	21	7.00	38,300	0.50
4. Redmond Way/NE 70 th St	5	5	7	17	5.67	46,670	0.33
5. NE 70 th St/176 th Ave NE	0	0	0	0	0.00	5,110	0.00
6. Redmond Way/E Lk Samm/180 th	18	8	9	35	11.67	49,690	0.64
7. E Lk Samm/NE 65 th St	4	2	3	9	3.00	25,050	0.33
8. Redmond Way/185 th Ave NE	5	5	3	13	4.33	33,870	0.35
9. Redmond Way/188 th Ave NE	6	2	5	13	4.33	34,420	0.34
10. 180 th Ave NE/NE 76 th St	8	3	3	14	4.67	20,540	0.62

Source: WSDOT Collision Records.

¹ AWDT = Average Weekday Daily Traffic. Estimated daily volumes are based on 2018 PM volumes and a K-factor of 10.

² Collision rate per MEV = Collision rate per Million Entering Vehicles.

Table 3
Collision Data Summary by Type, January 1, 2016 to December 31, 2018

Intersection	3-Year Total Collisions	Average Annual Collision Rate	Approach Turn	Collision Type						
				Parked Veh/ Fixed Object	Sideswipe	Right Angle	Rear-end	Ped/Bike Involved	Other	
1. Redmond Way / 170 th Ave NE	28	9.33	8	0	6	5	8	1	0	
2. Redmond Way / NE 76 th St	11	3.67	0	1	3	3	3	1	0	
3. Redmond Way / SR 520 off-ramp	21	7.00	0	0	1	4	14	1	1	
4. Redmond Way / NE 70 th St	17	5.67	0	0	3	2	10	2	0	
5. NE 70 th St / 176 th Ave NE	0	0.00	0	0	0	0	0	0	0	
6. Redmond Way / E Lk Samm / 180 th	35	11.67	1	0	7	6	18	1	2	
7. E Lk Samm / NE 65 th St	9	3.00	3	0	0	1	3	1	1	
8. Redmond Way / 185 th Ave NE	13	4.33	0	1	2	4	5	0	1	
9. Redmond Way / 188 th Ave NE	13	4.33	0	1	1	6	5	0	0	
10. 180 th Ave NE / NE 76 th St	14	4.67	8	2	0	1	3	0	0	

Source: WSDOT Collision Records.

Intersection collision rates over 1.0 collision per MEV generally warrant further review to determine if any patterns exist. Based on the collision data shown in **Table 2**, all of the study intersections have a collision rate that is less than 1.0 collision per MEV.

Collisions on 176th Ave NE

TENW also reviewed the most recent 5-year collision history along the project frontage on 176th Ave NE between NE 70th Street and approximately NE 68th Street. The collision history was provided by WSDOT.

The collision records included one incident that occurred on 176th Ave NE 200 feet south of NE 70th Street. The collision records indicate that this collision was between a stopped vehicle parked illegally in the southbound direction and a vehicle travelling southbound.

With only one collision in the last 5 years near the location of the proposed LMC Marymoor site access driveways on 176th Ave NE, there are no existing safety issues or collision patterns that must be considered relative to the proposed accesses on 176th Ave NE.

Existing Traffic Volumes

Existing weekday AM and PM peak hour traffic volumes at the ten study intersections were based on counts conducted in 2018 by the City of Redmond and All Traffic Data. **Figure 3** and **Figure 4** illustrate the existing 2018 AM and PM peak hour traffic volumes at the study intersections. *It should be noted that per the request of the City, the peak hour eastbound and westbound volumes on Redmond Way between the SR 520 on-ramp and the SR 520 off ramp were balanced.*

Existing Level of Service

Per City of Redmond Traffic Study Phase 2 requirements, all signalized intersections impacted by 20 or more PM peak hour trips are required as study intersections. Based on the trip distribution and assignment shown later in **Figure 5** and our scoping discussions with the City of Redmond, an existing weekday AM and PM peak hour level of service (LOS) analysis was conducted at the following study intersections:

1. Redmond Way / 170th Ave NE (signalized)
2. Redmond Way / NE 76th Street / SR 520 Westbound on-ramp (signalized)
3. Redmond Way / SR 520 Eastbound off-ramp (signalized)
4. Redmond Way / NE 70th Street (signalized)
5. NE 70th Street / 176th Ave NE (northbound stop-controlled)
6. Redmond Way / E lk Sammamish Pkwy NE / 180th Ave NE (signalized)
7. NE 65th Street / E lk Sammamish Pkwy NE (signalized)
8. Redmond Way / 185th Ave NE (signalized)
9. Redmond Way / 188th Ave NE (signalized)
10. NE 76th Street / 180th Ave NE / 178th Ave NE (signalized)

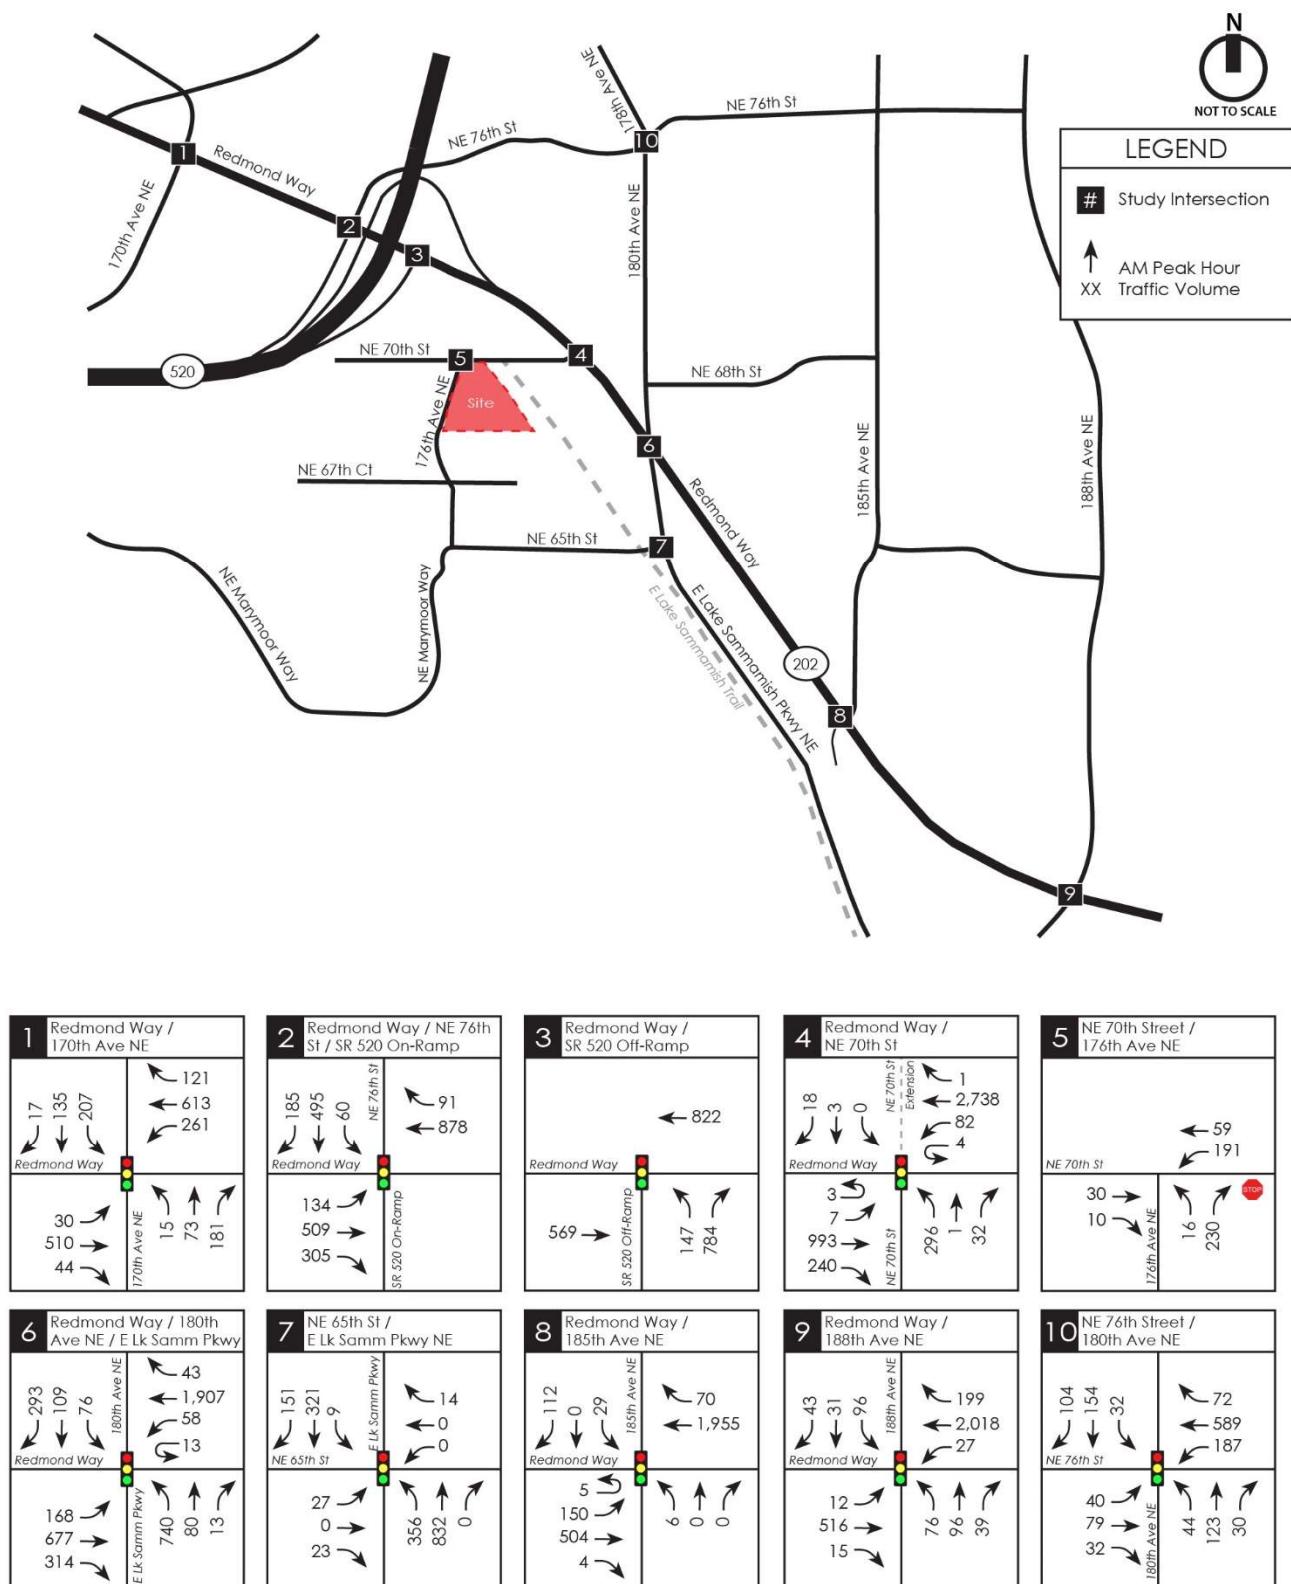

Figure 3: 2018 Existing AM Peak Hour Traffic Volumes

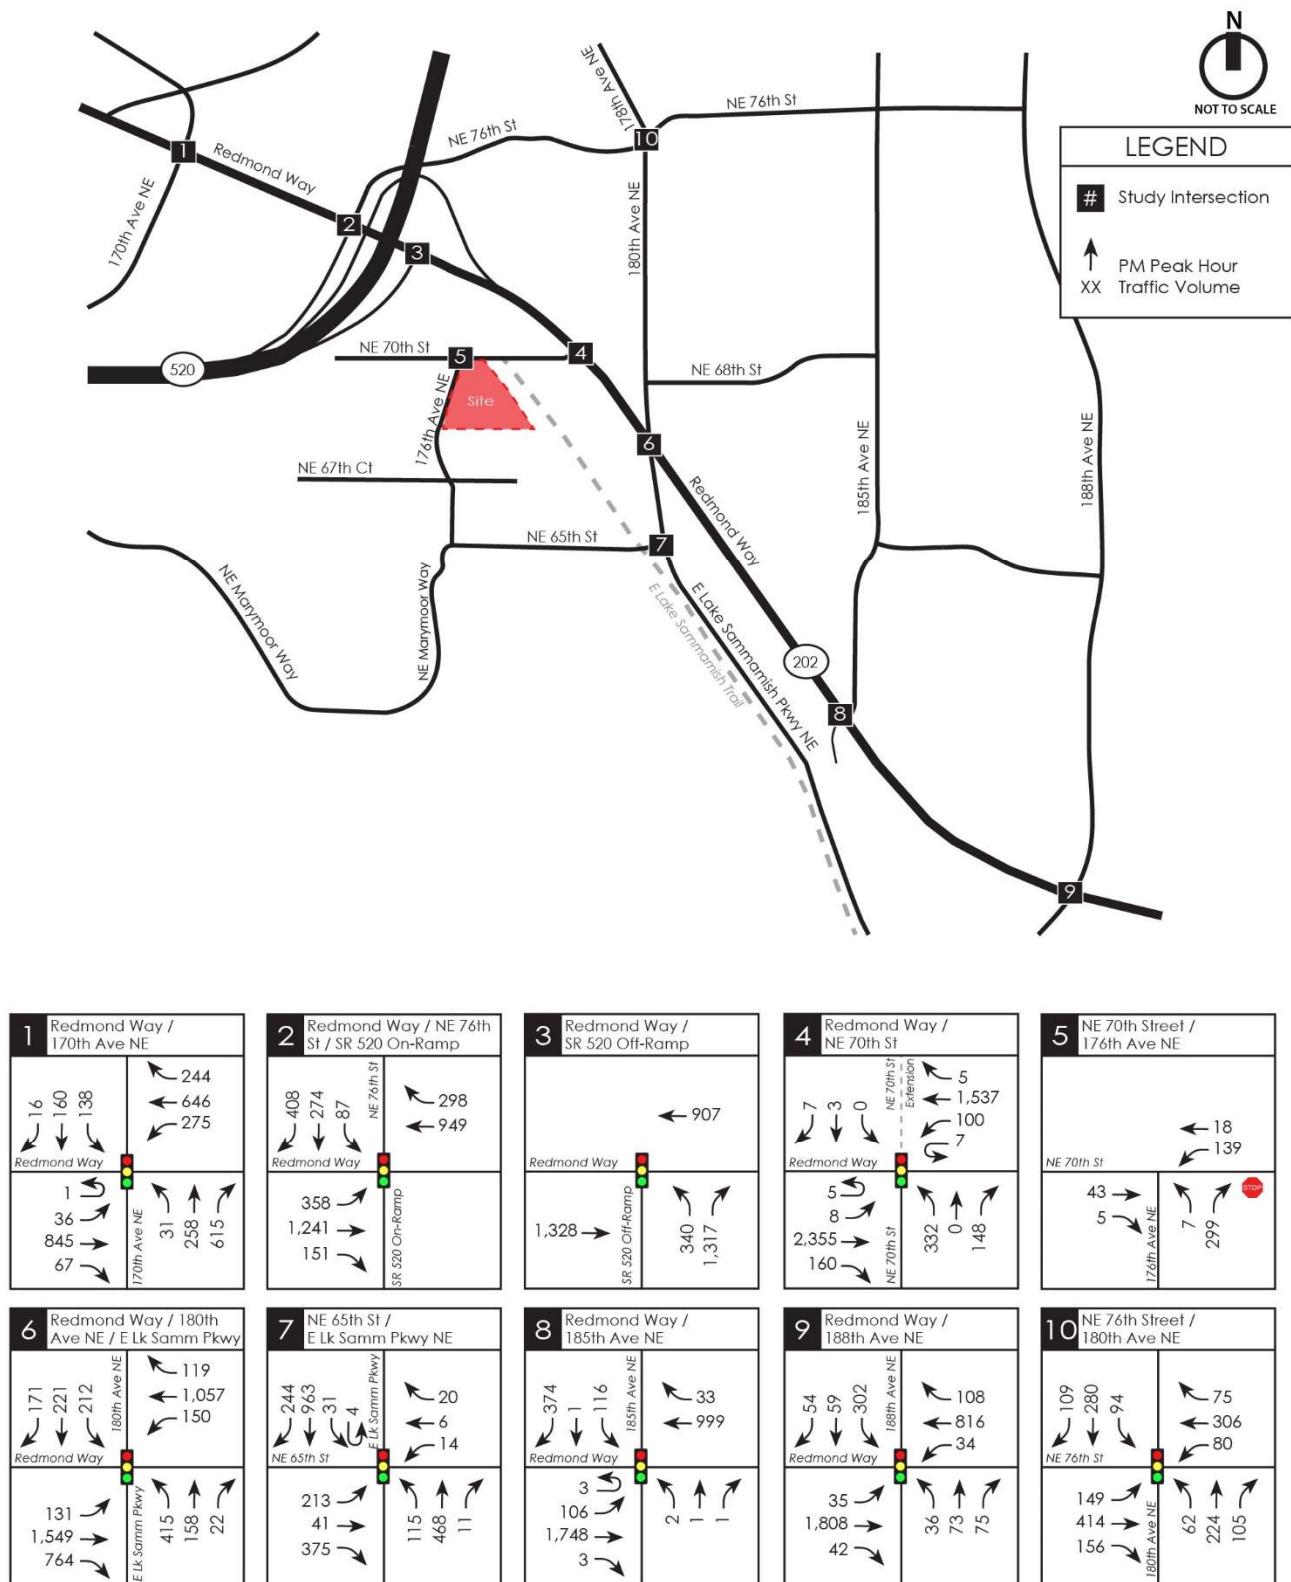

Figure 4: 2018 Existing PM Peak Hour Traffic Volumes

LOS generally refers to the degree of congestion on a roadway or intersection. It is a measure of vehicle operating speed, travel time, travel delays, and driving comfort. A letter scale from A to F generally describes intersection LOS. At signalized intersections, LOS A represents free-flow conditions (motorists experience little or no delays), and LOS F represents forced-flow conditions where motorists experience an average delay in excess of 80 seconds per vehicle.

The LOS reported for signalized intersections represents the average control delay (sec/veh) and can be reported for the overall intersection, for each approach, and for each lane group (additional v/c ratio criteria apply to lane group LOS only).

The LOS reported at stop-controlled intersections is based on the average control delay and can be reported for each controlled minor approach, controlled minor lane group, and controlled major-street movement (and for the overall intersection at all-way stop controlled intersections). Additional v/c ratio criteria apply to lane group or movement LOS only). **Table 4** outlines the current HCM (6th Edition) LOS criteria for signalized and stop-controlled intersections based on these methodologies.

Table 4
LOS Criteria for Signalized and Stop-Controlled Intersections¹

Control Delay (sec/veh)	SIGNALIZED INTERSECTIONS		STOP-CONTROLLED INTERSECTIONS		
	≤ 1.0	> 1.0	Control Delay (sec/veh)	≤ 1.0	> 1.0
≤ 10	A	F	≤ 10	A	F
> 10 to ≤ 20	B	F	> 10 to ≤ 15	B	F
> 20 to ≤ 35	C	F	> 15 to ≤ 25	C	F
> 35 to ≤ 55	D	F	> 25 to ≤ 35	D	F
> 55 to ≤ 80	E	F	> 35 to ≤ 50	E	F
> 80	F	F	> 50	F	F

¹ Source: Highway Capacity Manual (HCM), Transportation Research Board, 6th Edition, 2016.

² For approach-based and intersection-wide assessments at signals, LOS is defined solely by control delay.

³ For two-way stop controlled intersections, the LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or for the intersection as a whole at two-way stop controlled intersections. For approach-based and intersection-wide assessments at all-way stop controlled intersections, LOS is solely defined by control delay.

Level of service calculations for intersections were based on methodology and procedures outlined in the current HCM (6th edition) using *Synchro 10.3* traffic analysis software. Existing signal timing used in the analysis was provided by the City of Redmond and the Washington State Department of Transportation (WSDOT).

The 2018 existing weekday PM peak hour LOS analysis results at the ten study intersections are summarized in **Table 5**. The 2018 existing LOS worksheets are included in **Appendix A**.

Table 5
2018 Existing Peak Hour Level of Service Summary

Study Intersection / Movement	2018 Existing AM Peak Hour		2018 Existing PM Peak Hour	
	LOS	Delay (sec)	LOS	Delay (sec)
<u>Signalized Intersections</u>				
1. Redmond Way / 170 th Ave NE	C	29.3	D	49.9
2. Redmond Way / NE 76 th St / SR 520 on-ramp	E	60.6	C	33.7
3. Redmond Way / SR 520 Eastbound off-ramp	C	24.2	C	28.3
4. Redmond Way / NE 70 th Street	B	18.8	B	19.0
6. Redmond Way / E Lk Samm Pkwy / 180 th	E	64.4	E	72.5
7. NE 65 th Street / E Lk Samm Pkwy	B	11.1	C	25.8
8. Redmond Way / 185 th Ave NE	E	71.4	C	21.4
9. Redmond Way / 188 th Ave NE	F	88.0	C	30.5
10. NE 76 th Street / 180 th Ave NE / 176 th Ave NE	C	32.1	C	22.1
<u>Stop Controlled Intersections</u>				
5. NE 70 th Street / 176 th Ave NE				
Northbound Shared Left-Right (stop)	B	10.4	B	10.7
Westbound Left-Turn	A	7.7	A	7.6

AM Peak Hour

As shown in **Table 5**, all signalized study intersections and individual lane groups at the stop controlled study intersection are estimated to operate at LOS D or better during the AM peak hour with exception to the following:

- Redmond Way / NE 76th St / SR 520 on-ramp (#2) currently operates at LOS E.
- Redmond Way / E Lk Samm Pkwy NE (#6) currently operates at LOS E.
- Redmond Way / 185th Ave NE (#8) currently operates at LOS E.
- Redmond Way / 188th Ave NE (#9) currently operates at LOS F.

PM Peak Hour

As shown in **Table 5**, all signalized study intersections and individual lane groups at the stop controlled study intersection are estimated to operate at LOS D or better during the PM peak hour with exception to the signalized intersection of Redmond Way/E Lk Samm Pkwy/180th Ave NE which is estimated to operate at LOS E under 2018 existing conditions.

FUTURE CONDITIONS

Planned Transportation Improvements

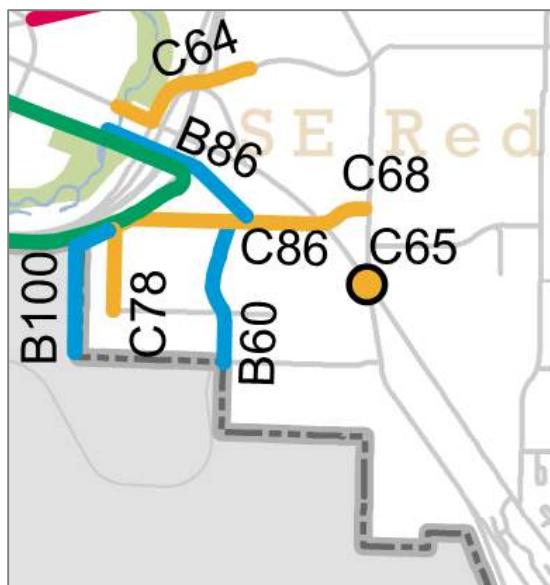

This section documents the known planned transportation improvements in the study area by Sound Transit (ST) and the City of Redmond.

Sound Transit East Link Extension

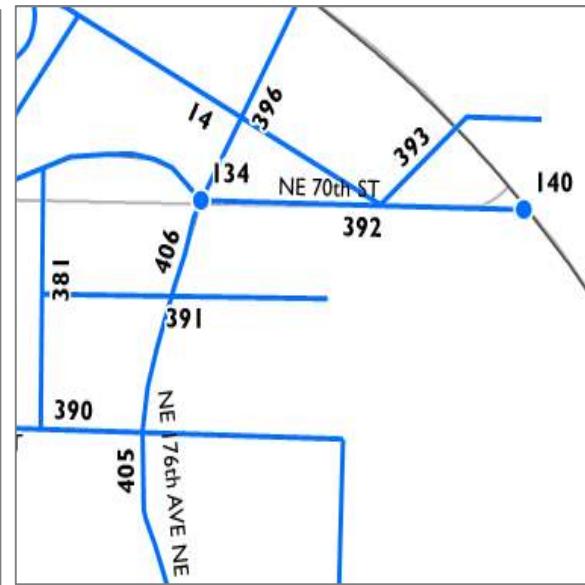

Sound Transit's Downtown Redmond East Link Extension project will extend light rail between Overlake and downtown Redmond with a station in SE Redmond located in the Marymoor Village subarea. The SE Redmond Station is anticipated to be complete in 2024 and will also provide additional local and regional bus transit by King County Metro Transit in addition to light rail. Plans for the SE Redmond Station include a 1,400-stall parking garage for park and ride use located on the north leg of the intersection of NE 70th Street/176th Ave NE. Sound Transit has identified multiple transportation improvements in the Marymoor Village subarea to mitigate the anticipated traffic impacts of the proposed SE Redmond Station. These mitigation improvements are being coordinated with the City of Redmond and include:

- Widening and improvement of NE 70th Street between 173rd Ave NE and Redmond Way
- Construction of a traffic signal at the intersection of NE 70th Street/176th Ave NE
- Construction of eastbound right-turn lane and second westbound left-turn lane on Redmond Way at NE 70th Street
- Construction of second eastbound left-turn lane at Redmond Way/NE 76th Street
- Extension of East Lake Sammamish Trail through SR 520 interchange area to connect with Redmond Central Connector.
- Intersection improvements at Redmond Way/E lk Samm Pkwy/180th Ave NE

Planned transportation improvement projects identified in the City of Redmond's current 2019-2024 TIP, 2013-2030 TFP, and 2013-2030 TMP Unfunded Buildout Plan are included below.

2019-2024 TIP Projects

2013-2030 TMP Projects

- **TIP #C64 (TFP #84) – Redmond Way Bridge Modifications and 76th Street Widening**
Description:
This project will add a second eastbound left-turn lane on Redmond Way and include associated widening on NE 76th Street to accommodate the dual left-turns from Redmond Way. The scheduled start of the project is 2024.
- **TIP #C65 (TMP #133 and #244) – Redmond Way and East Lake Samm Pkwy Intersection Improvements**
Description:
Increase capacity at Redmond Way/East Lake Sammamish Parkway by physically separating the eastbound right-turn from the westbound left-turn and by converting the northbound triple left-turns (on ELSP) to two left-turns and one through lane to better balance traffic between the three lanes. The pedestrian crossings would also be revised to provide one crossing at each leg of the intersection. The scheduled start of the project is 2021.
- **TIP #C68 (TFP #360) – NE 70th Street Improvements**
Description:
The project will complete the NE 70th Street Extension from Redmond Way to 180th Ave NE per the Marymoor subarea Plan. The scheduled start of the project is 2024.
- **TIP #C78 (TMP #378) – 173rd Ave NE Completion (NE 67th St to NE 70th St)**
Description:
The project will complete 173rd Ave NE from NE 67th Street to NE 70th Street per the Marymoor subarea Plan. The scheduled start of the project is 2024.
- **TIP #C86 (TMP #392) – 70th Street Improvements (Redmond Way to 173rd Ave NE)**
Description:
The project will construct new 70th Street from Redmond Way to the Marymoor Light Rail Station and 173rd Ave NE. Intersection improvements include an additional northbound left-turn lane on Redmond Way to 70th Street. The scheduled start of the project is 2020.
- **TIP #B60 – 176th Ave NE Sidewalk (NE 65th St to NE 70th St)**
Description:
The project will add sidewalk on 176th Ave NE between NE 65th and NE 70th Streets. The scheduled start of the project is 2023.
- **TIP #B86 – East Lake Sammamish Trail/RCC Connection (SR 520 Undercrossing)**
Description:
Provide grade separated trail through the SR 520/SR 202 Interchange area along the planned light rail alignment, connecting East Lake Sammamish Trail and Redmond Central Connector. Provide access to the planned Southeast Redmond light rail station. The scheduled start of the project is 2020.
- **TIP #B100 – SE Redmond Trail - ELST to Station to Marymoor Connector**
Description:
Construct a regional paved trail connecting the East Lake Sammamish Trail to the Southeast Redmond Light Rail Station to the Marymoor Park Trail per the Marymoor Infrastructure Report. The scheduled start of the project is 2024.

- **TMP #97 – East Lake Sammamish Pkwy from Redmond Way to 187th Ave NE**

Description:

Widen East Lake Sammamish Pkwy from Redmond Way to 187th Ave NE. Improvements include 1 through lane in each direction, left turn lanes where needed, bike lanes, curb, gutter, sidewalks, street lights, storm drainage, underground power, and right-of-way.

- **TMP #134 – NE 70th/176th Ave Truck Movement Enhancement**

Description:

Improve intersection geometry and traffic control for trucks and traffic at NE 70th Street/176th Ave NE.

- **TMP #393 – Redmond Way non-motorized crossing near SE Redmond Light Rail Station**

Description:

Consistent with the Southeast Redmond Neighborhood Plan, provide a non-motorized crossing of Redmond Way between the westbound SR 520 on-ramp and NE 70th Street that increases route directness to/from the Southeast Redmond light rail station and minimizes potential conflicts with vehicles.

- **TMP #390 – NE 68th St Connection**

Description:

Construct connector street from 173rd Ave NE to 177th Ave NE.

- **TMP #391 – NE 69th St Woonerf**

Description:

Construct woonerf-style local access facility from 175th Pl NE to 177th Ave NE.

Project Trip Generation

The proposed LMC Marymoor project includes the development of 450 multi-family residential (apartment) units, up to 17,000 square feet (SF) of ground floor retail space, and a 20,000 SF daycare with a capacity of up to 248 students. The existing site is currently occupied by a total of approximately 13,190 SF on industrial and manufacturing uses which would be removed with the proposed project.

Proposed Uses

The gross, unadjusted weekday daily, AM peak hour, and PM peak hour trip generation estimates for the proposed uses were based on the trip rates published in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 10th Edition for Land Use Code (LUC) 221 (Multifamily Housing – Midrise), LUC 820 (Shopping Center), and LUC 565 (Daycare). Adjustments to the gross trip generation of the proposed uses were made to account for internal trips and non-vehicle trips.

Internal and Non-Vehicle Trips. Reductions to the gross trip generation of the proposed mixed-use development were taken to account for internal trips and non-vehicle trips. The non-vehicle trips include walking, biking, and transit trips and are intended to reflect an anticipated reduction in vehicular trips for the LMC Marymoor site given its location in the Marymoor subarea and its proximity to the planned Sound Transit SE Redmond Station.

The internal and non-vehicle trip reduction for the proposed land use in the LMC Marymoor project was estimated based on the MXD+ methodology which takes a blended calculation of the MXD and

NCHRP calculation results for internal capture and adds in walk and transit travel reductions based on the MXD calculations. The MXD methodology was developed by the Environmental Protection Agency (EPA) in conjunction with the Institute of Transportation Engineers (ITE). The "EPA" method considers the site's size, mix of uses, and proximity to transit and employment to estimate the internal capture of trips within the mixed-use development (MXD) as well as estimates of off-site walking and transit usage for trips starting or ending in the mixed-use development.

The specific estimated MXD+ external vehicle trip reduction calculations for the LMC Marymoor site were 29% for weekday daily, 22% for weekday AM peak hour, and 29% for weekday PM peak hour. These external vehicle trip reductions were very similar to the calculations documented in the HDR *Marymoor Subarea Traffic Analysis* (27% for weekday daily, 30% for weekday AM peak hour, and 28% for weekday PM peak hour) which estimated internal and non-vehicle trips using only the MXD methodology. As a conservative estimate, and as approved in discussions with the City, a 20% reduction was applied to the proposed residential and retail uses and a 25% reduction was applied to the proposed daycare use for the weekday daily, AM peak hour, and PM peak hour trip generation estimates. The trip reductions account for internal trips and non-vehicle trips (walking/biking and transit) associated with the LMC Marymoor site being located in the Marymoor Village subarea and adjacent to the planned Sound Transit SE Redmond station and the East Lake Sammamish Trail. *Note that the 25% daycare trip reduction is intended to account for linked trips between the daycare and the Sound Transit SE Redmond Station and conservatively assumes no internal trip reductions between the daycare and the residential/retail uses on the LMC site.*

Pass-by Trips. Consistent with methodology and studies documented in the ITE *Trip Generation Handbook*, 3rd Edition, 2017, reductions in the vehicular trip generation of the retail use are typically taken to account for pass-by trips (after internal and non-vehicle adjustments). Pass-by trips are made by vehicles that are already on the adjacent streets and make intermediate stops at the site en route to a primary destination (i.e. on the way from work to home). Pass-by trips are trips that are diverted from the through movements on the adjacent streets, and therefore still impact operations at the site access points. *Based on discussions with the City, as a conservative measure, no pass-by trip reductions were included in the weekday daily, AM peak hour, or PM peak hour trip estimates.*

Trip Credit for Existing Uses

The applicant will receive trip generation credits for the existing industrial uses that will be demolished. Existing use trip generation estimates were based on ITE methodology for LUC 110 (General Light Industrial).

Net New Trips

The net new trips associated with the LMC Marymoor development were determined by subtracting the existing site trips from the proposed trips. A summary of the net new weekday daily, AM peak hour, and PM peak hour vehicular trip generation estimates for the LMC Marymoor project is shown in **Table 6**. A detailed trip generation estimate is included in **Attachment B**.

Table 6
Trip Generation Summary

Weekday Time Period	<u>Net New Trips Generated</u>		
	In	Out	Total
Weekday Daily	2,027	2,028	4,055
Weekday AM Peak Hour	174	208	382
Weekday PM Peak Hour	216	189	405

As shown in **Table 6**, the proposed LMC Marymoor development is estimated to generate 4,055 new weekday daily trips with 382 new trips occurring during the weekday AM peak hour (174 in, 208 out) and 405 new trips occurring during the weekday PM peak hour (216 in, 189 out).

Project Trip Distribution and Assignment

The distribution of trips generated by the proposed LMC Marymoor mixed-use project was estimated based previously approved residential projects and existing travel patterns in the vicinity of the site based on a review of existing traffic count data. The distribution of trips also assumes that the NE 70th Street Extension between Redmond Way and 180th Ave NE will be constructed and operational prior to occupancy of the proposed CVS project. The new AM and PM peak hour project-generated trips were generally distributed as follows:

- 10 percent to/from the west on Redmond Way
- 35 percent to/from the west on SR 520
- 10 percent to/from the east on Redmond Way
- 5 percent to/from the east on NE 68th St
- 15 percent to/from the south on East Lake Sammamish Parkway
- 15 percent to/from the north on 180th Ave NE
- 10 percent local within Marymoor Village

The distribution and assignment of the net new AM and PM peak hour project trips at the study intersections and site access driveways is illustrated in **Figure 5**.

Transportation Concurrency

A concurrency application is being submitted to the City of Redmond along with this traffic study. Using the information in the application, the City evaluates whether enough MUs from the six-year program and the Transportation Facility Plan (TFP) can be supplied to meet travel demand from the development at the time of opening, or within six years. If the MU supply is available to serve the MU demand from the development, the City will issue a certificate of concurrency. The current MU supply will accommodate the additional MU demand created by the proposed LMC Marymoor project. Therefore, it is anticipated that a certificate of concurrency will be issued for the project.

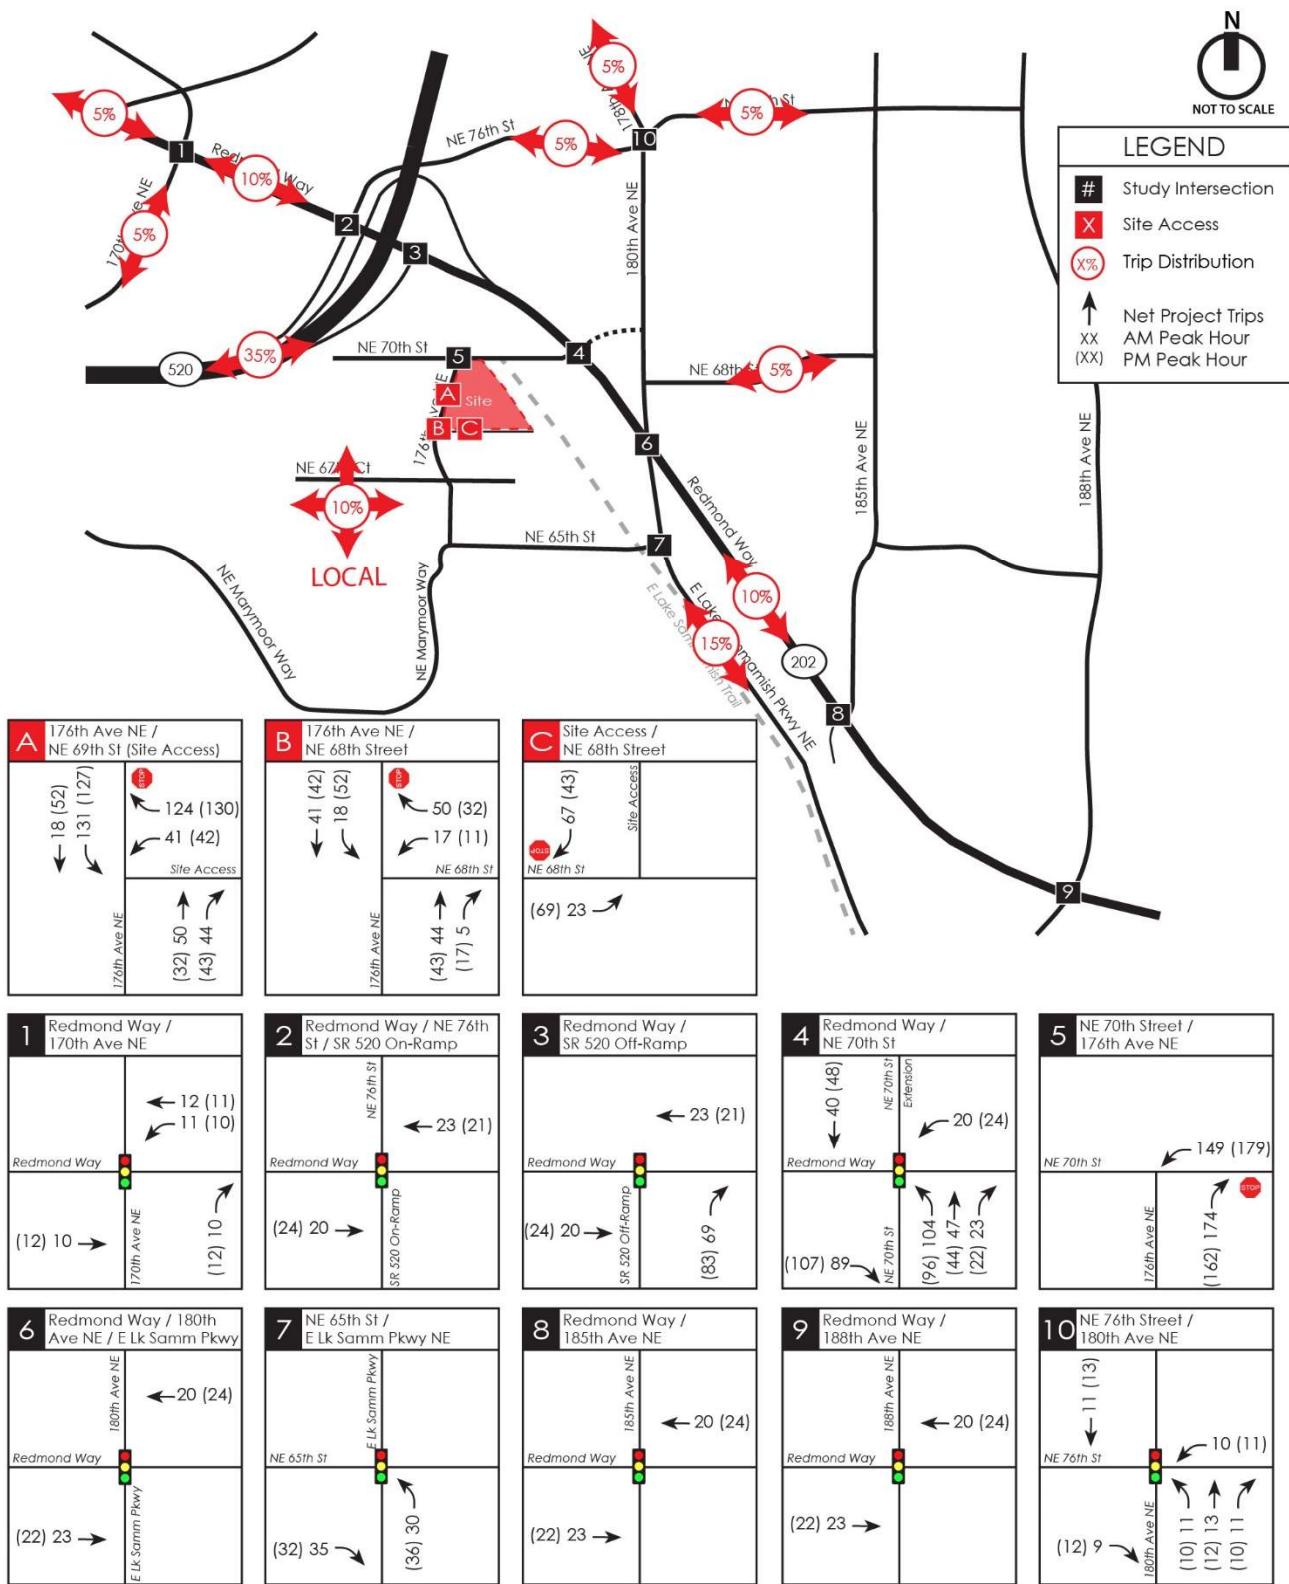

Figure 5: Peak Hour Project Trip Distribution and Assignment

Future 2022 Traffic Operations

Future Traffic Volumes

Future 2022 No Action Traffic Volumes with NE 70th Street Extension

To estimate the future 2022 No Action (without project) AM and PM peak hour traffic volumes, a 2 percent annual growth rate (based on the City's Phase 2 Traffic Study guidelines) was applied to the 2018 existing traffic volumes. In addition to the 2 percent annual background growth rate, trips from the following 5 pipeline projects (as directed by the City) were included in the future without-project traffic volumes:

- Alexan Marymoor
- Union Hill Car Wash
- Redmond Driver's Club/Metro AutoPark
- Bond Apartments
- CVS Pharmacy

The NE 70th Street Extension project between Redmond Way and 180th Ave NE is proposed to be constructed in conjunction with the CVS Pharmacy pipeline project. Although the City's TIP assumes the NE 70th Street Extension would be completed in 2024, it was assumed to be completed for the future year 2022 analysis documented in this traffic study. The redistribution of background traffic associated with the new NE 70th Street Extension was estimated based on adjustments documented in the *Woodspring Suites Traffic Impact Study* (Gibson Traffic Consultants, 2015) which were based on volume forecasts documented in the City of Redmond's *NE 70th Street Extension Study* (W&H Pacific). **Figure 6 and Figure 7** illustrate the future 2022 No Action AM and PM peak hour traffic volumes with the NE 70th Street Extension at the study intersections.

Future 2022 Traffic Volumes With-Project

To estimate the future year 2022 with-project traffic volumes, the new project-generated trips which are shown in **Figure 5** were added to the future 2022 No Action volumes with the NE 70th Street Extension (see **Figure 6 and Figure 7**) to obtain future with-project traffic volumes. The resulting total 2022 with-project AM and PM peak hour traffic volumes (with the NE 70th Street Extension) at the study intersections and site access driveways are shown in **Figure 8 and Figure 9**.

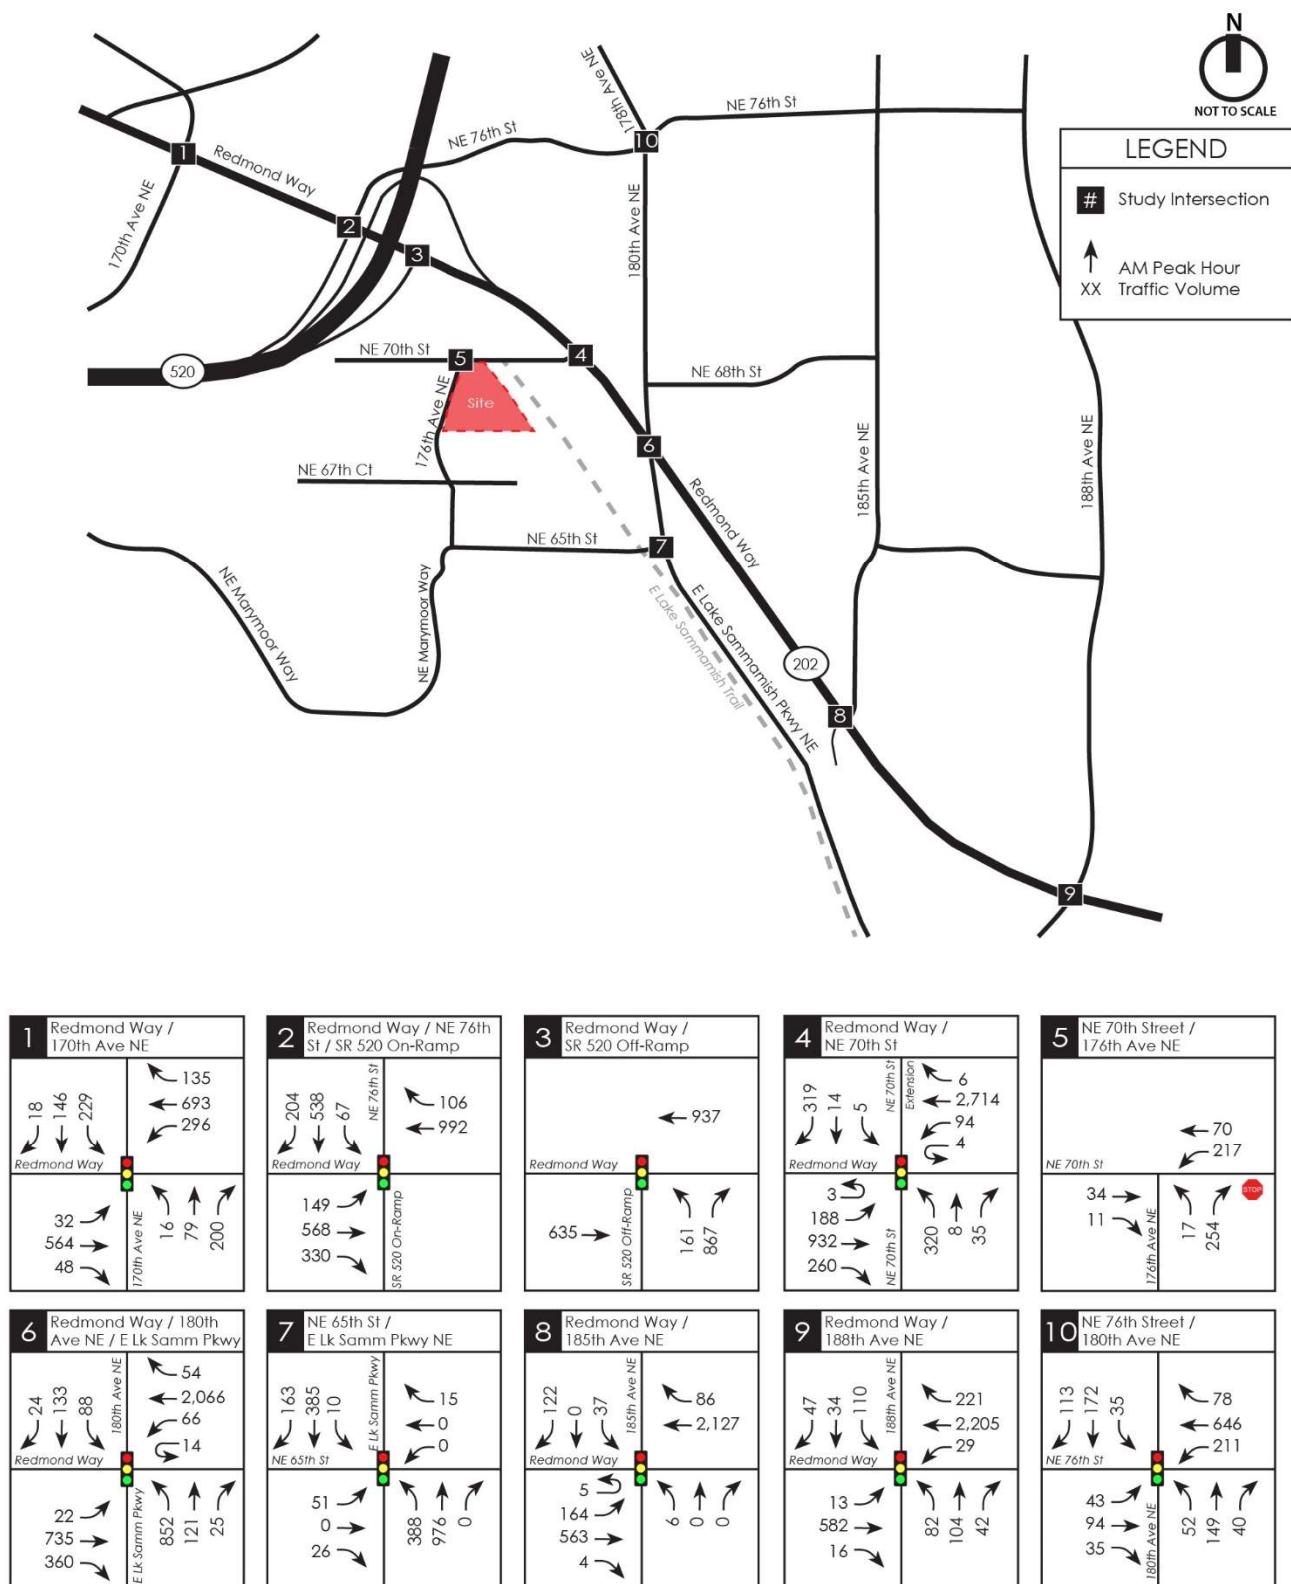

Figure 6: 2022 No Action AM Peak Hour Traffic Volumes

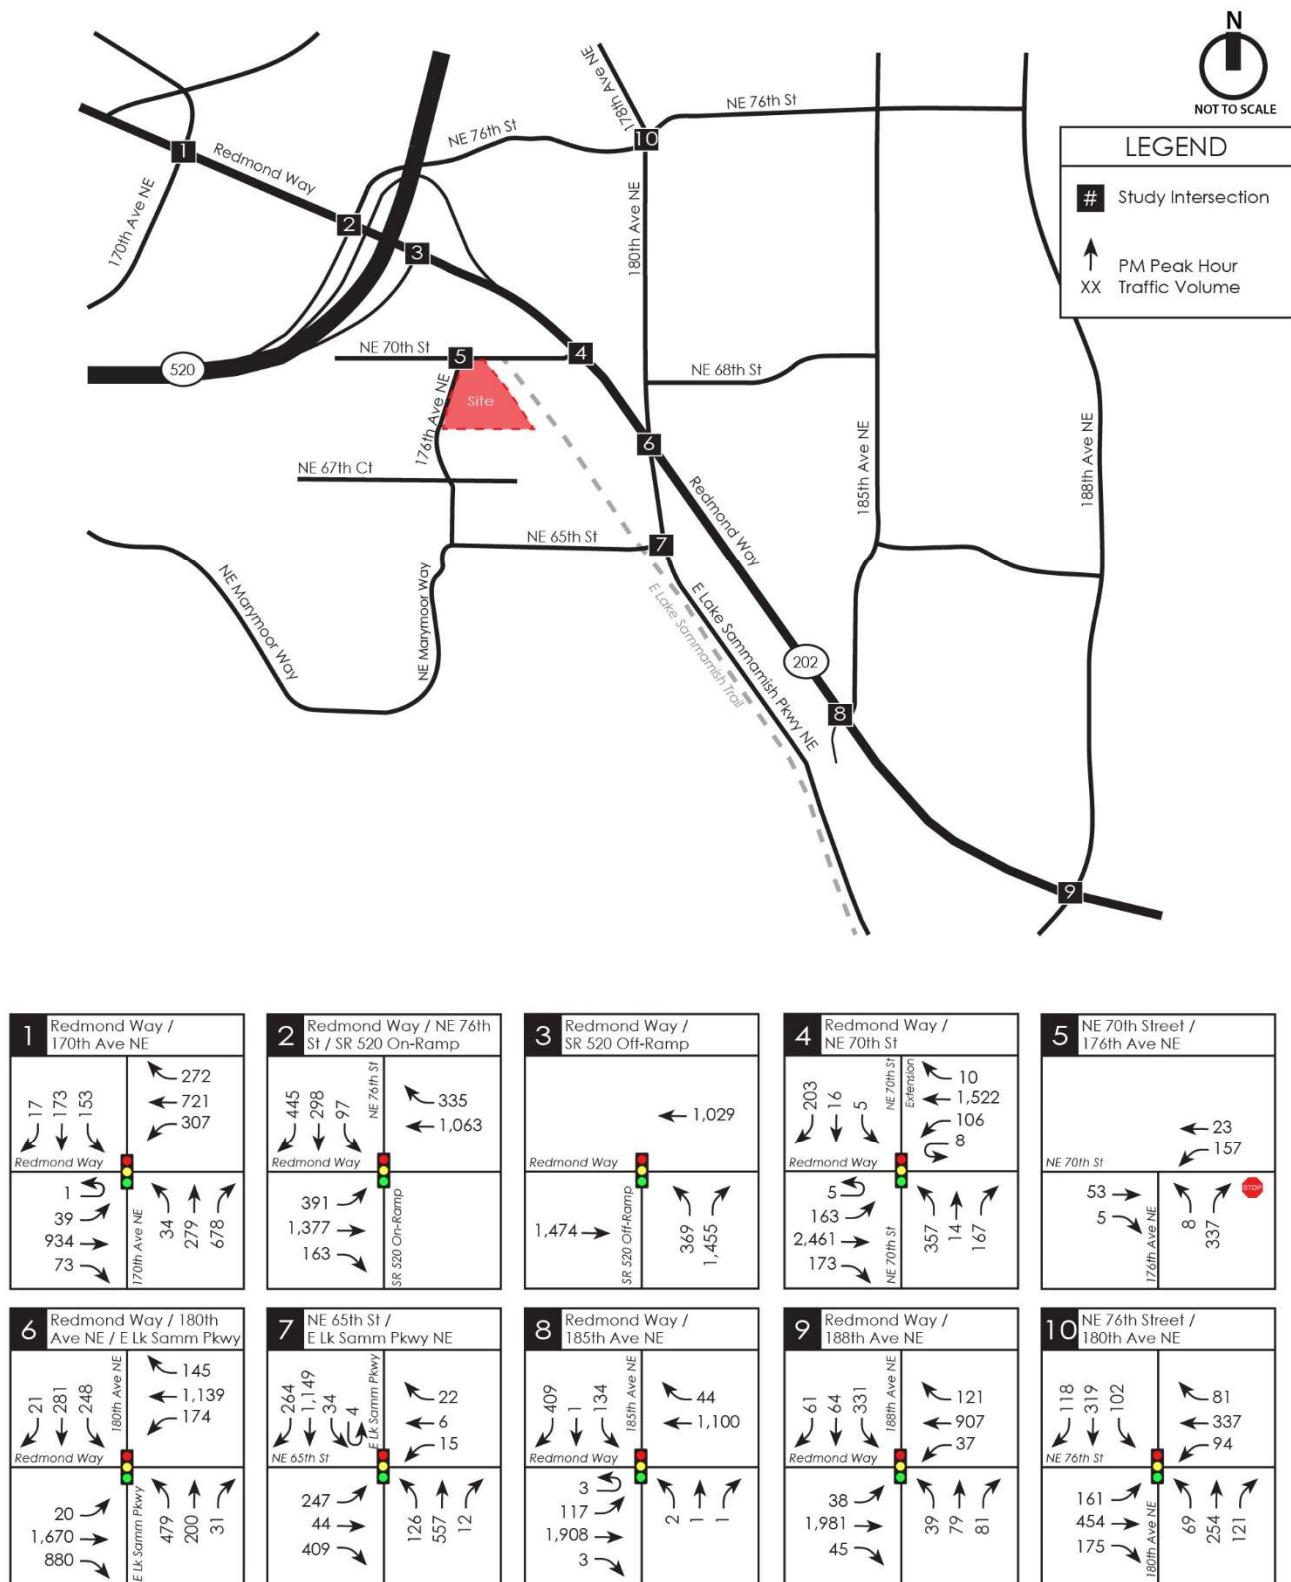

Figure 7: 2022 No Action PM Peak Hour Traffic Volumes

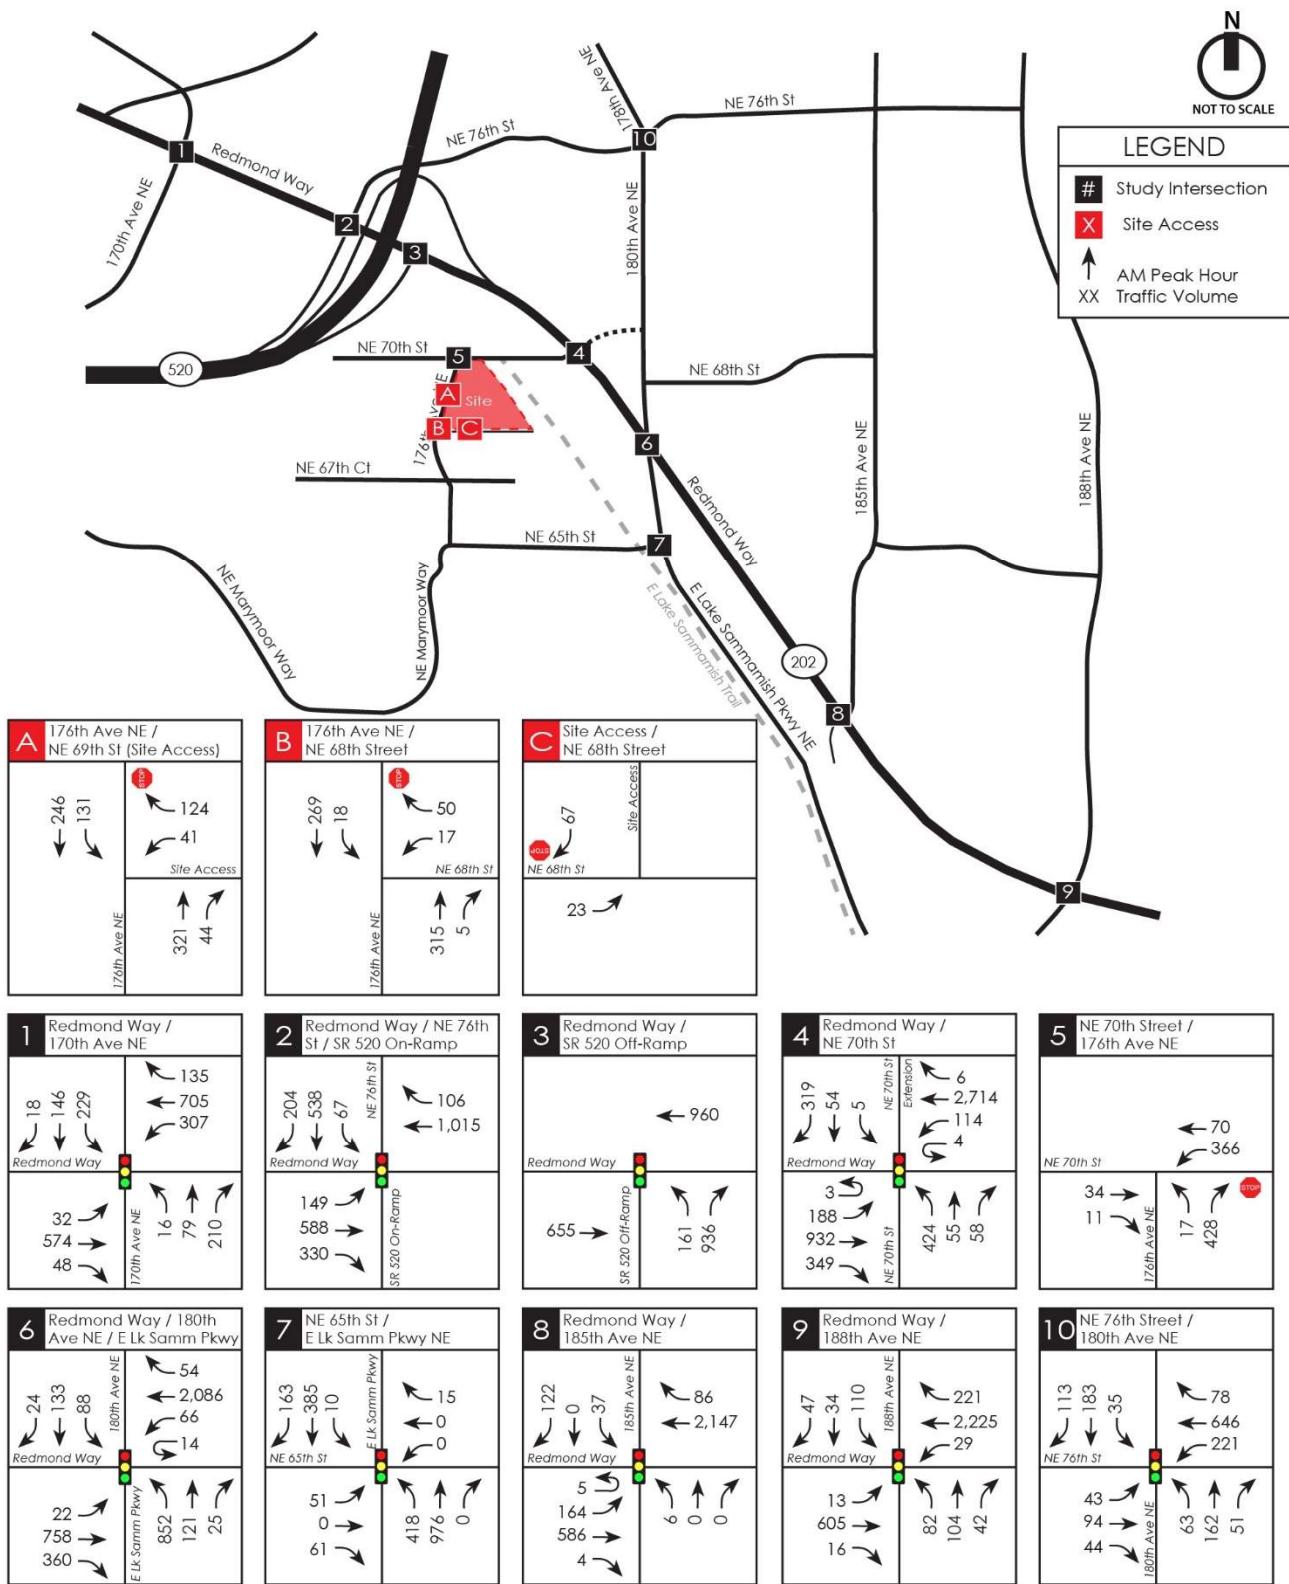

Figure 8: 2022 With Project AM Peak Hour Traffic Volumes

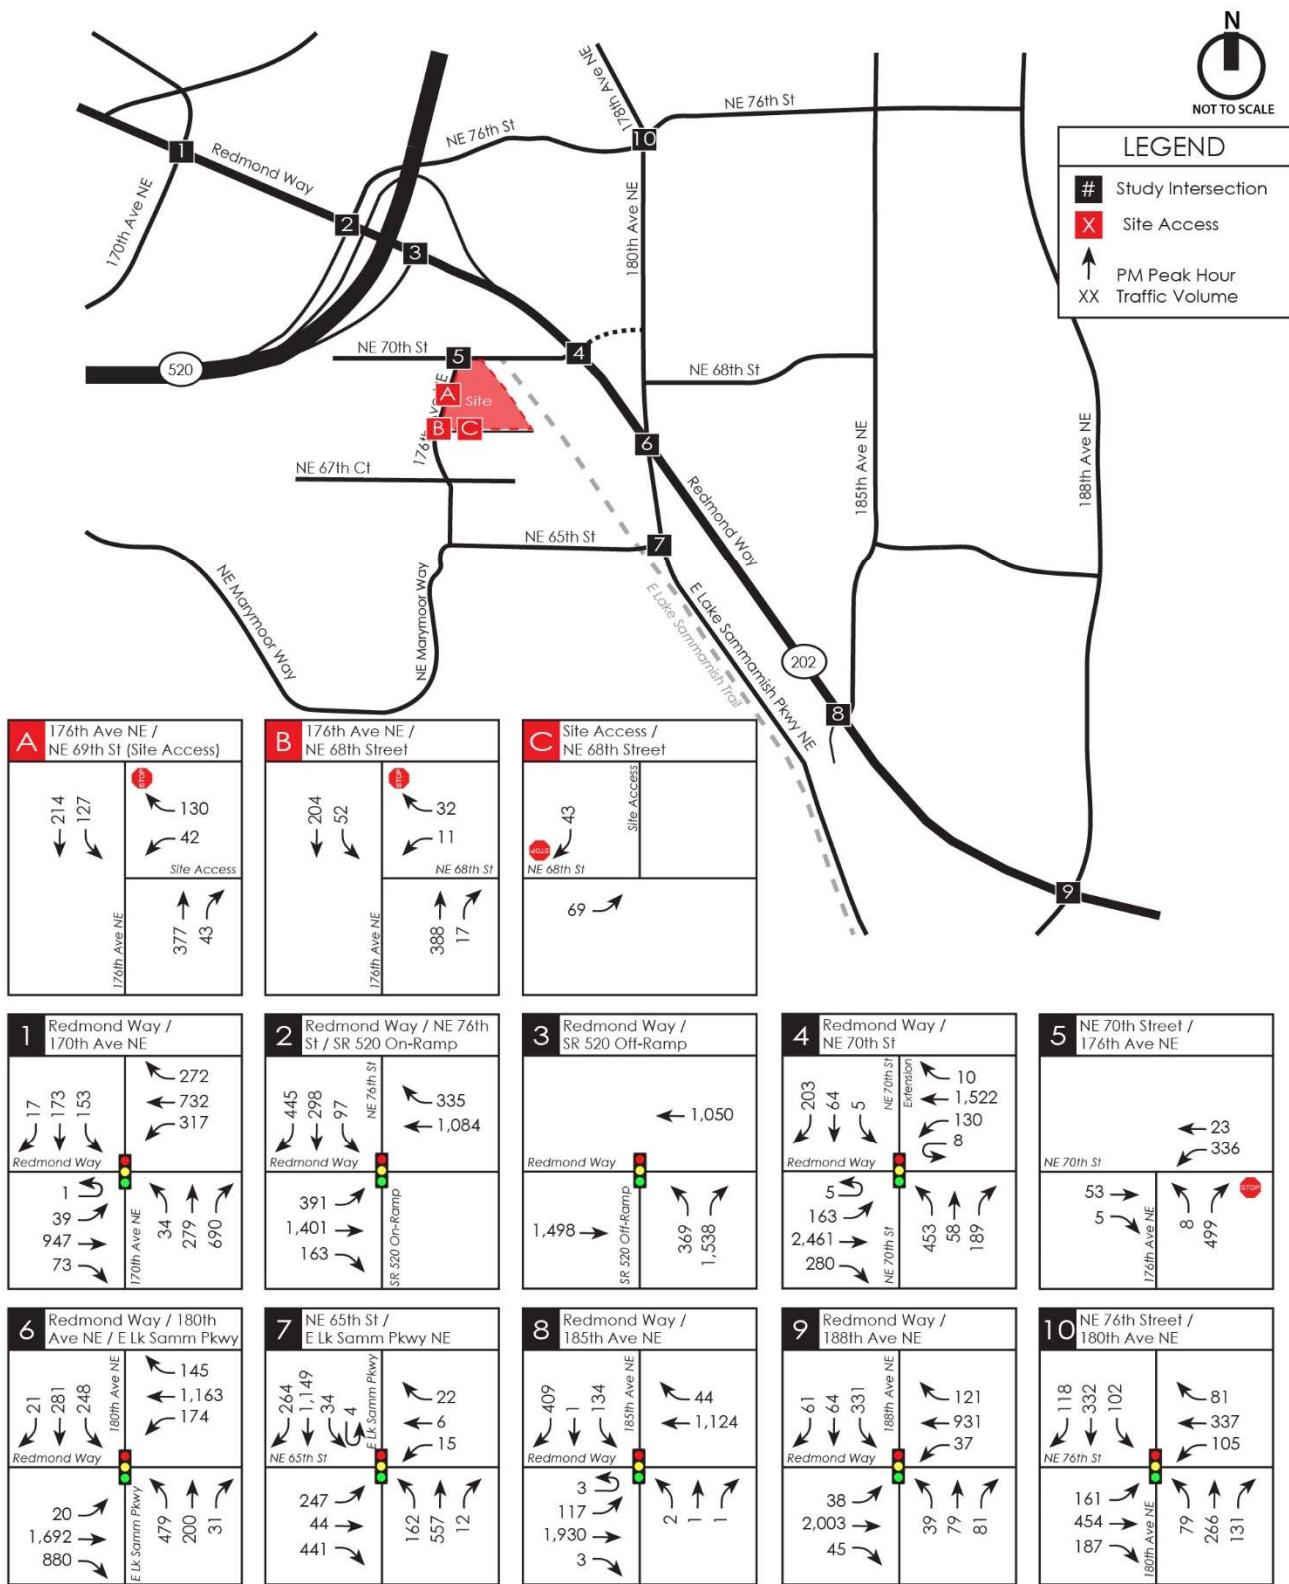

Figure 9: 2022 With Project PM Peak Hour Traffic Volumes

Future Level of Service

A future Level of Service (LOS) analysis was conducted at the ten study intersections for weekday AM and PM peak hour No Action (without project) conditions and for future with-project conditions.

The channelization and signal timing assumptions for the future year 2022 LOS analyses were consistent with existing conditions, except at the intersection of Redmond Way/NE 70th Street where the channelization and signal timing assumptions for the future year 2022 with-project LOS analyses assume the NE 70th Street Extension between Redmond Way and 180th Ave NE is completed. Therefore, the future year 2022 analysis at Redmond Way/NE 70th Street (#4) includes new channelization for the southbound approach, protected northbound and southbound left-turn phasing, and optimized splits.

The future weekday AM peak hour LOS results at the study intersections with and without the proposed LMC Marymoor project are summarized in **Table 7** and the PM peak hour LOS results at the study intersections without and with the proposed LMC Marymoor project are summarized in **Table 8**. The LOS worksheets are included in **Appendix A**.

Table 7
Future 2022 AM Peak Hour Level of Service Summary

Study Intersection / Movement	2022 No Action AM Peak Hour		2022 With-Project AM Peak Hour

AM Peak Hour

As shown in **Table 7**, all signalized study intersections and individual lane groups at the stop controlled study intersection are estimated to operate at LOS D or better during the AM peak hour in 2022 without or with the proposed LMC Marymoor project with exception to the following:

- Redmond Way / NE 76th St/SR 520 on-ramp (#2) is anticipated to operate at LOS E.
- Redmond Way / NE 70th Street (#4) is anticipated to operate at LOS F.
- Redmond Way / E Lk Samm Pkwy NE (#6) is anticipated to operate at LOS F.
- Redmond Way / 185th Ave NE (#8) is anticipated to operate at LOS F.
- Redmond Way / 188th Ave NE (#9) is anticipated to operate at LOS F.

PM Peak Hour

As shown in **Table 8**, all signalized study intersections and individual lane groups at the stop controlled study intersection are estimated to operate at LOS D or better during the PM peak hour in 2022 without or with the proposed LMC Marymoor project with exception to the following:

- Redmond Way / 170th Ave NE (#1) is anticipated to operate at LOS E.
- Redmond Way/E Lk Samm Pkwy/180th Ave NE (#6) is estimated to operate at LOS F.

The specific study intersections that are anticipated to operate at LOS E or LOS F in 2022 without or with the proposed LMC Marymoor project are discussed in more detail below.

Redmond Way / 170th Ave NE (#1)

The intersection of Redmond Way/NE 76th Street/SR 520 WB on-ramp (#2) is anticipated to operate at LOS E during the PM peak hour in 2022 without or with the proposed project. The vehicular delay is anticipated to increase by only 1.2 seconds per vehicle as a result of the additional 45 PM peak hour trips that the proposed LMC Marymoor project is estimated to add to the intersection (LMC project traffic = 1.2 percent of total traffic).

Redmond Way / NE 76th Street / SR 520 WB on-ramp (#2)

The intersection of Redmond Way/NE 76th Street/SR 520 WB on-ramp (#2) is anticipated to operate at LOS E during the AM peak hour in 2022 without or with the proposed project. The LMC Marymoor project is estimated to add 43 AM peak hour trips to the intersection (LMC project traffic = 1.4 percent of total traffic). The City's TIP (Project #C64) identifies planned improvements at this intersection that include the construction of a second eastbound left-turn lane on Redmond Way and associated widening on NE 76th Street to accommodate the dual left-turns from Redmond Way. These improvements will improve future operations at the intersection. Sound Transit is committed to completing these improvements with the SE Redmond station project.

Redmond Way / NE 70th Street (#4)

The intersection of Redmond Way/NE 70th Street (#4) is anticipated to operate at LOS F during the AM peak hour in 2022 without or with the proposed project. The LMC Marymoor project is estimated to add 323 AM peak hour trips to the intersection (LMC project traffic = 6.2 percent of total traffic). The City's TIP (Project #C86) and Sound Transit's design plans identify planned improvements at this intersection that include the addition of an eastbound right-turn lane on Redmond Way and the addition of a second westbound left-turn lane on Redmond Way. These improvements will improve future operations at the intersection. Sound Transit is committed to completing these improvements with the SE Redmond station project.

Redmond Way/E lk Samm Pkwy/180th Ave NE (#6)

The intersection of Redmond Way/E lk Samm Pkwy/180th Ave NE (#6) is anticipated to operate at LOS F during the AM and PM peak hours in 2022 without or with the proposed project. The vehicular delay is anticipated to increase by 14.6 seconds per vehicle during the AM peak as a result of the additional 43 AM peak hour trips that the proposed LMC Marymoor project is estimated to add to the intersection (LMC project traffic = 0.9 percent of total traffic). Also, the vehicular delay is anticipated to increase by 5.4 seconds per vehicle during the PM peak as a result of the additional 46 PM peak hour trips that the proposed LMC Marymoor project is estimated to add to the intersection (LMC project traffic = 0.9 percent of total traffic). The City's TIP (Project #C65) identifies planned improvements at this intersection that include physically separating the eastbound right-turn from the westbound left-turn, converting the channelization on the northbound approach to two left-turns and a through lane, and revising the pedestrian crossings. These improvements will be jointly funded by the City and Sound Transit and will improve both operations and safety at the intersection.

Redmond Way / 185th Ave NE (#8)

The intersection of Redmond Way / 185th Ave NE (#8) is anticipated to operate at LOS F during the AM peak hour in 2022 without or with the proposed project. The vehicular delay

is anticipated to increase by only 3.0 seconds per vehicle as a result of the additional 43 PM peak hour trips that the proposed LMC Marymoor project is estimated to add to the intersection (1.4 percent project traffic to total traffic).

Redmond Way / 188th Ave NE (#9)

The intersection of Redmond Way / 188th Ave NE (#9) is anticipated to operate at LOS F during the AM peak hour in 2022 without or with the proposed project. The vehicular delay is anticipated to increase by only 2.8 seconds per vehicle as a result of the additional 43 PM peak hour trips that the proposed LMC Marymoor project is estimated to add to the intersection (1.2 percent project traffic to total traffic).

Site Access Analysis

To evaluate the operations of the proposed site access driveways, a level of service (LOS) and queue analysis was completed.

As shown in **Figure 2**, vehicular access to the LMC Marymoor site would be provided at two locations: (1) a new full access driveway on 176th Ave NE, and (2) a new full access driveway on NE 68th Street. *It should be noted that a LOS calculation was not conducted at the residential site access driveway on NE 68th Street since NE 68th Street will be a dead-end street and the LMC Marymoor project trips will be the only volumes on NE 68th Street at year of opening (2022). Therefore, a LOS calculation was completed at the two-way stop controlled intersection of 176th Ave NE/NE 68th Street instead.*

The weekday AM and PM peak hour LOS and queue analysis at the site access locations were based on the methodology outlined in the 6th Edition of the *Highway Capacity Manual*/using Synchro 10.0 software. The estimated future weekday AM and PM peak hour traffic volumes with the proposed project at the site driveways are shown in **Figure 8** and **Figure 9**. **Table 9** summarizes the calculated LOS and the 95th percentile queues at the controlled movements at the proposed site access driveways during the weekday AM and PM peak hours. The reported 95th percentile queues represent a condition that is exceeded only 5 percent of the time. Detailed LOS and queue calculation worksheets are included in **Appendix A**.

Table 9
Future 2022 Peak Hour Site Access Level of Service and Queuing

Site Access Controlled Movements	2022 With Project		
	LOS	Delay (sec)	95 th Percentile Queue (ft) ¹
AM Peak Hour			
A. 176 th Ave NE / NE 69 th St (Site Access)			
Southbound Left (entering)	A	8.6	< 25'
Westbound Left-Right (exiting)	C	17.0	50'
B. 176 th Ave NE / NE 68 th St (Site Access)			
Southbound Left (entering)	A	8.0	< 25'
Westbound Left-Right (exiting)	B	11.9	< 25'
PM Peak Hour			
A. 176 th Ave NE / NE 69 th St (Site Access)			
Southbound Left (entering)	A	8.7	< 25'
Westbound Left-Right (exiting)	C	18.4	50'
B. 176 th Ave NE / NE 68 th St (Site Access)			
Southbound Left (entering)	A	8.4	< 25'
Westbound Left-Right (exiting)	B	12.6	< 25'

1. Queues are 95th Percentile queues. <25' indicates 95th Percentile queue statistically less than 1 veh.

As shown in **Table 9**, based on our analysis, the controlled movements at the proposed site access locations on 176th Ave NE (at NE 69th Street and NE 68th Street) are expected to operate at LOS C or better with minimal vehicle queues during the weekday AM and PM peak hours in 2022.

Future 2026 Traffic Operations

The Sound Transit (ST) SE Redmond Light Rail Station is anticipated to be operational in 2024, two years after the anticipated completion of the LMC Marymoor project. Per the request of the City, a future year Level of Service (LOS) and queue analysis was conducted at the study intersection of NE 70th Street/176th Ave NE (#5) and at the site access locations for weekday AM and PM peak hour conditions in 2026 with the Sound Transit SE Redmond Light Rail Station and with the LMC Marymoor project.

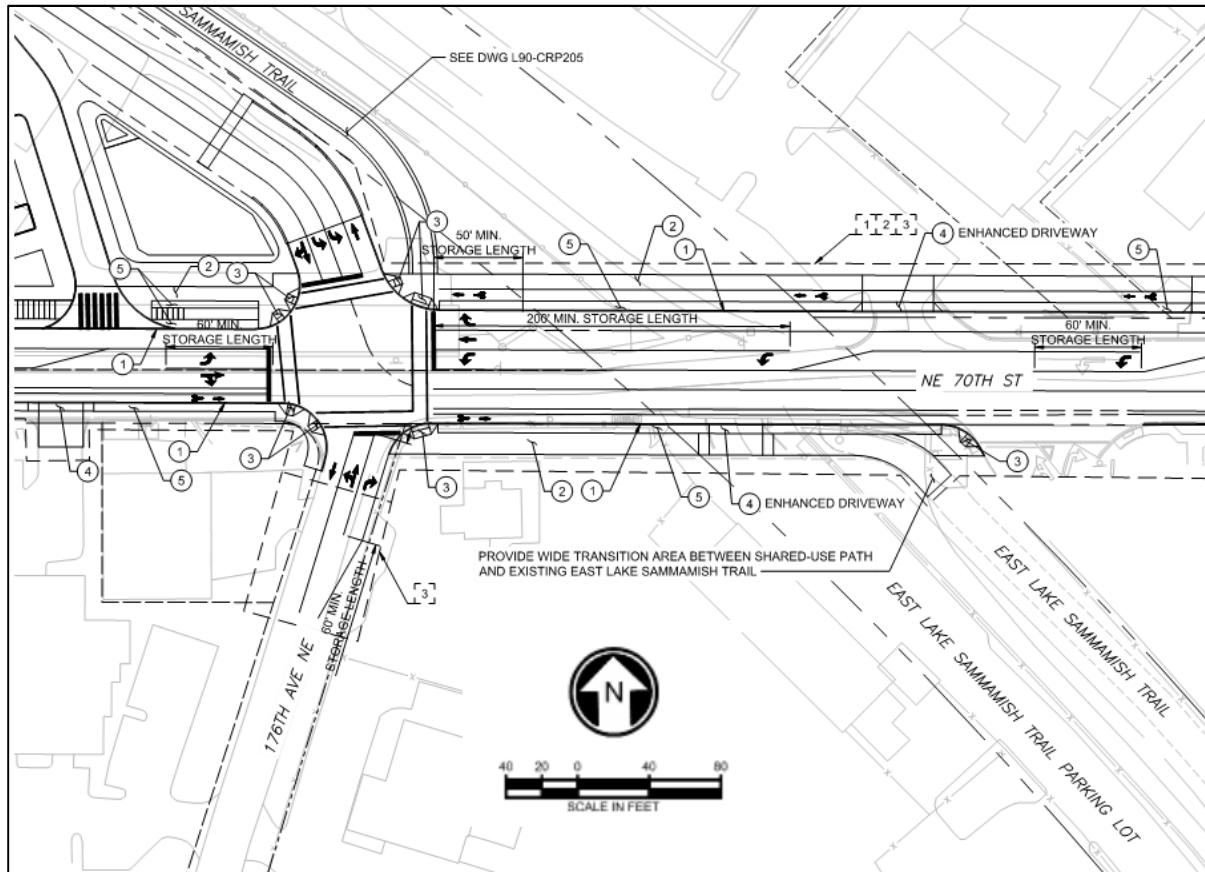

Traffic Volumes

The future 2026 AM and PM peak hour traffic volumes were estimated by applying a 2 percent annual growth rate to the 2022 No Action traffic volumes (see **Figure 6** and **Figure 7**), adding Sound Transit station area vehicle trips as documented in the *Downtown Redmond Link Extension SEPA Addendum* (Sound Transit, August 2018), and adding the LMC Marymoor project trips (see **Figure 5**). It should be noted that the station area trips are 2035 design year forecasts, and therefore it is likely conservative to assume that the full 2035 design year station area vehicle trips would be generated by the Sound Transit SE Redmond Station in 2026.

The future year 2026 AM and PM peak hour traffic volumes with Sound Transit and with the LMC Marymoor project at the intersection of NE 70th Street/176th Ave NE are included in **Appendix C**.

LOS Analysis

The channelization assumptions for the future year 2026 LOS analysis at the intersection of NE 70th Street/176th Ave NE were based on *Sound Transit's Downtown Link Extension Conceptual Design Drawings* (9/24/18) which show the intersection will be signalized and the north leg of the intersection will provide access to the 1,400 stall Sound Transit parking garage. A preliminary plan showing the proposed intersection configuration is provided below.

The signal phasing assumptions for the future year 2026 LOS analysis at the intersection of NE 70th Street/176th Ave NE were based on the mitigation documented in the *Downtown Redmond Link Extension SEPA Addendum* (Sound Transit, August 2018) which identifies that the northbound and southbound approaches should be split phased and there should be a pedestrian scramble phase. The cycle length and splits were optimized for the AM and PM peak hours at NE 70th Street/176th Ave NE in 2026 with Sound Transit and the LMC Marymoor project.

The future year 2026 weekday AM and PM peak hour LOS results at NE 70th Street/176th Ave NE with the proposed LMC Marymoor project are summarized in **Table 10**. The LOS worksheets are included in **Appendix C**.

Table 10
Future 2026 Peak Hour Level of Service Summary

Study Intersection	2026 AM Peak Hour		2026 PM Peak Hour	
	LOS	Delay (sec)	LOS	Delay (sec)
<u>Signalized Intersection</u>				
5. NE 70 th Street / 176 th Ave NE	B	17.3	D	40.4

As shown in **Table 10**, the future signalized intersection of NE 70th Street/176th Ave NE is anticipated to operate at LOS B during the AM peak hour and LOS D during the PM peak hour in 2026 with Sound Transit and with the LMC Marymoor project.

Site Access Analysis

To evaluate the operations of the proposed site access driveways in 2026 with Sound Transit and the LMC Marymoor project, a level of service (LOS) and queue analysis was completed. The year 2026 weekday AM and PM peak hour LOS and queue analysis at the site access locations were based on the methodology outlined in the 6th Edition of the *Highway Capacity Manual* using Synchro 10 software. The estimated future weekday AM and PM peak hour traffic volumes with the proposed project at the site driveways are shown in **Appendix C**. **Table 11** summarizes the calculated LOS and the 95th percentile queues for the controlled movements at the proposed site access driveways during the weekday AM and PM peak hours in 2026 with Sound Transit. The reported 95th percentile queues represent a condition that is exceeded only 5 percent of the time. Detailed LOS and queue calculation worksheets are included in **Appendix A**.

Table 11
Future 2026 Peak Hour Site Access LOS and Queuing

Site Access Controlled Movements	Future 2026 With Project		
	LOS	Delay (sec)	95 th Percentile Queue (ft) ¹
AM Peak Hour			
A. 176 th Ave NE / NE 69 th St (Site Access)

Southbound Left (entering)	A	9.3	< 25'
Westbound Left-Right (exiting)	C	17.1	25'

1. Queues are 95th Percentile queues. <25' indicates 95th Percentile queue statistically less than 1 veh.

As shown in **Table 11**, based on our analysis, the controlled movements at the proposed site access locations on 176th Ave NE (at NE 69th Street and NE 68th Street) are expected to operate at LOS C or better with vehicle queues of 25 feet (1 vehicle) or less during the weekday AM and PM peak hours in 2026, with exception to the westbound shared left-right exiting the site onto 176th Ave NE at NE 69th Street. This movement is anticipated to operate at LOS E during the AM peak hour with a 95th percentile queue of 125 feet and LOS D during the PM peak hour with a 95th percentile queue of 100 feet. This does not account for queuing from the adjacent intersection at NE 70th Street/176th Ave NE which is analyzed below.

Queue Analysis

Vehicle queues at the study intersection of NE 70th Street/176th Ave NE for future year 2026 conditions with Sound Transit and with the LMC Marymoor project were analyzed to determine the potential effect of on-street queuing on LMC Marymoor site access operations.

The queue results were based on the methodology used by the *Synchro 10* traffic software program and were rounded to the nearest 25 feet. The reported queue lengths are 95th percentile queues and represent a condition that is exceeded only five percent of the time.

The results of the AM and PM peak hour queuing analysis are summarized in **Table 12**. The queue results are summarized for the northbound approach to evaluate the effect of queuing on operations at the LMC Marymoor site access on 176th Ave NE (NE 69th Street). The queue calculation worksheets are included in **Appendix C**.

Table 12
2026 Peak Hour Queuing Analysis at NE 70th Street/176th Ave NE

Intersection / Movement	Storage (ft)	<u>2026 AM Peak Hour</u>		<u>2026 PM Peak Hour</u>	
		50 th % Queue Length (ft) ¹	95 th % Queue Length (ft) ¹	50 th % Queue Length (ft) ¹	95 th % Queue Length (ft) ¹
5) NE 70 th St / 176 th Ave NE					
Northbound Left-Thru	160' ²	100'	175'	25'	50'
Northbound Right-Turn	60'	25'	100'	200'	650'

1. Queues are rounded to the nearest 25 feet.
 2. Storage for northbound left-turn is measured to proposed LMC site access at NE 69th Street.

As shown in **Table 12**, during the AM peak hour in 2026 with Sound Transit and the LMC Marymoor project, the 95th percentile queue for the northbound left-thru lane at NE 70th Street/176th Ave NE (175 feet) would be anticipated to extend to just beyond the LMC site access at NE 69th Street (160 feet); however, the average (50th percentile) queue would not reach NE 69th Street. Additionally, the 95th percentile queue for the northbound right-turn at NE 70th Street/176th Ave NE (100 feet) would be anticipated to exceed the available storage (60 feet) during the AM peak hour in 2026 but would not extend beyond the LMC site access at NE 69th Street and the average (50th percentile) northbound right-turn queue would be accommodated within the turn pocket.

During the PM peak hour in 2026 with Sound Transit and the LMC Marymoor project, the 50th and 95th percentile for the northbound left-thru at NE 70th Street/176th Ave NE would not be anticipated to extend to NE 69th Street. However, both the 50th and 95th percentile queues for the northbound right-turn would be anticipated to extend out of the turn pocket and beyond the LMC site access at NE 69th Street.

The northbound right-turn volume at NE 70th Street/176th Ave NE is relatively high with or without the LMC Marymoor project. Based on our review of traffic volumes in the vicinity, much of this traffic likely consists of drivers using NE 65th and 176th Ave NE as a by-pass to travel from Eastlake Sammamish Parkway to Redmond Way. In addition, the Sound Transit traffic analysis for the SE Redmond Station assumes that all drop-offs at the station would drop-off on NE 70th Street west of 176th Ave NE and then would circulate counterclockwise back to NE 70th Street via 176th Ave NE which adds even more traffic to the northbound right-turn movement. In summary, queuing on the northbound approach is primarily due to background traffic and Sound Transit and are not LMC Marymoor project impacts.

The queuing on the northbound approach at NE 70th Street/176th Ave NE shows that it may be difficult for drivers to access 176th Ave NE from NE 69th Street during the peak hours. Residents of the project will have alternate access to 176th Ave NE via NE 68th Street which will operate better than NE 69th Street. This level of queuing in an urban area is not unexpected. With the new grid system of streets being implemented in Marymoor, queues during the peak hours will inevitably back up between adjacent intersections during the peak hours. Drivers will either create gaps to avoid completely blocking intersections, or drivers leaving the LMC Marymoor project will need to wait for the queue to clear on a green light at NE 70th Street/176th Ave NE. In terms of mitigation, the LMC Marymoor project is widening NE 70th Street and 176th Ave NE to accommodate the ultimate improvements planned by the City and Sound Transit, including the addition of a northbound right-turn lane at the intersection.

East Lake Sammamish Trail

As shown in **Figure 2**, the LMC Marymoor project is proposing to construct two new crosswalks from their site to the East Lake Sammamish Trail and adjacent retail property through the existing King County parking lot located directly east of the LMC Marymoor site. One crosswalk would be located at approximately NE 69th Street and would connect to both the trail and the existing pathway to/from the Whole Foods retail shopping center and the second crosswalk would be located at approximately NE 68th Street.

It is difficult to accurately predict the number of pedestrians and bicycles anticipated to cross between the LMC Marymoor site and the regional East Lake Sammamish Trail and/or the adjacent retail via the King County parking lot. However, the pedestrian and bike connections from the LMC Marymoor site to the regional bike trail and adjacent retail property are critical for connecting this new mixed use development to the greater neighborhood. The LMC Marymoor project is part of the greater Marymoor Village neighborhood promoting bicycle and pedestrian connectivity to the Redmond region. It is anticipated that as the Marymoor Village neighborhood develops and the City's planned grid connections are made, both proposed connections will act as pedestrian and bike routes to and through the neighborhood as intended. Residents of the LMC Marymoor development will want to access the regional trail from the on-site trail and access the existing portal connections to the east retail and Whole Foods site on a daily basis because of its convenience. These proposed pedestrian/bicycle connections will promote alternatives to vehicle traffic. Additionally, users of the regional trail to/from the south will want to conveniently access the LMC Marymoor sites public areas and retail shops without having to travel north to NE 70th Street.

It should be noted that the project Applicant is actively working with King County to design the appropriate safe connections and crossings to and through their property. Marked crossings alerting both pedestrians and vehicles of designated crossings is appropriate at these connection points where vehicles, bicycles, and pedestrians will mix. The project Applicant will provide the City with the design solutions at both locations once they are approved by King County.

The LMC project will also construct new sidewalk along their project frontage along the south side of NE 70th Street, along the north side of NE 68th Street, and along the east side of 176th Ave NE. These new crosswalks and sidewalks, along with the regional trail connections through the King County parking lot and the on-site trail connections through the LMC site, will accommodate all pedestrian and bicycle trips between the LMC site and the East Lake Sammamish Trail.

Parking

The LMC Marymoor project proposes to provide a total of 550 parking stalls. Of the 550 total parking stalls, 456 parking stalls will be designated for the proposed residential use, 34 parking stalls will be designated for the proposed retail use, and 60 parking stalls will be designated for the proposed daycare use. A summary of the proposed parking supply and minimum parking supply required per City of Redmond Zoning Code is included in **Table 13**.

Table 13
Parking Summary

Proposed Use	Size	REDMOND ZONING CODE <u>Section 21.13.080B MDD2</u>		Proposed Parking Supply	Supply Meets Code?
		Minimum Parking Ratio	Minimum Parking Required		
Apartments	450 DU	1.25 per DU	563	456	No
Retail	17,000 SF	2.00 per 1,000 sf	34	34	Yes
Day Care	46 employees	1 per employee on max shift	46	60	Yes
		Totals	643	550	

As shown in **Table 13**, the proposed parking supply for the residential use (456 stalls) would not meet current City of Redmond Zoning Code requirements (563 stalls). A separate Parking Modification Request memo has been submitted to the City of Redmond requesting a parking modification to allow for a minimum parking ratio of 1.00 stall per dwelling unit rather than the code-required 1.25 stalls per dwelling unit. The residential Parking Modification Request is anticipated to be approved by the City.

As also shown in **Table 13**, the proposed parking supply for the retail use (34 stalls) would meet minimum code requirements (34 stalls).

As also shown in **Table 13**, the proposed supply for the daycare use (60 stalls) would meet minimum code requirements (46 stalls). Per Table 21.13.080B in the City's zoning code, the code-required parking ratio for a day care center states "enough to accommodate peak use" but under special regulations says "1 per employee on maximum shift."

Based on data presented in ITE *Parking Generation*, the weekday peak parking demand for a day care is 0.24 stalls per student. For a projected maximum student enrollment of 248 students at the LMC Marymoor day care, the resulting weekday peak parking demand is estimated to be 60 stalls (0.24 stalls/student X 248 students). Therefore, the applicant proposes to supply a total of 60 stalls for the proposed day care. Of the 60 total day care stalls, a minimum of 14 stalls would be located within Level 1 of the parking garage at a location that is convenient for parents dropping off or picking up their children (near the elevator/stairs to the ground floor day care center) and would include signage indicating "Day Care Parking Only" to designate the short-term day care use.

MITIGATION

Frontage and Roadway Improvements

Frontage/Roadway improvements are proposed to include the following:

NE 70th Street:

- 19' dedication for Type I street.
- Curb set to accommodate planned Sound Transit layout of NE 70th Street.
- New curb, gutter, sidewalk, landscaping with street trees, and street lighting along project frontage.

176th Ave NE:

- 21' dedication for Type I street.
- Removal of one existing driveway and replace with one new driveway curb-cut at approximately NE 69th Street.
- New curb, gutter, sidewalk, landscaping with street trees, street lighting, cycle track, and on-street parking along project frontage.

NE 68th Street:

- 36' dedication for new Type II street.
- New curb, gutter, sidewalk, landscaping with street trees, and street lighting along project frontage.

Non-Motorized Improvements

The LMC Marymoor project is designing NE 69th Street as a Type III "woonerf" Street that will provide a 40-foot shared space on-site for east/west non-motorized (pedestrian and bicycle) access through the site. Additionally, in the center of the project, a public multi-purpose trail connector is planned in the north/south direction between NE 69th Street and NE 68th Street through the site. Both of these on-site non-motorized improvements will provide pedestrian and bicycle connections to local and regional destinations, including Marymoor Park to the south, the East Lake Sammamish Trail and adjacent retail center to the east, and the future Sound Transit Light Rail Station to the northwest.

In addition to the on-site non-motorized improvements, the LMC Marymoor project proposes to construct two new crosswalks from their site to the regional East Lake Sammamish Trail through the existing King County parking lot located directly east of the LMC Marymoor site. One crosswalk would be located at approximately NE 69th Street and would connect to both the trail and the existing pathway to/from the Whole Foods retail shopping center and the second crosswalk would be located at approximately NE 68th Street.

The project is also constructing a cycle track on 176th Ave NE along the project frontage and new sidewalks on NE 70th Street, 176th Ave NE, and NE 68th Street along the project frontages.

The on-site non-motorized connections through the LMC site, the new crosswalks through the King County parking lot, the new cycle track on 176th Ave NE, and the new sidewalks that will be constructed along the project frontage will provide a pedestrian/bicycle grid connection to and through the site and the Marymoor Village area as intended by the City and will accommodate all pedestrian and bicycle trips between the LMC site, the East Lake Sammamish Trail, and the adjacent Whole Foods retail shopping center.

Off-Site Improvements

The applicant will construct a northbound right-turn lane at the intersection of NE 70th Street/176th Ave NE along their project frontage. Based on the results of the analysis shown in this report, no other project-specific off-site transportation mitigation is proposed for concurrency or SEPA purposes.

Transportation Impact Fees

Long-term traffic impacts in the City of Redmond are mitigated by the projects included in the City's Transportation Facilities Plan (TFP). The TFP projects are funded through the payment of City of Redmond transportation impact fees. Based on this process, a fee is assessed upon a development to pay for a proportionate share of the cost of public facilities needed to serve new growth and development.

The final impact fee calculation will be based on the rates and project size in effect at the time of building permit issuance. The project Applicant is working with the City on adjustments to the impact fee calculations to account for the anticipated reduced vehicular trip generation of the LMC Marymoor site as a result of being a TOD development located adjacent to the planned Sound Transit SE Redmond Station. Any applicable credits for transportation infrastructure will be addressed in the Development Agreement.

¹ DU = Dwelling Units, GFA = Gross Floor Area, GLA = Gross Leasable Area.

² Land Use Code from ITE 10th Edition Trip Generation Manual, updated 2017.

³ Internal/TOD reduction for residential and retail uses estimated based on EPA MXD+ mixed-use calculation for LMC Marymoor site and accounts for internal trips, walking trips, and transit trips. MXD+ calculation resulted in estimated 28% reduction in daily external vehicle trips. As a conservative assumption, a 20% reduction was applied.

⁴ Pass-by/TOD reduction for daycare based on 25% TOD reduction for "internal" trips between proposed daycare and Sound Transit SE Redmond light rail station.

LMC Marymoor
Trip Generation Estimate (AM PEAK HOUR)

Industrial	13,190	GFA	110	Equation	13%	87%	-1	-8	-9
GROSS PM PEAK HOUR TRIP GENERATION = Internal/TOD Reduction = NET TRIP GENERATION (NOT INCLUDING EXISTING USE CREDIT)							277 -60 217	253 -56 197	530 -116 414
EXISTING USES - NET TRIP GENERATION							-1	-8	-9
TOTAL NET NEW TRIP GENERATION (PROPOSED LESS EXISTING)							216	189	405

¹ DU = Dwelling Units, GFA = Gross Floor Area, GLA = Gross Leasable Area.

² Land Use Code from ITE 10th Edition Trip Generation Manual, updated 2017.

³ Internal/TOD reduction for residential and retail uses estimated based on EPA MXD+ mixed-use calculation for LMC Marymoor site and accounts for internal trips, walking trips, and transit trips. MXD+ calculation resulted in estimated 25% reduction in PM Peak Hour external vehicle trips. As a conservative assumption, a 20% reduction was applied.

⁴ Pass-by/TOD reduction for daycare based on 25% TOD reduction for "internal" trips between proposed daycare and Sound Transit SE Redmond light rail station.

Appendix C

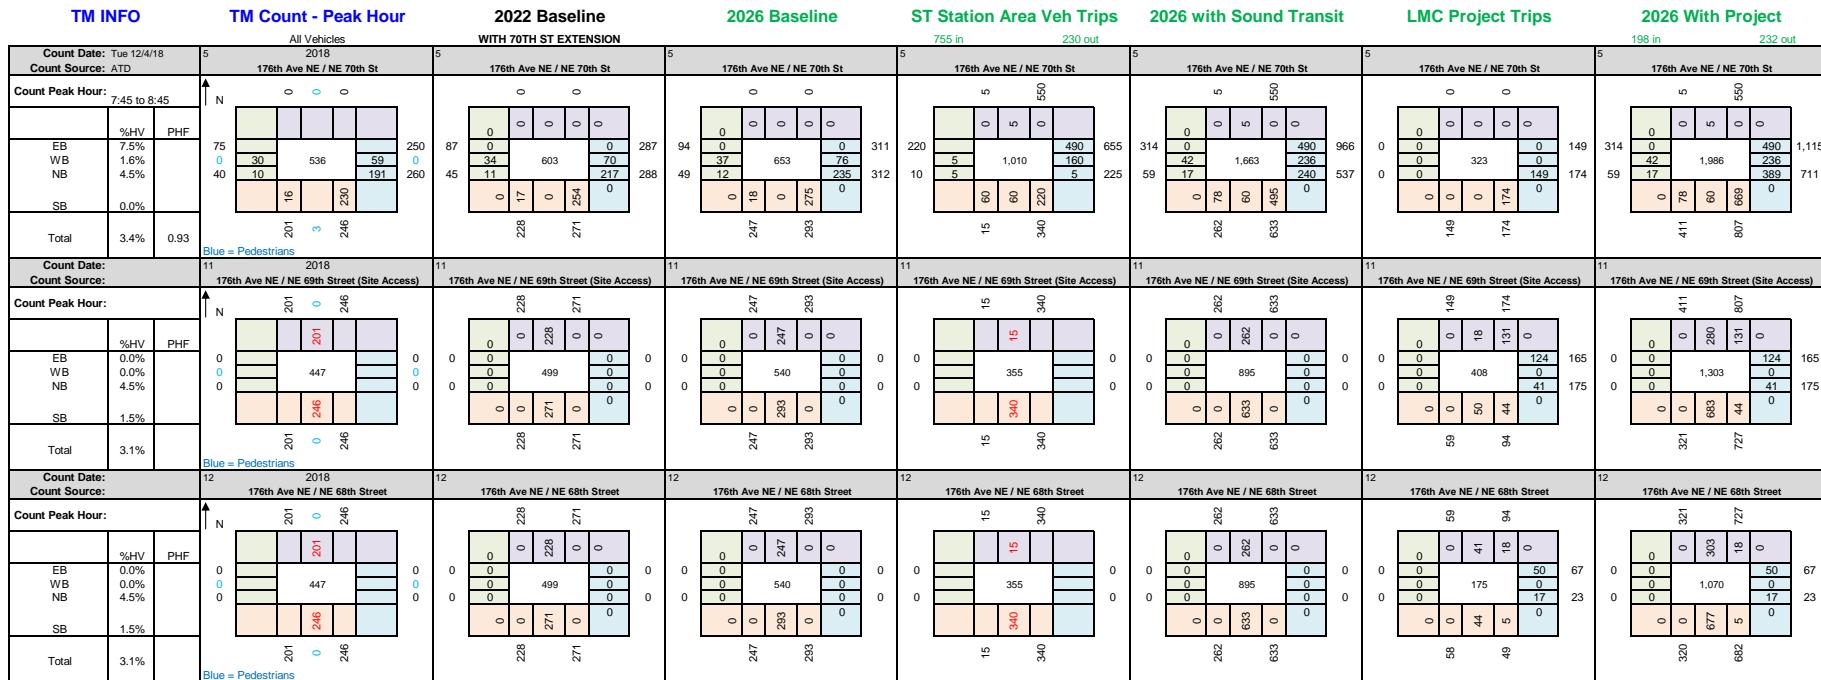

Year 2026 Traffic Volumes and LOS/Queue Calculations

Turning Movement Volumes - AM Peak Hour

Project Name: LMC Marymoor

Project #: #5607

Peak Hour: AM Peak

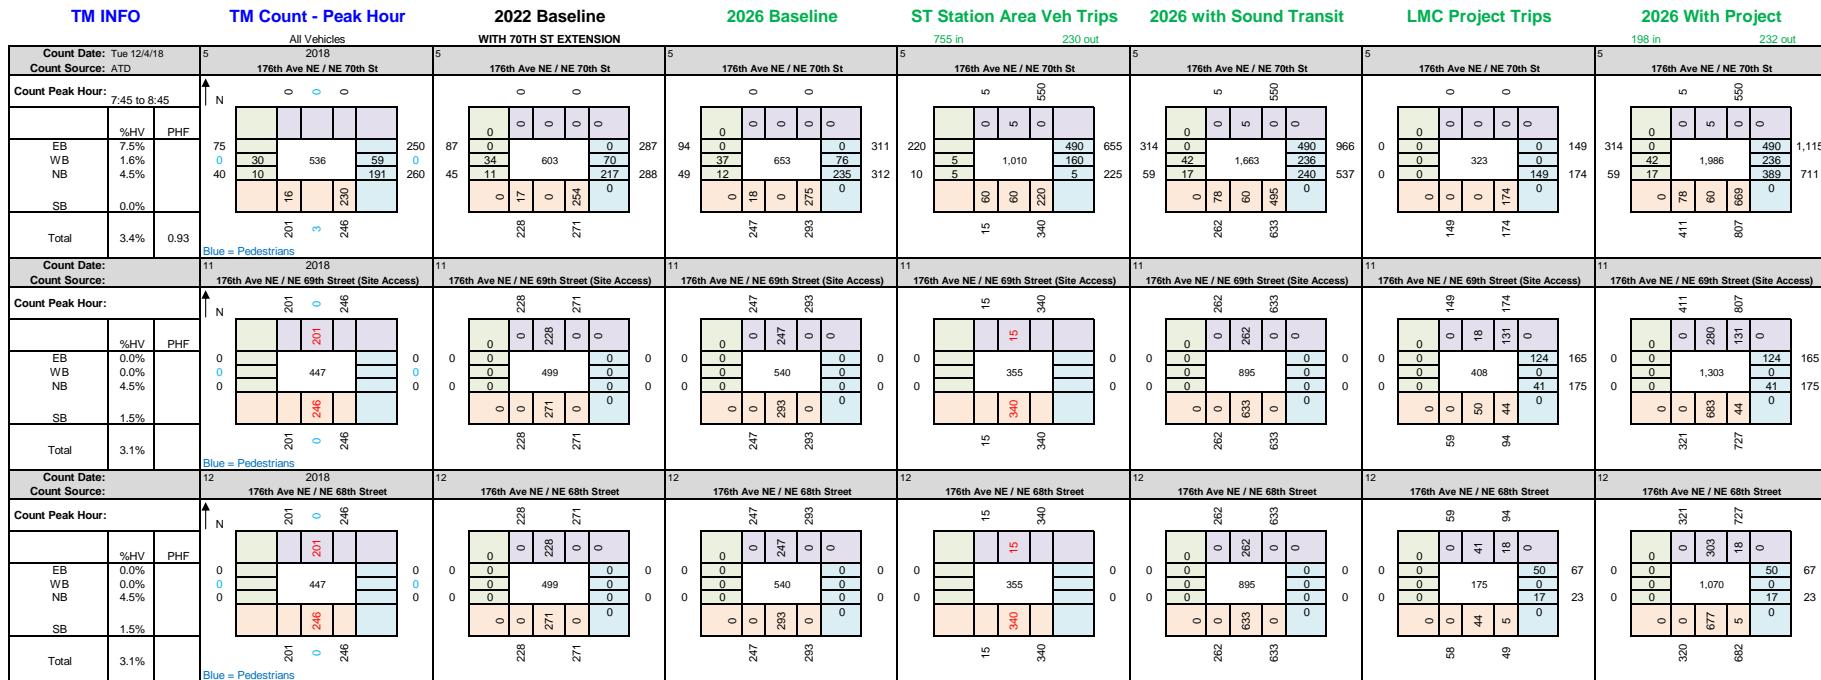

Turning Movement Volumes - AM Peak Hour
