## EXECUTIVE SUMMARY

Farallon Consulting, L.L.C. (Farallon) has prepared this Phase I Environmental Site Assessment (Phase I ESA) Report for the Marymoor Apartments property at 17611 Northeast 70<sup>th</sup> Street in Redmond, Washington (herein referred to as the Site). The Phase I ESA was conducted by Ms. Sara Haynes and was reviewed and approved by Ms. Tina Huff. Both are experienced Environmental Professionals in the field of Phase I ESAs and related environmental investigations.

This Phase I ESA Report was prepared for Lennar Multifamily Communities, LLC in accordance with the letter regarding Proposal for Environmental Due Diligence, Marymoor Apartments Property, 17611 Northeast 70<sup>th</sup> Street, Redmond, Washington dated November 21, 2017, from Messrs. Pete Kingston and J. Riley Conkin of Farallon to Mr. Dan Shieder of Lennar Multifamily Communities, LLC. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13). ASTM E1527-13 is intended to assist the user in satisfying one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

There were no deviations from ASTM E1527-13 during this Phase I ESA. Limiting conditions encountered during this Phase I ESA were the presence of vehicles parked and materials and equipment stored on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site buildings that prevented Farallon from observing the entire interior floor surface. In addition, Farallon was not provided access to all interior and exterior tenant and storage spaces, and Farallon was unable to interview the tenants and operators of the Site to obtain detailed information regarding the storage and/or handling of hazardous substances. These limiting conditions may hinder the conclusions of this report.

Data gaps may affect the ability to identify recognized environmental conditions and Farallon’s ability to render opinions and conclusions for presentation in the Phase I ESA Report. Farallon was unable to interview the tenants and operators of the Site to obtain detailed information regarding the storage and/or handling of hazardous substances. The insufficient information regarding the storage and handling of hazardous substances on the Site is a data gap for this report. The potential release of hazardous substances in connection with Site operations represents a recognized environmental condition in connection with the Site.

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site or proximate to the Site that have caused and/or may cause an adverse environmental condition. This Phase I ESA Report provides the results of investigation into past

and present ownership and uses of the Site, consistent with good commercial and/or customary practice.

The Site comprises King County Parcel Nos. 122505-9095, 122505-9152, and 122505-9229, which total 4.88 acres of land developed with four buildings: a two-story 3,750-square-foot service repair garage constructed in 1975 (Building A); a one-story 2,800-square-foot storage warehouse constructed in 1980 (Building B); a one-story 4,800-square-foot manufacturing building constructed in 1978 (Building C); and a one-story 1,840-square-foot office building with a basement constructed in 1940 (Building D). The Site buildings currently are occupied by a granite fabrication shop, a tire distributor, and an equipment repair shop, and are used for office and storage purposes. Remaining areas of the Site consist of paved and unpaved parking areas and areas used for the storage of tires, equipment, and machinery. Access to the Site is gained from 176<sup>th</sup> Avenue Northeast, west of the Site. According to the King County Department of Assessments, the Site owner is Mr. Brian Carlson, et al.

At the time of the site reconnaissance, Farallon observed significant petroleum staining on the interior floors of Buildings B and C, which appeared to be from spills and releases related to the improper storage and handling of hazardous substances and petroleum products, including hydraulic oils, solvent-based parts cleaners, various tire mounting compounds, and isopropyl alcohol. The potential release of hazardous substances from current operations on the Site represents a recognized environmental condition in connection with the Site.

Farallon observed de minimis petroleum staining in localized areas of the Site that appeared to be from parked vehicles and equipment, and the improper storage of containers that appeared to contain petroleum products and other unknown materials. Several unlabeled 55-gallon drums were observed stored north and west of Building A. Farallon observed evidence of significant staining beneath and in the vicinity of several of the drums. The potential release of hazardous substances in connection with the improper storage of containers and evidence of localized releases from current operations represents a recognized environmental condition in connection with the Site. According to the Site representative, sanitary sewage generated at the Site discharges to a separate septic system for each Site building. Based on the known current and historical uses of the Site, hazardous materials stored and generated on the Site could have been disposed of from interior building connections to the Site septic systems. The potential release of hazardous substances to Site septic systems represents a recognized environmental condition in connection with the Site.

Historically, the Site appeared to be undeveloped and wooded from at least 1943 through 1969, with the exception of a residence apparent on the northern portion of the Site. The Site appeared developed with three warehouse structures and a residential structure from at least 1980 through the present, based on aerial photographs reviewed. Piles of building materials, machinery, shipping containers, drums, and/or equipment appeared throughout the Site from 1980 to the present. The majority of the Site appeared unpaved until around 2007, when the southeastern portion of the Site appeared paved in aerial photographs. The Site appeared to be accessed from the east, north, and west until around 2011, when the northern and eastern Site boundaries appeared fenced off. City directory listings for the Site address included a residential listing in 1976 and 1981 and industrial

and commercial listings from 1981 to 2014. The potential releases of hazardous materials associated with current and historical operations on the Site represent a recognized condition in connection with the Site.

Farallon was provided with the *Phase II Environmental Site Assessment, Washington Diesel Services, 17611 NE 70<sup>th</sup>, Redmond, Washington* dated September 1994, prepared by AGRA Earth & Environmental, Inc. (1994 Phase II report). According to the 1994 Phase II report, an initial phase of environmental assessment was conducted at the Site in January 1994. The report detailing this phase of environmental assessment was not provided to Farallon, but was summarized in the 1994 Phase II report. The 1994 Phase II report indicated that total petroleum hydrocarbons (TPH) as diesel- and as oil-range organics were detected at concentrations exceeding the Washington State Model Toxics Control Act Cleanup Regulation (MTCA) cleanup levels in soil samples collected from the Site. Volatile aromatic compounds, halogenated volatile organic compounds, lead, and chromium were detected at concentrations less than MTCA cleanup levels. No groundwater samples were collected during the January 1994 investigation.

According to the 1994 Phase II report, soil and groundwater samples were collected from three borings advanced on the Site in August 1994 in areas that had previously exhibited the highest concentrations of TPH. Groundwater was encountered at depths ranging from 18.5 to 21 feet below ground surface. TPH and halogenated volatile organic compounds were detected at concentrations less than MTCA cleanup levels in soil and groundwater samples collected. Based on Farallon's review of reasonably ascertainable information, the potential release of hazardous substances associated with current and historical operations on the Site represents a recognized environmental condition in connection with the Site.

In 2018, Farallon conducted multiple phases of subsurface investigation at the Site. The subsurface investigation included observation and soil sampling of six geotechnical borings; advancement of six borings and collection of soil and reconnaissance groundwater samples; installation of four monitoring wells and collection of soil and reconnaissance groundwater samples; and a groundwater monitoring event conducted at the three existing and four new monitoring wells. Based on depth to water measurements in April 2018, the interpreted groundwater flow direction at the Site is to the southwest. TPH as oil-range organics was detected at a concentration exceeding the MTCA Method A cleanup level in a single soil sample collected at a depth of 5 feet below ground surface from a boring advanced in the central portion of the Site. The confirmed release of total petroleum hydrocarbons as oil-range organics at the Site represents a recognized environmental condition in connection with the Site.

Adjacent properties at the time of the site reconnaissance included commercial retail and light industrial facilities to the west across 176<sup>th</sup> Avenue Northeast, including Stanford Signs, Newport Custom Shutters, and Redmond Carpet and Interiors. A mini-storage facility and the East Lake Sammamish Trail are north of the Site across Northeast 70<sup>th</sup> Street. A road accessing a parking area is east-adjacent of the Site. Two distribution warehouse facilities are south-adjacent of the Site.

Historically, adjacent properties appeared undeveloped from at least 1943 through at least 1969, with the exception of residences west and northeast of the Site in 1965. In the 1980 aerial photograph, the north-adjacent mini-storage facility appeared constructed and the south-adjacent distribution warehouse appeared under construction. By at least 1985, development north- and south-adjacent of the Site appeared similar to the present and the west-adjacent property appeared partially cleared of vegetation. Adjacent properties north-, west-, and south-adjacent of the Site appeared similar to the present by 1990 and the east-adjacent paved parking area appeared constructed by 2011, according to aerial photographs. Adjacent properties appeared similar to the present by 2011. City directory listings for adjacent properties included residential, commercial, and light-industrial manufacturing listings and electronics companies.

The Environmental Data Resources, Inc. (EDR) database report prepared for the Site (EDR Report) identified the Site address in several databases. A release from a damaged chemical tote resulted in a chemical spill on the Site in 2011. Farallon searched the Washington State Department of Ecology (Ecology) Toxics Cleanup Program database for the Site, which indicated remedial activities were conducted to clean up and dispose of the contaminated soil, and Ecology issued a No Further Action determination for the Site in 2012. Based on reasonably ascertainable information, the No Further Action determination for this release is a historical recognized environmental condition in connection with the Site.

The EDR Report identified several facilities adjacent or proximate to the Site in the regulatory databases reviewed. Several of these facilities have known or suspected releases of hazardous substances to soil and/or groundwater. Regulatory files for facilities in the vicinity of the Site were not reviewed due to the time and/or cost constraints of this Phase I ESA; additional information may be available at Ecology. Based on the current regulatory status, topographic location, and/or relative distance from the Site, these listings represent a recognized environmental condition in connection with the Site.

Based on review of the Site history, interviews with persons knowledgeable about the Site, reconnaissance of the Site, and review of regulatory agency lists, this Phase I ESA identified the following recognized environmental conditions in connection with the Site:

- The known and potential release of hazardous substances associated with current and historical operations on the Site; and
- The potential migration of hazardous substance to the Site from operations at properties in the vicinity of the Site.

## **1.0 INTRODUCTION**

This Phase I Environmental Site Assessment (Phase I ESA) Report was prepared by Farallon Consulting, L.L.C. (Farallon) for the Marymoor Apartments property at 17611 Northeast 70<sup>th</sup> Street in Redmond, Washington (herein referred to as the Site) (Figure 1). This section discusses the project authorization, and the qualifications of the Environmental Professionals conducting and reviewing the Phase I ESA work. Also included in this section are the project purpose, objective, scope of services, deviations, limiting conditions, and data gaps.

### **1.1 PROJECT AUTHORIZATION**

This Phase I ESA Report was prepared for Lennar Multifamily Communities, LLC in accordance with the letter regarding Proposal for Environmental Due Diligence, Marymoor Apartments Property, 17611 Northeast 70<sup>th</sup> Street, Redmond, Washington dated November 21, 2017, from Messrs. Pete Kingston and J. Riley Conkin of Farallon to Mr. Dan Shieder of Lennar Multifamily Communities, LLC. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13).

### **1.2 PROFESSIONAL QUALIFICATIONS**

The Phase I ESA was conducted by Ms. Sara Haynes and was reviewed and approved by Ms. Tina Huff. Both have an understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions, and the ability to develop opinions regarding conditions indicative of a release or threatened release of hazardous substances and petroleum products. These Environmental Professionals have developed and performed all appropriate inquiry, in conformance with the standards and practices set forth in Part 312 of Title 40 of the Code of Federal Regulations. The professional qualifications of Mss. Haynes and Huff are provided in Appendix A.

### **1.3 PROJECT PURPOSE AND OBJECTIVE**

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site and within the appropriate study area that have caused and/or may cause an adverse environmental impact. ASTM E1527-13 is intended to permit a user to satisfy one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

The objective of the Phase I ESA was to perform an appropriate inquiry into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice. This

Phase I ESA Report is to be used as a risk management tool to meet all appropriate inquiry requirements and the Comprehensive Environmental Response, Compensation, and Liability Act liability defense. The Phase I ESA does not guarantee that there are no impacts to the Site.

For the purpose of this Phase I ESA Report, the term “recognized environmental condition” is defined as the presence or likely presence of any hazardous substance or petroleum product in, on, or at the Site due to releases to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The term is not intended to include “de minimis conditions” that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the applicable governmental agencies.

The term “controlled recognized environmental condition” is defined as a recognized environmental condition resulting from a past release of a hazardous substance or petroleum product that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in-place subject to implementation of required controls.

The term “historical recognized environmental condition” is defined as a past release of any hazardous substance or petroleum product that has occurred in connection with the Site and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the Site to any required controls.

## **1.4 PROJECT SCOPE OF WORK**

This Phase I ESA Report has been prepared in accordance with the scope of work presented in ASTM E1527-13 and the letter regarding Proposal for Environmental Due Diligence, Marymoor Apartments Property, 17611 Northeast 70<sup>th</sup> Street, Redmond, Washington dated November 21, 2017, from Messrs. Kingston and Conkin of Farallon to Mr. Shieder of Lennar Multifamily Communities, LLC. The scope of work for this Phase I ESA included a records review, literature research and review, a site reconnaissance, interviews with individuals familiar with the Site, interviews with local governmental officials, and preparation of this report.

## **1.5 DEVIATIONS**

There were no deviations from ASTM E1527-13 during this Phase I ESA.

## **1.6 LIMITING CONDITIONS**

Limiting conditions encountered during this Phase I ESA were the presence of vehicles parked and materials and equipment stored on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site buildings that prevented Farallon from observing the entire interior floor surface. In addition, Farallon was not provided access to all interior and exterior tenant and storage spaces, and Farallon

was unable to interview the tenants and operators of the Site to obtain detailed information regarding the storage and/or handling of hazardous substances. These limiting conditions may hinder the conclusions of this report.

## **1.7 DATA GAPS**

Data gaps may affect the ability to identify recognized environmental conditions and Farallon's ability to render opinions and conclusions for presentation in the Phase I ESA Report. Farallon was unable to interview the tenants and operators of the Site to obtain detailed information regarding the storage and/or handling of hazardous substances. The insufficient information regarding the storage and handling of hazardous substances on the Site is a data gap for this report. The potential release of hazardous substances in connection with Site operations represents a recognized environmental condition in connection with the Site.

## **2.0 SITE OVERVIEW**

This section includes an overview of the Site location, improvements, and operations. A description of adjacent and surrounding land use also is provided.

### **2.1 SITE LOCATION**

The Site is southeast of the intersection of Northeast 70<sup>th</sup> Street and 176<sup>th</sup> Avenue Northeast, at 17611 Northeast 70<sup>th</sup> Street in Redmond, King County, Washington. The location is in a commercial/industrial area approximately 1.5 miles east-southeast of downtown Redmond. The Site vicinity is shown on Figure 1.

### **2.2 SITE DESCRIPTION**

The Site comprises King County Parcel Nos. 122505-9095, 122505-9152, and 122505-9229, which total 4.88 acres of land developed with four buildings: a two-story 3,750-square-foot service repair garage constructed in 1975 (Building A); a one-story 2,800-square-foot storage warehouse constructed in 1980 (Building B); a one-story 4,800-square-foot manufacturing building constructed in 1978 (Building C); and a one-story 1,840-square-foot office building with a basement constructed in 1940 (Building D). Remaining areas of the Site consist of paved and unpaved parking areas and areas used for the storage of tires, equipment, and machinery. Access to the Site is gained from 176<sup>th</sup> Avenue Northeast, west of the Site.

Figure 2 presents a plan map of the Site. Additional details pertaining to the Site are provided in Section 8.2, Site Reconnaissance Observations. Site photographs are presented in Appendix B.

### **2.3 SITE OPERATIONS**

Building A is occupied by Rock of Ages and operated as a granite fabrication shop; Building B is occupied by Blackstone-OTR and operates as a tire distributor; Building C is occupied by Mister Concrete Construction for office and storage purposes, Washington Hydraulic for equipment repair operations, and Trend Set Custom Pavers for storage purposes; and Building D is occupied by Gregory Drilling for office purposes. Several fenced and gated areas are occupied by various other tenants for vehicles and equipment storage. The names of these tenants were not provided to Farallon during the site reconnaissance. Areas adjacent to the buildings are used for parking, storage, and equipment storage. According to the King County Department of Assessments, the Site owner is Mr. Brian Carlson, et al.

### **2.4 ADJACENT AND SURROUNDING LAND USE**

Adjacent properties at the time of the site reconnaissance included commercial retail and light industrial facilities to the west across 176<sup>th</sup> Avenue Northeast, including Stanford Signs, Newport Custom Shutters, and Redmond Carpet and Interiors. A mini-storage facility and the East Lake Sammamish Trail are north of the Site across Northeast 70<sup>th</sup> Street. A road accessing a parking

area is east-adjacent of the Site. Two distribution warehouse facilities are south-adjacent of the Site.

Farallon did not access adjacent properties, which were observed from public rights-of-way. No visual evidence of recognized environmental conditions was observed on abutting or nearby properties during the site reconnaissance. Observations were restricted to areas readily observable from the Site, and to public rights-of-way.

### 3.0 PHYSICAL SETTING

The physical setting of the Site, including topography, geology, and hydrogeology, is described in this section. Farallon's assessment of sensitive receptors in the area also is discussed.

#### 3.1 TOPOGRAPHY

Farallon reviewed the U.S. Geological Survey (USGS) topographic map for Redmond, Washington dated November 22, 2017 provided by Environmental Data Resources, Inc. (EDR). The map depicts the Site at an elevation of approximately 51 feet above mean sea level. The Site topography is relatively flat. Regional topography is generally flat, with a slight slope down to the south and hills to the north and east.

#### 3.2 GEOLOGY AND HYDROGEOLOGY

The Site is approximately 1 mile southeast of downtown Redmond, Washington, within the Puget Lowland region. Surficial geology in the Site vicinity generally consists of glacial till, sands, and gravels. The glacial till consists of dense gravelly sandy silt to silty sand with varied quantities of clay and scattered cobbles and boulders. These glacially derived materials were deposited by the Cordilleran Ice Sheet during the Vashon Stage of glaciation. According to The EDR Radius Map Report with GeoCheck prepared for the Site dated November 22, 2017 (EDR Report), surface soil at the Site consists primarily of somewhat excessively drained loamy fine sand.

Groundwater migration in the Puget Lowland Region generally is confined to the most-recent alluvial deposits of sands and gravel. Lateral and vertical migration of groundwater is impeded by the dense and relatively impermeable nature of the glacial till, and by the commonly laterally discontinuous nature of the aquifer-bearing materials. Perched and discontinuous zones of shallow groundwater may be present seasonally and locally above the impervious till. Shallow groundwater flow direction typically can be estimated by examining surface topography. Groundwater generally flows from areas of high elevation to areas of low elevation. Shallow groundwater flow usually parallels or migrates toward nearby surface water bodies. Surface features such as streets, utility trenches, and paved areas can locally alter the flow direction of shallow groundwater.

Based on the topography in the vicinity of the Site and the presence of the Sammamish River approximately 0.75 mile southwest of the Site, groundwater flow direction is presumed to be toward the west-southwest. Based on the *Phase II Environmental Site Assessment, Washington Diesel Services, 17611 NE 70<sup>th</sup>, Redmond, Washington* dated September 1994, prepared by AGRA Earth & Environmental, Inc. (1994 Phase II report), groundwater at the Site was encountered at depths ranging from 18.5 to 21 feet below ground surface (bgs). However, the groundwater flow direction was not interpreted at the time of the 1994 Phase II investigation. Seven monitoring wells are installed at the Site. The depth to groundwater ranged from approximately 16 to 19 feet bgs during the monitoring event conducted by Farallon on April 2018. Based on groundwater

elevations calculated using the April 2018 groundwater measurements, the groundwater flow direction at the Site is interpreted to be toward the southwest. Sensitive Receptors

Farallon conducted a limited assessment of sensitive receptors on or in the vicinity of the Site that was confined to visually apparent features such as surface water bodies (e.g., low-lying wet areas, streams, ponds) and residential and recreational areas. Farallon's assessment of sensitive receptors included a review of readily ascertainable information relating to the presence of private, semiprivate, public, and industrial water supply wells.

According to the EDR Report, the Site is not in a flood plain. The nearest federally designated wetlands are approximately 0.2 mile northwest of the Site. No public water supply wells were identified proximate to the Site. The water bodies nearest the Site were identified as Bear Creek approximately 0.26 mile northwest of the Site, the Sammamish River approximately 0.75 mile southwest of the Site, and Lake Sammamish approximately 0.80 mile south of the Site.

## **4.0 USER-PROVIDED INFORMATION**

Farallon understands that the user of this report, Lennar Multifamily Communities, LLC, is seeking to follow the standards set forth in ASTM E1527-13 to complete an environmental assessment of the Site. The user has specific responsibilities for fulfilling ASTM E1527-13 requirements to help identify the possibility of recognized environmental conditions in connection with the Site. These responsibilities do not require the technical expertise of an Environmental Professional, and were not performed by the Environmental Professional who conducted the Phase I ESA at the Site.

To facilitate fulfillment of the ASTM E1527-13 requirements identified below, Farallon provided Lennar Multifamily Communities, LLC with a copy of the *Phase I ESA User Questionnaire* (User Questionnaire) to complete. The User Questionnaire is provided in Appendix C of this Phase I ESA Report.

### **4.1 TITLE AND LIEN RECORDS**

Lennar Multifamily Communities, LLC indicated that it was not aware of environmental liens against the Site.

### **4.2 EXPERIENCE AND SPECIALIZED KNOWLEDGE**

Lennar Multifamily Communities, LLC indicated that it has no experience or specialized knowledge regarding the Site.

### **4.3 COMMONLY KNOWN INFORMATION**

Lennar Multifamily Communities, LLC indicated that it is not aware of commonly known information that would lead to identification of recognized environmental conditions in connection with the Site. Lennar Multifamily Communities, LLC provided Farallon with the development plan for the Site, which includes a mixed residential and commercial development with retail tenant spaces on the ground floor and 480 residential tenant spaces above.

### **4.4 PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT USERS**

Lennar Multifamily Communities, LLC will rely on this Phase I ESA Report.

### **4.5 PREVIOUS ENVIRONMENTAL STUDIES**

Farallon was provided with the 1994 Phase II report. According to the 1994 Phase II report, a previous environmental assessment not provided to Farallon was performed in January 1994, which comprised excavating six soil test pits to depths ranging from 10 to 13 feet bgs. According to the 1994 Phase II report, total petroleum hydrocarbons (TPH) as diesel- and as oil-range organics were detected at concentrations exceeding MTCA cleanup levels at the Site. Benzene,

toluene, ethylbenzene, xylenes, halogenated volatile compounds, lead, and chromium were detected at concentrations less than MTCA cleanup levels. No groundwater samples were collected during the January 1994 investigation.

Based on the results of the January 1994 investigation, soil and groundwater samples were collected in August 1994 from three borings advanced on the Site in areas that previously exhibited the highest concentrations of TPH. Monitoring wells were installed in the borings. Groundwater was encountered at depths ranging from 18.5 to 21 feet bgs, but the directional flow of groundwater could not be confirmed.

According to the 1994 Phase II report, Washington Diesel Services operated on the Site at the time of the 1994 Phase II ESA. Washington Diesel Services owned the Site and leased portions of the Site to a utility installation company, to a towing company for use as an impound lot, and to a brick manufacturing plant. Washington Diesel Services operations included engine repair, cleaning and degreasing, storage of heavy equipment, and other related activities since 1977. At the time of the 1994 Phase II ESA, the Site was developed with two shop buildings and an abandoned concrete steam cleaning pit attached to an improvised drain field, and various equipment and machinery was present throughout the Site. At the time of the 1994 Phase II ESA, one underground storage tank (UST) formerly used for waste oil storage reportedly had been removed by the previous owner. One aboveground storage tank (AST) was in use at the Site for waste oil storage.

TPH, BTEX, and HVOCs were reported non-detect at the laboratory reporting limits in soil samples collected from the Site. TPH was detected at concentrations less than the current MTCA Method A cleanup levels in groundwater, and 1,1,1, trichloroethane was detected at a concentration less than the current MTCA Method A cleanup level in a groundwater sample collected proximate to the AST.

The 1994 Phase II report concluded the extent of contamination encountered during the 1994 Phase II ESA was limited, was not highly mobile, and did not appear to contaminate groundwater. The 1994 Phase II report indicated the findings were limited based on the presence of equipment and other materials at the Site and there was insufficient characterization to fully delineate all potential contamination on the Site. The 1994 Phase II report recommended further Site characterization. Farallon was not provided with documentation that indicated further investigation took place on the Site.

Based on Farallon's review of reasonably ascertainable information, the potential release of hazardous substances associated with historical operations on the Site represents a recognized environmental condition in connection with the Site.

## 5.0 SITE BACKGROUND AND HISTORY

Farallon reviewed the following historical sources as part of this Phase I ESA:

- Aerial photographs of the Redmond, Washington area dated 1943, 1965, 1969, 1980, 1985, 1990, 2005, 2006, 2009, and 2011 obtained from EDR; and dated 1990, 2002, 2005 through 2007, and 2009 through 2017 obtained from Google Earth;
- Polk City Directories of Redmond, Washington dated 1971, 1976, 1981, 1992, 1995, 2000, 2005, 2010, and 2014 obtained from EDR; and
- USGS topographic maps of Snohomish, Washington dated 1895 and 1897; of Seattle, Washington dated 1897; of Kirkland, Washington dated 1950, 1968, 1973, and 2014; and of Redmond, Washington dated 1950, 1968, 1973, and 2014 obtained from EDR.

A search for Sanborn Fire Insurance Maps resulted in notification that there was no coverage for the Site. Farallon is not responsible for the accuracy or completeness of the historical sources reviewed. The historical sources documented were reasonably ascertainable and practically reviewable during this Phase I ESA.

### 5.1 SITE

The Site appeared to be undeveloped and wooded in the 1943 aerial photograph. By at least 1965, with the exception of a residence apparent on the northern portion of the Site and an unimproved access road apparent along the south-central portion of the Site. The residence was no longer apparent in the 1969 aerial photograph. According to aerial photographs, the Site appeared developed with three warehouse structures and a residential structure from at least 1980 through at least 1990. Piles of materials, machinery, and/or equipment appeared throughout the Site, and the Site appeared unpaved. According to the 2002 aerial photograph reviewed, the southern portion of the Site appeared cleared of all equipment and machinery and the northern portion of the Site appeared filled with equipment, vehicles, and materials. The Site appeared to be accessed from the east, north, and west until around 2011, when the northern and eastern Site boundaries appeared fenced off.

By at least 2005, the northern portion of the Site appeared cleared of the majority of equipment, vehicles, and materials, and building materials, vehicles, shipping containers, drums, and tires were apparent on the southern portion of the Site. A shed structure was apparent on the southwestern portion of the Site and the northern and southern portions of the Site appeared to be delineated by chain-link fencing. According to aerial photographs reviewed, the Site appeared to be used for staging equipment, tires, vehicles, and materials from 2005 through the present. The Site appeared relatively unchanged between 2005 and the present, with the exception of paving on the southeastern portion of the Site, which appeared completed around 2007.

City directory listings for the Site address included a residential listing in 1976 and 1981 and industrial and commercial listings from 1981 to 2014. Washington Diesel was listed from 1981 to

1995, Redmond Welders was listed in 1981, Northern Marine Salvage was listed in 1995, Northern Oil Cooler was listed in 1995 and 2010, Washington Hydraulic was listed from 1995 to 2014, Standard Utility Contractors was listed in 1995, Trendset Custom Pavers and/or Trendset Concrete Products were listed from 1995 to 2000, Superior Towing was listed in 2000, Larry Hights Residential Roofing and/or Western Roofing Service was listed from 2000 to 2005, the Holmes Group was listed in 2005, Gregory Drilling was listed from 2005 to 2014, Mister Concrete Construction Company was listed from 2010 to 2014, and Blackstone OTR was listed in 2014.

Additional information regarding the Site history is provided in Section 4.5, Previous Environmental Studies. Current and former operators at the Site are/were known to store and generate hazardous substances. The known and potential release of hazardous substances related to current and former operations on the Site represents a recognized environmental condition in connection with the Site. In 2018, Farallon conducted multiple phase of subsurface investigation at the Site. The subsurface investigation included: observation and soil sampling of six geotechnical borings; advancement of six borings and collection of soil and reconnaissance groundwater samples; installation of four monitoring wells and collection of soil and reconnaissance groundwater samples; and a groundwater monitoring event conducted at the three existing and four new monitoring wells. TPH as oil-range organics was detected at concentrations exceeding the MTCA Method A cleanup level in a single soil sample collected at a depth of 5 feet bgs from a boring advanced in the central portion of the Site. TPH as oil-range organics, tetrachloroethene, and/or lead that were less than the regulatory cleanup levels were detected in several soil samples collected at the Site. Low concentrations of TPH as oil-range organics were detected in a single groundwater sample collected from a shallow groundwater-bearing zone encountered at the Site. The remaining constituents of potential concern were reported non-detect.

The confirmed releases of TPH as oil-range organics represent a recognized environmental condition in connection with the Site.

## **5.2 ADJACENT PROPERTIES**

Railroad tracks appeared southwest-adjacent of the Site in the 1895 and 1897 topographic maps and northeast-adjacent of the Site in the 1943 through 1973 aerial photographs and topographic maps reviewed. Adjacent properties appeared undeveloped from at least 1943 through at least 1969, with the exception of residences west and northeast of the Site in 1965. In the 1980 aerial photograph, the north-adjacent mini-storage facility appeared constructed and the south-adjacent distribution warehouse appeared under construction. By at least 1985, development north- and south-adjacent of the Site appeared similar to the present and the west-adjacent property appeared partially cleared of vegetation. Adjacent properties north-, west-, and south-adjacent of the Site appeared similar to the present by 1990 and the east-adjacent paved parking area appeared constructed by 2011, according to aerial photographs.

Adjacent properties appeared similar to the present by 2011. City directory listings for adjacent properties included residential listings from 1971 to 1981, Valley Upholstery from 1971 to 1981, American Mini Storage from 1981 to 2014, and other residential, commercial, and light industrial

manufacturing listings and electronics companies from 1995 to 2014. Additional information regarding adjacent properties is provided in Section 6.2, Adjacent and Other Facility Listings.

### **5.3 PUGET SOUND REGIONAL ARCHIVES**

Farallon reviewed historical records for the Site at the Puget Sound Regional Archives at Bellevue College in Bellevue, Washington. According to the historical assessor information reviewed by Farallon, a 168-square-foot single-family residence heated with a stove was constructed in 1943 and a 720-square-foot single-family residence heated with a stove was constructed in 1949 on the northern portion of the Site. Building D reportedly was constructed in 1948 on the northern portion of the Site, according to assessor records. Historical assessor records from the 1990s indicated the area currently developed with Building D was developed with a 920-square-foot residence with a 920-square-foot unfinished basement constructed in 1940 and was converted to office space by the 1990s.

## 6.0 REGULATORY REVIEW

EDR conducted a review of environmental regulatory agency database listings to identify reported environmental issues related to the Site and facilities in the Site vicinity. Farallon used the greater of each approximate minimum search distance from the Site for each of the referenced federal and state environmental databases, as specified in ASTM E1527-13.

Farallon reviewed the results from the EDR Report to note reported facilities in the vicinity of the Site that were considered to have a potential to adversely impact the Site (i.e., are known to have resulted in or are expected to result in a recognized environmental condition). Reported facilities identified in the EDR Report were evaluated with respect to the nature and extent of a given release, the distance of the reported facility from the Site, the stratigraphy of soils, the expected soil permeability, and the topographic position of a reported facility with respect to known or expected local and/or regional groundwater flow direction.

The descriptions of the databases searched, the complete database names for the abbreviations used in this Phase I ESA Report, and the associated search distances from the Site are provided in the EDR Report presented in Appendix D.

### 6.1 ON-SITE LISTINGS

**Washington Diesel Service Inc** at 17611 70<sup>th</sup> Street, formerly located on the Site in Building B, was identified in the ALLSITES, RCRA NonGen/NLR, FINDS, and ECHO databases. According to the EDR Report, the facility was verified as a non-generator of hazardous materials in 2006, with no reported violations.

**Earth Metals and Junk Company Inc** at 6926 176<sup>th</sup> Avenue Northeast, formerly located on the Site in Building A, was identified in the RCRA NonGen/NLR, FINDS, ECHO, ALLSITES, and MANIFEST databases. According to the EDR Report, the facility was verified as a non-generator of hazardous materials and reportedly accumulated batteries on the Site with no reported violations. In 2011, the facility was listed in the MANIFEST databases as having terminated operations at the Site and was listed as formerly operated as a transfer facility that accepted lead acid batteries in good condition.

**Blackstone OTR** at 6820 176<sup>th</sup> Avenue Northeast, located on the Site in Building B, was identified in the ALLSITES, CSCSL NFA, SPILLS, and FINDS databases. According to the EDR Report, an unknown quantity of petroleum and/or chemical products was spilled to soil in 2011. Blackstone OTR underwent an independent remedial action cleanup in 2012 and was issued a No Further Action (NFA) determination in 2012. Regulatory files regarding the details of the cleanup were provided by Ecology and are detailed below.

Farallon searched the Ecology Toxics Cleanup Program database (Ecology database) for the Site addresses, which indicated the Site was investigated after a release of 20 gallons of a two-part tire fill foam occurred in 2011. According the letter regarding Environmental Consultation Services and Remedial Excavation Observations, Blackstone Facility, 6820 – 176th Avenue NE, Redmond, Washington dated March 14, 2012, from Mr. Charles R. Lie of Terra Associates, Inc. to Mr. Tom Wunderlich summarizing the remedial excavation performed at the Site, a release from a damaged chemical tote resulted in the spill. Remedial activities included pressure washing the pavement at the location of the release, vacuuming approximately 612 gallons of water for off-Site treatment and disposal, and excavating and removing approximately 34 tons of contaminated soil. Two confirmation soil samples were collected from the base of the approximately 18-inch excavation to verify no remaining impacted soil remained. Farallon confirmed with Ecology that no further information was available and the Site received a NFA for the cleanup in April 2012.

Based on the reasonably ascertainable information, the NFA for the Blackstone-OTR release is a historical recognized environmental condition in connection with the Site. Additional information regarding the Site is provided in Section 4.5, Previous Environmental Studies.

## 6.2 ADJACENT AND OTHER FACILITY LISTINGS

Reported facilities within 0.25 mile up-gradient, 0.125 mile cross-gradient, or adjacent down-gradient of the Site are considered to have a potential to have impacted the Site. Facilities that were listed in the EDR Report but not identified as a reported facility (e.g., a facility listed as a hazardous waste generator but not as having had a release), and facilities that were listed as “Closed” were not considered to have a potential to have impacted the Site.

- **HO Sports**, south-adjacent to the Site and at a higher topographic elevation, was identified in the ALLSITES, CSCSL NFA, RCRA NonGen/NLR, FINDS, and ECHO databases. According to the EDR Report, the facility was verified as a non-generator of hazardous waste in 2003 with reported violations in 1992 relating to general hazardous waste handling and reporting. The facility was able to achieve compliance with all violations by 1993. Farallon searched the Ecology database for the facility, which indicated the facility was issued an NFA determination in 2016 after an independent remedial action program review confirmed non-halogenated solvents and unspecified petroleum products had been remediated from the facility in 1996. Regulatory files were not reviewed during completion of this report due to the time and/or cost constraints of this Phase I ESA; additional information may be available at Ecology. Based on the current regulatory status, this facility does not represent a recognized environmental condition in connection with the Site.
- **Car Wash Enterprises**, approximately 0.07 mile east-northeast of the Site and at a higher topographic elevation, was identified in the RCRA NonGen/NLR, FINDS, ECHO, ICR, VCP, ALLSITES, and CSCSL NFA databases. According to the EDR Report, the facility was a handler of hazardous materials, with no violations as of December 2003. Farallon searched the Ecology database for the facility, which indicated the facility has confirmed releases of non-halogenated solvents to soil and groundwater. The facility has remediated

benzene and gasoline from soil and groundwater at the facility, and is listed as “No Further Action Required.” The facility was issued an NFA determination in 2008. Regulatory files were not reviewed during completion of this report due to the time and/or cost constraints of this Phase I ESA; additional information may be available at Ecology. Based on the current regulatory status, this facility does not represent a recognized environmental condition in connection with the Site.

- **Twin Peaks Equipment and/or Sunbelt Rentals Inc**, approximately 0.12 mile east-northeast of the Site and at a higher topographic elevation, was identified in the RCRA NonGen/NLR, FINDS, ECHO, UST, CSCSL, LUST, and ALLSITES databases. According to the EDR Report, the facility was a handler of hazardous materials, with no violations as of December 2003. A diesel UST, a kerosene UST, and an unleaded gasoline UST installed in 1982 were removed from the facility. The facility has confirmed releases of benzene, non-halogenated solvents, diesel, and gasoline to soil and groundwater, and is listed as “Cleanup Started.” Farallon searched the Ecology database for the facility, which indicated a leaking UST notification was reported for the facility in 1999 and the facility is being cleaned up under independent action. Regulatory files were not reviewed during completion of this report due to the time and/or cost constraints of this Phase I ESA; additional information may be available at Ecology. Based on the current regulatory status, topographic location, and relative distance from the Site, this facility represents a recognized environmental condition in connection with the Site.

### **6.3 HISTORICAL AUTO STATIONS**

Reported historical auto and gasoline stations within 250 feet of the Site are considered to have a potential to have impacted the Site. The EDR Report did not identify historical auto stations, including former retail gasoline stations and/or auto repair facilities, within 250 feet of the Site.

### **6.4 HISTORICAL DRY CLEANING FACILITIES**

Reported historical dry cleaning facilities within 250 feet of the Site are considered to have a potential to have impacted the Site. The EDR Report did not identify historical dry cleaning facilities within 250 feet of the Site.

### **6.5 UNMAPPABLE LISTINGS**

EDR identified three facilities as “orphan sites” that EDR was unable to map due to inaccurate or inadequate address information. Farallon located these orphan sites and, according to the addresses provided by EDR, the facilities are not located within the respective search radii. The orphan sites located do not represent a recognized environmental condition in connection with the Site.

## **7.0 INTERVIEWS**

Farallon conducted interviews with individuals familiar with the Site and contacted relevant local governmental agencies to obtain additional Site information. The responses from the parties contacted are provided below.

### **7.1 INTERVIEW WITH SITE REPRESENTATIVE**

During the site reconnaissance, Farallon interviewed the owner of the Site, Ms. Tamera Wyland, on March 20, 2018. The following information was obtained from this interview:

- No known USTs are present on the Site.
- An aboveground fuel cube containing diesel fuel is present south of Building C. The AST is self-contained and there have been no spills or releases.
- Hazardous materials on the Site generally consist of janitorial cleaning supplies, tire mounting compounds, and equipment repair materials such as hydraulic oils and solvents for parts washers. No significant releases have occurred from the storage and handling of these materials.
- Utilities are provided by the local municipality. There is no natural gas service at the Site.
- Every building on the Site is connected to its own septic system. No sewer service is provided at the Site.
- The exterior areas of the Site are leased by various tenants for storage of cars and equipment.
- The Site formerly was owned by Puget Power (currently Puget Sound Energy).
- No reportable spills or releases have occurred on the Site.

Ms. Wyland stated that she had not been made aware of any pending, threatened, or past:

- Litigation relevant to hazardous substances or petroleum products in, on, or from the Site;
- Administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site; or
- Notices from a governmental entity regarding violations of environmental laws or liability relating to hazardous substances or petroleum products.

### **7.2 INTERVIEW WITH FIRE DEPARTMENT**

Farallon contacted the Redmond Fire Department on January 12, 2018 regarding previous and current ASTs and USTs at the Site. Records relating to the Site pertaining to the Redmond Fire Department were provided through the City of Redmond.

### **7.3 INTERVIEW WITH CITY**

Farallon contacted the City of Redmond on February 8, 2018 to inquire whether notices of violations and/or reported hazardous spills at the Site were on file, and regarding previous and current ASTs and USTs at the Site. A representative of the City of Redmond provided Farallon with fire incident reports for the Site, including multiple propane-related fires and/or leaks. A verbal warning was issued to Gregory Drilling in 2011 for equipment wash water discharging onto unpaved areas of the Site. Blackstone-OTR was investigated for leaking chemical totes on the southeastern portion of the Site in 2011. An investigation indicated the area of the release was limited in size and the totes were filled with EcoFil, an aromatic isocyanate prepolymer chemical used to fill tires. Contaminated soil was excavated and disposed of off the Site. Confirmation soil sampling indicated no further contamination was present on the Site. No groundwater sampling was performed. In 2015, a spill of a granite marble slurry was observed that reportedly discharged to soil and groundwater at the Site.

### **7.4 INTERVIEW WITH HEALTH DEPARTMENT**

Farallon contacted Public Health—Seattle & King County on February 9, 2018 to inquire whether notices of violations and/or reported hazardous spills at the Site were on file. Public Health—Seattle & King County provided Farallon with hazardous waste disposal records for Blackstone-OTR, Mr. Concrete, G & L Utility Contractors, Trendset Custom Pavers, Washington Diesel Service, Washington Hydraulics, and Gregory Drilling. The Site operators were noted as being in compliance with hazardous waste management practices.

## 8.0 SITE RECONNAISSANCE

Farallon conducted a site reconnaissance on March 20, 2018 to observe the Site for physical evidence of recognized environmental conditions. The methodology used for the site reconnaissance and the observations made during the reconnaissance are discussed below. A description of the Site is provided in Section 2.2, Site Description. Photographs taken during the site reconnaissance are presented in Appendix B.

### 8.1 SITE RECONNAISSANCE METHODOLOGY

Farallon completed a walk around the entire perimeter of the Site and inspected accessible interior portions of the Site buildings. There were no deviations from ASTM E1527-13 during the Phase I ESA. Limiting conditions encountered during this Phase I ESA were the presence of vehicles parked and materials and equipment stored on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site buildings that prevented Farallon from observing the entire interior floor surface. In addition, Farallon was not provided access to all interior and exterior tenant and storage spaces, and Farallon was unable to interview the tenants and operators of the Site to obtain detailed information regarding the storage and/or handling of hazardous substances. These limiting conditions may hinder the conclusions of this report.

### 8.2 SITE RECONNAISSANCE OBSERVATIONS

Weather conditions at the time of the reconnaissance were sunny, with a temperature of approximately 45 degrees Fahrenheit. No weather-related Site-access restrictions were encountered during the reconnaissance.

The Site comprises King County Parcel Nos. 122505-9095, 122505-9152, and 122505-9229, which total 4.88 acres of land developed with Buildings A through D. Remaining areas of the Site consist of paved and unpaved parking areas and areas used for the storage of tires, equipment, and machinery. Access to the Site is gained from 176<sup>th</sup> Avenue Northeast, west of the Site.

#### 8.2.1 Interior Observations

Farallon's observations of the interior of the Site buildings during the site reconnaissance are documented in the table below. Comments pertaining to notable interior observations follow in Section 8.2.2. Photographs taken during the site reconnaissance are provided in Appendix B.

## 8.2.2 Interior Observation Comments

### Heating/Cooling System

The Site buildings are heated by electricity and natural gas, which are provided by Puget Sound Energy.

### Staining and/or Corrosion

At the time of site reconnaissance, significant petroleum staining was observed on the floor of Building C throughout the Washington Hydraulic tenant space, which is used for equipment and engine repair operations. The staining on the concrete floor appeared to be from spills and releases related to the improper storage and handling of hazardous substances and petroleum products, including hydraulic oils and solvent-based parts cleaners. Farallon also observed staining on the concrete floor of Building B within and adjacent to the secondary containment area used to store various tire mounting compounds and isopropyl alcohol. The staining appeared to be from minor spills and releases due to handling of the materials. The potential release of hazardous substances from observed staining in connection with current operations in Buildings B and C on the Site represent a recognized environmental condition in connection with the Site.

### Discharge Area

In Building A, Farallon observed wastewater from a wet saw discharging to a floor drain and being directed to an aboveground water filtration system along the western exterior of the building. Reportedly, water that passes through the filtration system is reused.

### **Drum(s) and/or Other Container(s)**

Farallon observed containers of hazardous substances throughout accessible areas of interior portions of the Site buildings. Hazardous substances observed in Building A included minor amounts of maintenance-related products, granite and stone sealers, and janitorial supplies stored in containers of 5 gallons or less. No significant staining was observed in the vicinity of the containers. Hazardous substances observed in Building B included several 55-gallon drums and 220-gallon totes of various tire mounting compounds and isopropyl alcohol, in addition to containers of maintenance-related products stored in containers of 5 gallons or less. Staining was observed within Building B, as discussed above.

Hazardous substances observed in Building C included the storage and handling of significant quantities of new and waste hydraulic fluids, in addition to multiple solvent-based parts cleaners. Evidence of improper storage and significant staining was observed in the Building C Washington Hydraulic tenant space, as discussed above. Other materials observed in Building C included concrete stain in powder form. The material is stored in 5-gallon containers and reportedly is not used on the Site. Farallon was not provided with access to the interior portion of Building D. The potential release of hazardous substances in connection with current operations on the Site represents a recognized environmental condition in connection with the Site.

### **Hazardous Material(s) and/or Petroleum Product(s)**

Farallon observed hazardous substances stored throughout the Site buildings, as discussed above.

### **Hazardous Waste**

Farallon observed waste hydraulic oils in Building C, as discussed above.

#### **8.2.3 Exterior Observations**

Farallon's observations of the exterior of the Site during the site reconnaissance are documented in the table below. Comments pertaining to notable exterior observations follow in Section 8.2.4. Photographs taken during the site reconnaissance are provided in Appendix B.

## 8.2.4 Exterior Observation Comments

### Staining and/or Corrosion

Farallon observed de minimis petroleum staining in localized areas of the Site that appeared to be from parked vehicles and equipment, and the improper storage of containers that appeared to contain petroleum products and other unknown materials. Several unlabeled 55-gallon drums were observed stored north and west of Building A. Farallon observed evidence of significant staining beneath and in the vicinity of several of the drums. The potential release of hazardous substances in connection with the improper storage of containers and evidence of localized releases from current operations represents a recognized environmental condition in connection with the Site.

### Storage Tank(s), Vent Pipe(s), and/or Fuel Port(s)

An aboveground fuel storage tank (i.e., fuel cube) was observed south of Building C. The cube contained approximately 300 gallons of diesel fuel and was self-contained, with no evidence of a release. Farallon also observed approximately sixteen 10-gallon portable tanks of propane stored in a locked cabinet east of Building B. Additionally, an AST used to store recycled water from the granite filtration system discussed above was observed along the western exterior of Building A.

### Drum(s) and/or Other Container(s)

Farallon observed several containers of various sizes ranging from 1-gallon containers to 220-gallon totes throughout the Site. The containers were used to store tire mounting compounds, new and waste petroleum-based products, gasoline, and propane. Numerous containers were not labeled, and the contents are unknown. Staining and evidence of releases were observed around various containers throughout the Site, as discussed above.

**Hazardous Material(s) and/or Petroleum Product(s)**

Farallon observed various hazardous materials stored throughout the Site, as discussed above.

**Hazardous Waste**

Farallon observed various containers of waste petroleum-based products and unlabeled drums throughout the Site, as discussed above.

**Domestic Water**

Domestic water is supplied to the Site buildings by the City of Redmond.

**Septic/Sewer System**

According to the Site representative, sanitary sewage generated at the Site discharges to a separate septic system for each Site building. Based on the known current and historical uses of the Site, hazardous materials could have been disposed of from interior building connections to the Site septic systems. The potential release of hazardous substances to Site septic systems represents a recognized environmental condition in connection with the Site.

**Stormwater**

Stormwater on the Site infiltrates into the ground surface.

## 9.0 FINDINGS AND OPINIONS

Limiting conditions encountered during this Phase I ESA were the presence of vehicles parked and materials and equipment stored on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site buildings that prevented Farallon from observing the entire interior floor surface. In addition, Farallon was not provided access to all interior and exterior tenant and storage spaces, and Farallon was unable to interview the tenants and operators of the Site to obtain detailed information regarding the storage and/or handling of hazardous substances. These limiting conditions may hinder the conclusions of this report.

Farallon was unable to interview the tenants and operators of the Site to obtain detailed information regarding the storage and/or handling of hazardous substances. The insufficient information regarding the storage and handling of hazardous substances on the Site is a data gap for this report. The potential release of hazardous substances in connection with Site operations represents a recognized environmental condition in connection with the Site.

At the time of the site reconnaissance, Farallon observed significant petroleum staining on the interior floors of Buildings B and C, which appeared to be from spills and releases related to the improper storage and handling of hazardous substances and petroleum products, including hydraulic oils, solvent-based parts cleaners, various tire mounting compounds, and isopropyl alcohol. The potential release of hazardous substances from current operations on the Site represents a recognized environmental condition in connection with the Site.

The potential release of hazardous substances in connection with the improper storage of containers and evidence of localized releases from current operations represents a recognized environmental condition in connection with the Site. According to the Site representative, sanitary sewage generated at the Site discharges to a separate septic system for each Site building. Based on the known current and historical uses of the Site, hazardous materials could have been disposed of from interior building connections to the Site septic systems. The potential release of hazardous substances to Site septic systems represents a recognized environmental condition in connection with the Site.

Historically, the Site appeared developed with three warehouse structures and a residential structure from at least 1980 through the present, based on aerial photographs reviewed. Piles of building materials, machinery, shipping containers, drums, and/or equipment appeared throughout the Site from 1980 to the present. The majority of the Site appeared unpaved until around 2007, when the southeastern portion of the Site appeared paved in aerial photographs. City directory listings for the Site address included a residential listing in 1976 and 1981 and industrial and

commercial listings from 1981 to 2014. The potential releases of hazardous materials associated with current and historical operations on the Site represent a recognized condition in connection with the Site.

Farallon was provided with the 1994 Phase II report, which indicated a previous environmental assessment performed in January 1994, not provided to Farallon, identified TPH as diesel- and as oil-range organics at concentrations exceeding MTCA cleanup levels at the Site. No groundwater samples were collected during the January 1994 investigation. The 1994 Phase II report concluded the extent of contamination encountered during the 1994 Phase II ESA was limited, was not highly mobile, and did not appear to contaminate groundwater, although they noted their findings were limited and recommended further Site screening. Based on Farallon's review of reasonably ascertainable information, the potential release of hazardous substances associated with current and historical operations on the Site represents a recognized environmental condition in connection with the Site.

The EDR Report identified the Site address in several databases. A release from a damaged chemical tote resulted in a chemical spill on the Site in 2011. Farallon searched the Ecology database for the Site, which indicated remedial activities were conducted to clean up and dispose of the contaminated soil, and Ecology issued an NFA determination for the Site in 2012. Based on the information that was reasonably ascertainable, the NFA for this release is a historical recognized environmental condition in connection with the Site.

In 2018, Farallon conducted multiple phases of subsurface investigation at the Site. The subsurface investigation included: observation and soil sampling of six geotechnical borings; advancement of six borings and collection of soil and reconnaissance groundwater samples; installation of four monitoring wells and collection of soil and reconnaissance groundwater samples; and a groundwater monitoring event conducted at the three existing and four new monitoring wells. TPH as oil-range organics was detected at concentrations exceeding the MTCA Method A cleanup level in a single soil sample collected at a depth of 5 feet bgs from a boring advanced in the central portion of the Site. The confirmed releases of TPH as oil-range organics represent a recognized environmental condition in connection with the Site.

During the 2018 subsurface investigation, low concentrations of TPH, tetrachloroethene, and lead that were less than the regulatory cleanup levels were detected in several soil samples collected at the Site. Although the concentrations of TPH, tetrachloroethene, and lead in soil detected at the Site do not require cleanup under MTCA, soil containing low concentrations of TPH, tetrachloroethene, and/or lead will require special handling and disposal off the Site to an approved facility in accordance with the Ecology guidance and regulations, if excavated during future redevelopment.

Low concentrations of TPH as oil-range organics were detected in a single groundwater sample collected from a shallow groundwater-bearing zone encountered at the Site. The remaining constituents of potential concern were reported non-detect.

The EDR Report identified several facilities adjacent or proximate to the Site in the regulatory databases reviewed. Several of these facilities have known or suspected releases of hazardous substances to soil and/or groundwater. Regulatory files for facilities in the vicinity of the Site were not reviewed due to the time and/or cost constraints of this Phase I ESA; additional information may be available at Ecology. Based on the current regulatory status, topographic location, and/or relative distance from the Site, these listings represent a recognized environmental condition in connection with the Site.

## 10.0 CONCLUSIONS

Farallon conducted a Phase I ESA for the Marymoor Apartments property at 17611 Northeast 70<sup>th</sup> Street in Redmond, Washington in conformance with the scope and limitations of ASTM E1527-13. Any exceptions to or deletions from this practice are described in Section 1.5, Deviations.

This assessment identified the following recognized environmental conditions in connection with the Site:

- The known and potential release of hazardous substances associated with current and historical operations on the Site; and
- The potential migration of hazardous substance to the Site from operations at properties in the vicinity of the Site.

## 12.0 LIMITATIONS

### 12.1 GENERAL LIMITATIONS

The conclusions contained in this report/assessment are based on professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location. The conclusions contained herein are subject to the following inherent limitations:

- **Accuracy of Information.** Farallon obtained, reviewed, and evaluated certain information used in this report/assessment from sources that were believed to be reliable. Farallon's conclusions, opinions, and recommendations are based in part on such information. Farallon's services did not include verification of its accuracy or authenticity. Should the information upon which Farallon relied prove to be inaccurate or unreliable, Farallon reserves the right to amend or revise its conclusions, opinions, and/or recommendations.
- **Reconnaissance and/or Characterization.** Farallon performed a reconnaissance and/or characterization of the Site that is the subject of this report/assessment to document current conditions. Farallon focused on areas deemed more likely to exhibit hazardous materials conditions. Contamination may exist in other areas of the Site that were not investigated or were inaccessible. Site activities beyond Farallon's control could change at any time after the completion of this report/assessment.

For the foregoing reasons, Farallon cannot and does not warrant or guarantee that the Site is free of hazardous or potentially hazardous substances or conditions, or that latent or undiscovered conditions will not become evident in the future. Farallon's observations, findings, and opinions can be considered valid only as of the date of the report.

This report/assessment has been prepared in accordance with the contract for services between Farallon and Lennar Multifamily Communities, LLC, and currently accepted industry standards. No other warranties, representations, or certifications are made.

### 12.2 LIMITATION ON RELIANCE BY THIRD PARTIES

**Reliance by third parties is prohibited.** This report/assessment has been prepared for the exclusive use of Lennar Multifamily Communities, LLC to address the unique needs of Lennar Multifamily Communities, LLC at the Site at a specific point in time.

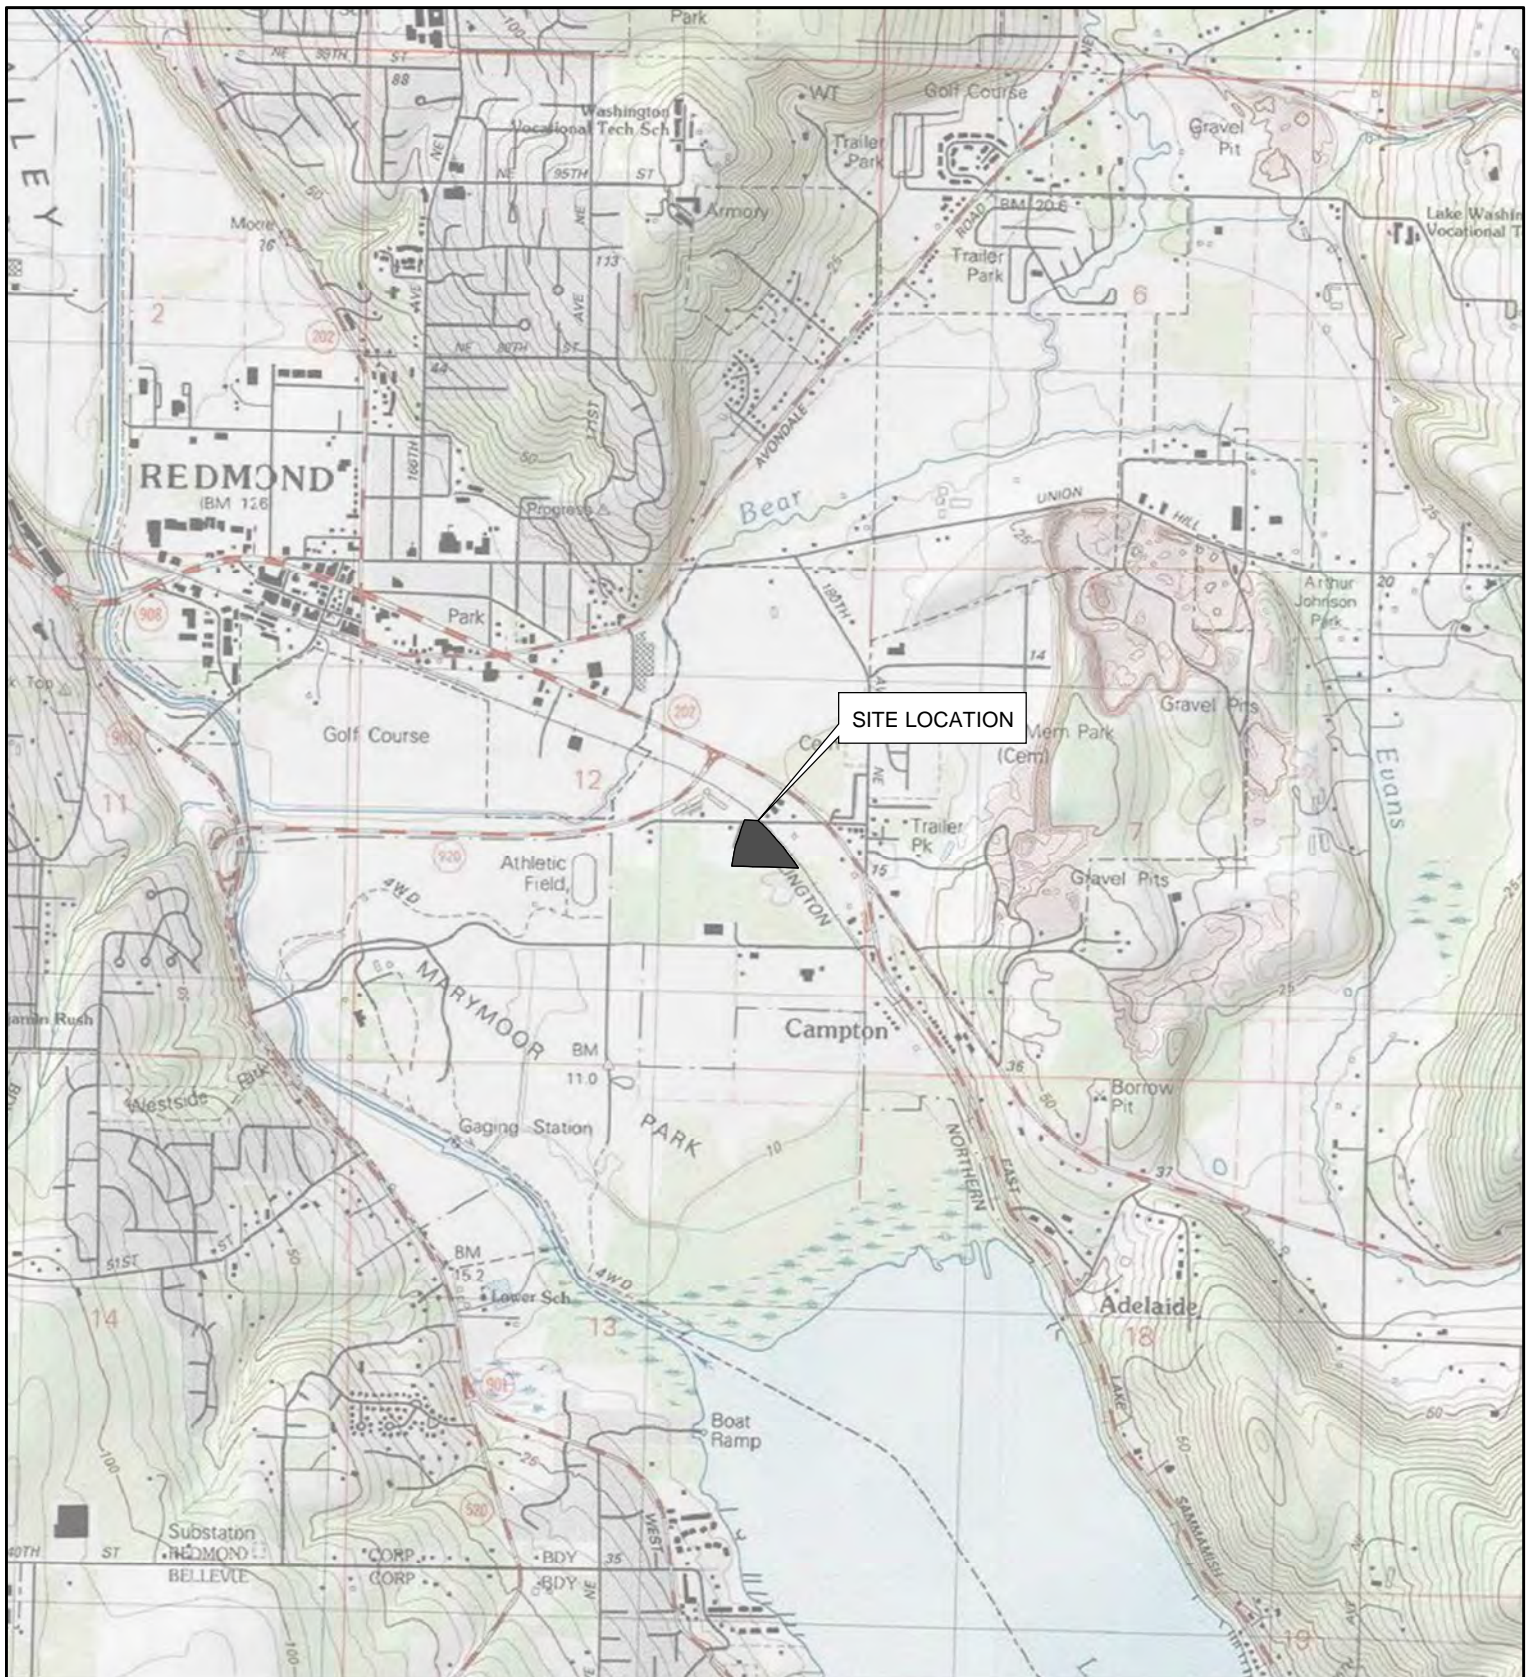

This is not a general grant of reliance. No one other than Lennar Multifamily Communities, LLC may rely on this report unless Farallon agrees in advance to such reliance in writing. Any unauthorized use, interpretation, or reliance on this report/assessment is at the sole risk of that party, and Farallon will have no liability for such unauthorized use, interpretation, or reliance.

Comments

**(1) Environmental cleanup liens that have been filed or recorded against the Site (Part 312.25 of Title 40 of the Code of Federal Regulations [40 CFR 312.25])**

Are you aware of any environmental cleanup liens against the Site that have been filed or recorded under federal, tribal, state, or local law?

No

**(2) Activity and land use limitations that are in place at the Site or that have been filed or recorded in a registry (40 CFR 312.26)**

Are you aware of any activity and land use limitation (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

NO

**(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)**

As the user of the Phase I ESA Report, do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupant(s) of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No

**(4) Relationship of the purchase price to the fair market value of the Site if it were not contaminated (40 CFR 312.29)**

Does the purchase price being paid for this Site reasonably reflect the fair market value of the Site? If you conclude that there is a difference between the purchase price and the fair market value, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?

Yes, purchase price reflects a clean site

**(5) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)**

Are you aware of commonly known or reasonably ascertainable information about the Site that would help Farallon Consulting, L.L.C. to identify conditions indicative of a chemical or other release or threatened release? For example, as user of the Phase I ESA Report:

Do you know the past use(s) of the Site? (If yes, please specify.)

No

Do you know of a specific chemical(s) present at the Site, or present at one time? (If yes, please specify.)

Do you know of a chemical and/or other spill(s) or release(s) that have taken place at the Site? (If yes, please specify.)

No

Do you know of any environmental cleanup(s) that have taken place at the Site? (If yes, please specify.)

No

**(6) The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)**

As the user of the Phase I ESA Report, based on your knowledge and experience related to the Site, is there any obvious indicator(s) that point to the presence or likely presence of contamination at the Site? (If yes, please specify.)

Existing industrial uses

**Identify all parties who will rely on the Phase I ESA Report, including:**

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 10/17/2017 has revealed that there are 14 WA CSCSL sites within approximately 1 mile of the target property.

### State and tribal Brownfields sites

WA BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the WA BROWNFIELDS list, as provided by EDR, and dated 01/18/2017 has revealed that there is 1 WA BROWNFIELDS site within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 10/17/2017 has revealed that there are 9 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 33 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

**AIR EMISSIONS CLASSIFICATION UNKNOWN**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Form Comm: When products are damaged, recalled or returned by a guest, these  
products may need to be sent out as hazardous waste. Target stores  
normally operate as small quantity generators (SQG) as defined in 40  
CFR 262.34. However, Target retails pharmaceuticals and  
over-the-counter (OTC) products that when sent out as a waste may be  
considered a p-listed waste. These episodic events may exceed 2.2  
pounds in a single shipment. In December 2015, Target sold all  
pharmacy operations to CVS Health. Target continues to retail OTC  
products that may continue to be considered P-listed waste.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Form Comm: During cleaning of City Well #5 located at the above address elemental mercury was observed in sediments removed from the bottom of the well. Elemental mercury was released to surficial soils adjacent to the well. It was also assumed that elemental mercury found was released from a seal in the well pump and that approximately 3 lbs. of elemental mercury remains in the bottom of the well in the tail pipe. The contaminated sediment released to ground was excavated sealed in steel drums and sent to a hazardous waste site. The elemental mercury remaining at the bottom of the well in the tail pipe was capped with concrete. A report titled Well 5 Environmental Response was sent to Brian Sato DOE and to WDOH by Golder and Associates the City's

Registry ID: 110005391995

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

**FINDS:**

Registry ID: 110000829211

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Waste Stream Comments:**

Facility ID: 98493189  
Data Year: 2006  
Comments: Acidic aqueous waste less than 5% acid (diluted but pH less than 2) with less than 55% non-halogenated solvent.

Facility ID: 98493189  
Data Year: 2006  
Comments: Old fuel for emergency generators.

Facility ID: 98493189  
Data Year: 2006  
Comments: "Per the instructions on p.46 of 2006 Forms, Instructions and Guidance, we were able to estimate the quantity of the waste contents of the lab pack(s), excluding the containers. The total amount shipped as it appeared on the manifests inclusive of packaging was 300 lbs (5 lbs. to AZD009015389 and 295 lbs. to CAD009452657). The following were rounded up to 1.00: Manifest 23438028 from 1 gram, manifest 23438028 from 0.02 lbs, manifest 22421569 from 0.93, and manifest 23437319 from 0.01 lbs."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Biennial Reports:**

Last Biennial Reporting Year: 2017

**Annual Waste Handled:**

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 24678

Waste code: D003  
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Annual Waste Handled:**

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 3066

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. **Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

### ***Federal Delisted NPL site list***

#### Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

#### SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

### ***Federal CERCLIS NFRAP site list***

#### SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

### RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### TACOMA/PIERCE COUNTY:

#### Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### NATIONAL WETLAND INVENTORY

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## **TOPOGRAPHIC INFORMATION**

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## **HYDROLOGIC INFORMATION**

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Listing

Source: Department of Natural Resources

Telephone: 360-902-1450

Locations that represent oil and gas test well sites in Washington State from 1890 to present.

### RADON

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.
