Introduction

This Transportation Impact Analysis (TIA) summarizes the potential transportation-related impacts associated with the proposed mixed-use development located immediately west of Willows Road NE and south of NE 124th Street in the City of Redmond. As necessary, mitigation measures are identified that would offset or reduce significant impacts.

Project Description

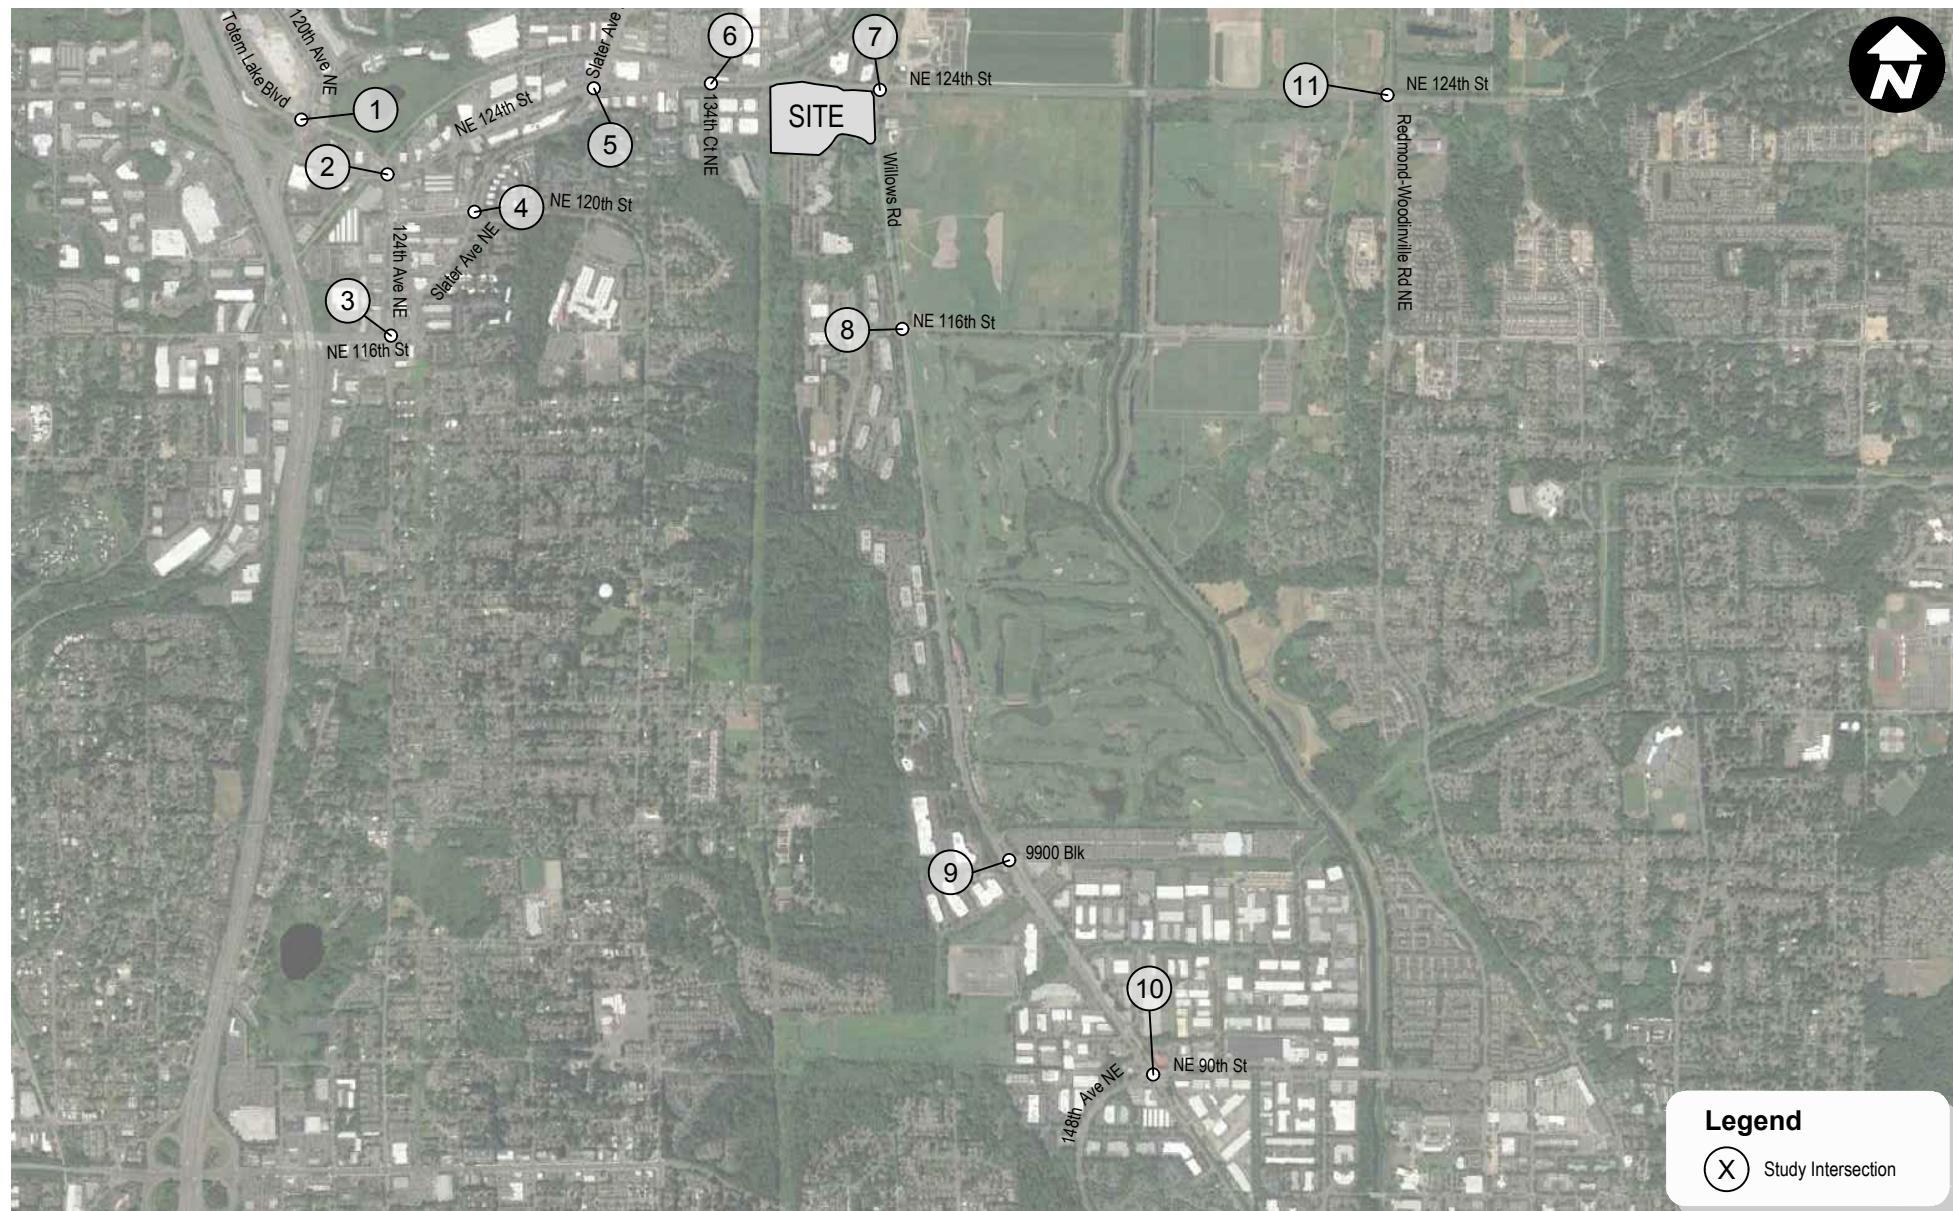

The proposed development project would include 195 apartment units, 175 townhouse units, and 22,500 square feet (sf) of commercial space, including approximately 9,000 sf of office space, an 8,500-sf daycare, and 5,000 sf of retail space. Potential transportation-related impacts are evaluated as part of the City of Redmond's Master Planning and Development Agreement process.

Two access points are proposed with one full turning-movement access via NE 124th Street and one right-in/right-out only access via Willows Road NE. The proposed NE 124th Street access would be controlled with a traffic signal and align with the existing commercial driveway ("Willows 124") to the north. The project site is currently undeveloped.

The site vicinity and study intersections are shown in Figure 1. A preliminary site plan is shown in Figure 2. The development is anticipated to be completed and fully occupied by the end of 2021.

Scope of Analysis

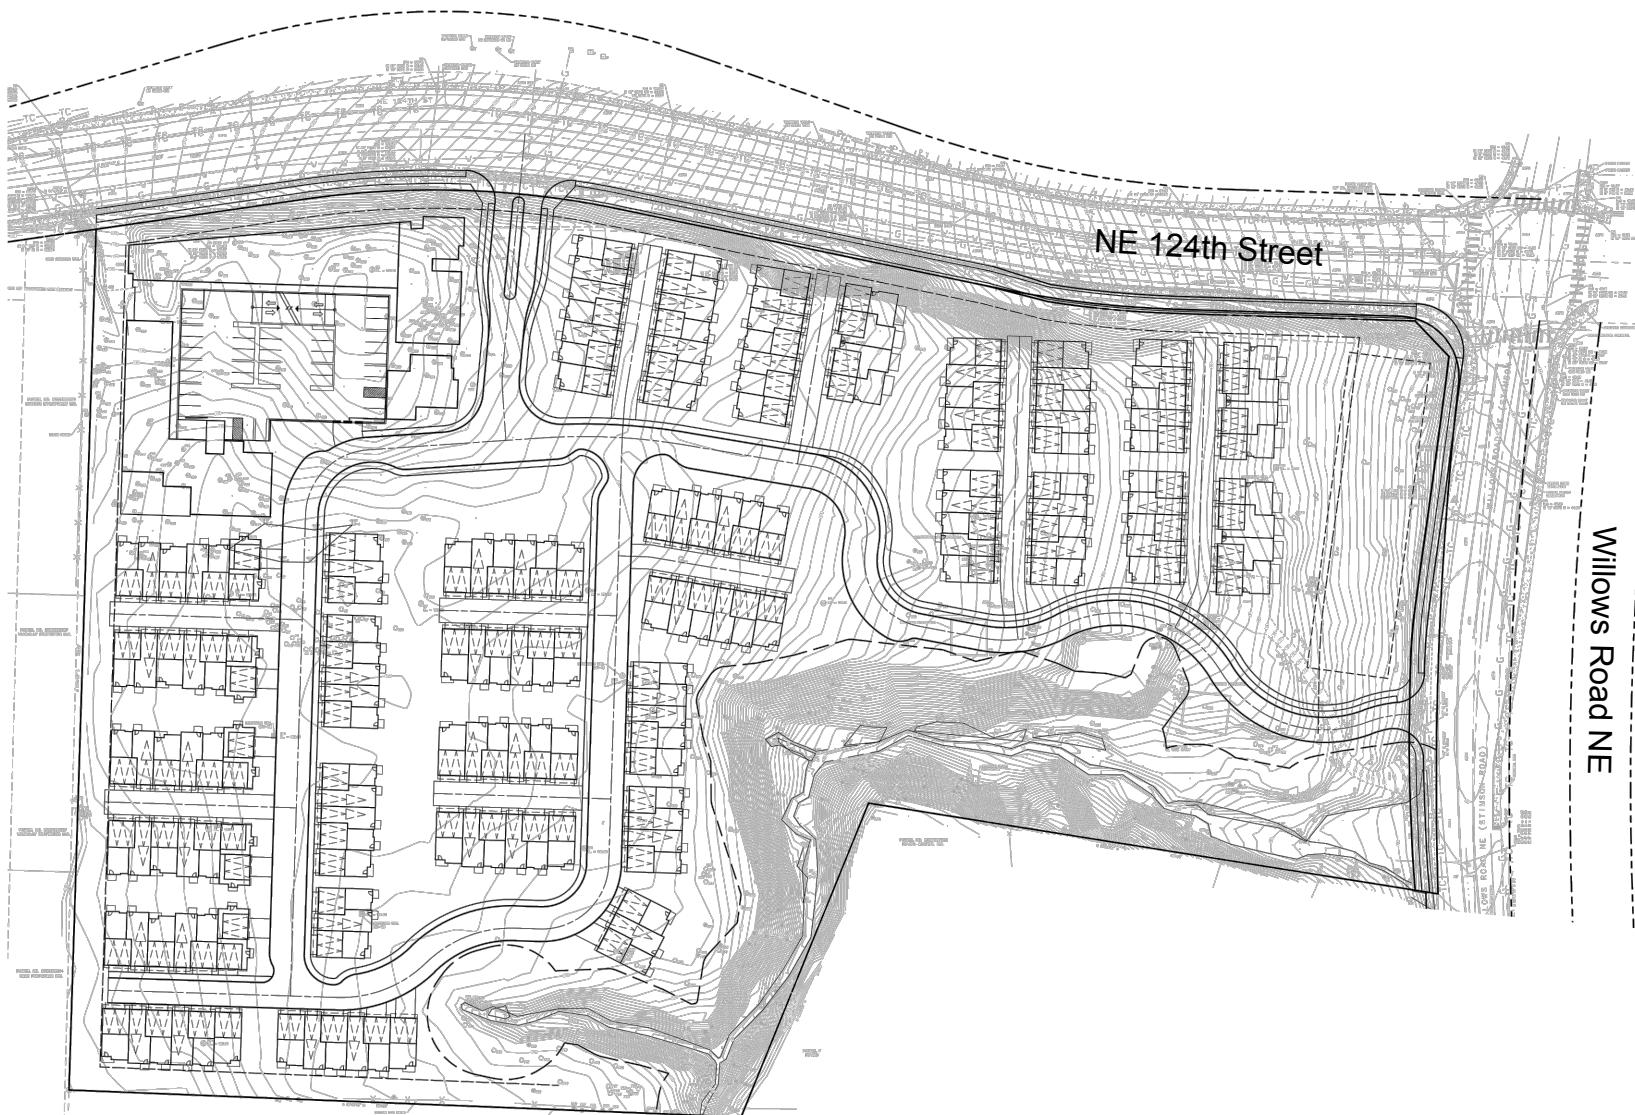

The TIA begins by summarizing existing conditions, including the street system, non-motorized and transit facilities, traffic volumes, traffic operations and traffic safety. Next, forecast conditions are summarized which include future traffic volumes, project trip generation, trip distribution and assignment, with-project traffic operations, site access analysis, and school walk routes. The TIA concludes with an executive summary and a discussion of mitigation measures.

Site Vicinity & Study Intersections

Preliminary Site Plan

Proctor Willows

FIGURE

Existing Conditions

This section summarizes existing conditions within the study area defined for this analysis.

Study Area

Considering that the project site is located on the border between the Cities of Redmond and Kirkland, coordination with both jurisdictions was required to determine the study area. Through coordination with the City of Redmond, development review staff identified the following four signalized intersections for analysis:

- Willows Road NE / NE 116th Street
- Willows Road NE / 9900 Block-NE 100th Court
- Willows Road NE / 148th Avenue NE
- Redmond-Woodinville Road NE / NE 124th Street

In addition, through coordination with the City of Kirkland, development review staff identified the following seven signalized intersections for analysis:

- 120th Avenue NE / Totem Lake Boulevard
- Totem Lake Boulevard / NE 124th Street
- 124th Avenue NE / NE 116th Street
- Slater Avenue NE / NE 120th Street
- Slater Avenue NE / NE 124th Street
- 134th Court NE / NE 124th Street
- Willows Road NE / NE 124th Street

In addition to these 11 off-site study intersections, the two proposed site access driveways were analyzed for future with-project conditions.

Street System

The primary roadways within the study area and their characteristics near study intersections are described in Table 1.

Table 1. Existing Conditions Summary

Roadway	Street Classification ¹	Speed Limit	No. of Lanes	Pedestrian Facilities	Bicycle Facilities
Totem Lake Blvd	Secondary Arterial	35	5	Sidewalks Both Sides	None
120th Ave NE	Collector Arterial	25	3-4	Sidewalks on East Side	None
NE 124th St	Primary Arterial	35	5-6	Sidewalks Both Sides	None
124th Ave NE	Primary Arterial	35	3-4	Sidewalks Both Sides	None
NE 116th St	Secondary Arterial	25	5	Sidewalks Both Sides	Bike Lanes
Slater Ave NE	Collector Arterial	35	3	Sidewalks Both Sides	Bike Lanes
NE 120th St	Secondary Arterial	35	3	Sidewalks Both Sides	Bike Lanes
Willows Road NE	Minor Arterial	45	3-5	Intermittent	Bike Lanes
Redmond-Woodinville Rd	Principal Arterial	40	2-4	Intermittent	None
NE 90th St-148th Ave NE	Principal Arterial	30-40	3-5	Sidewalks Both Sides	None

1. As classified per the City of Redmond or City of Kirkland

Non-Motorized Facilities

As shown in Table 1, most roadways in the City of Kirkland (west of the project site) have sidewalks on both sides of the street. Immediately east of the project site on Willows Road NE, sidewalks are intermittent on either side. Further east and south of the site, Redmond-Woodinville Road provides intermittent sidewalks on both sides and NE 90th Street-148th Avenue NE provides sidewalks on both sides of the street.

In terms of bicycle facilities, on-street bicycle lanes exist on NE 116th Street, Slater Avenue NE, NE 120th Street and Willows Road NE. In addition, the soft-surface Cross Kirkland Corridor (CKC) trail exists approximately one-half mile west of the project site and runs between the Totem Lake Business District and South Kirkland Park & Ride. The hard-surface Sammamish River Trail exists approximately one-half mile east of the project site and runs between Blythe Park in Bothell to Marymoor Park and can be accessed via NE 124th Street.

Transit Facilities

Three transit routes, operated by King County Metro, are provided within walking distance of the project. The nearest transit stop is located on the south side of NE 124th Street west of Willows Road NE, immediately north of the project site. The three routes provided are summarized below:

Route 243 is a commuter route that operates between Overlake Transit Center and Kenmore Park and Ride on weekdays only. The route provides service only during the AM peak period (5:30 a.m. – 7:00 a.m.) and PM peak period (5:30 p.m. – 7:00 p.m.). with 30-minute headways for both peak periods.

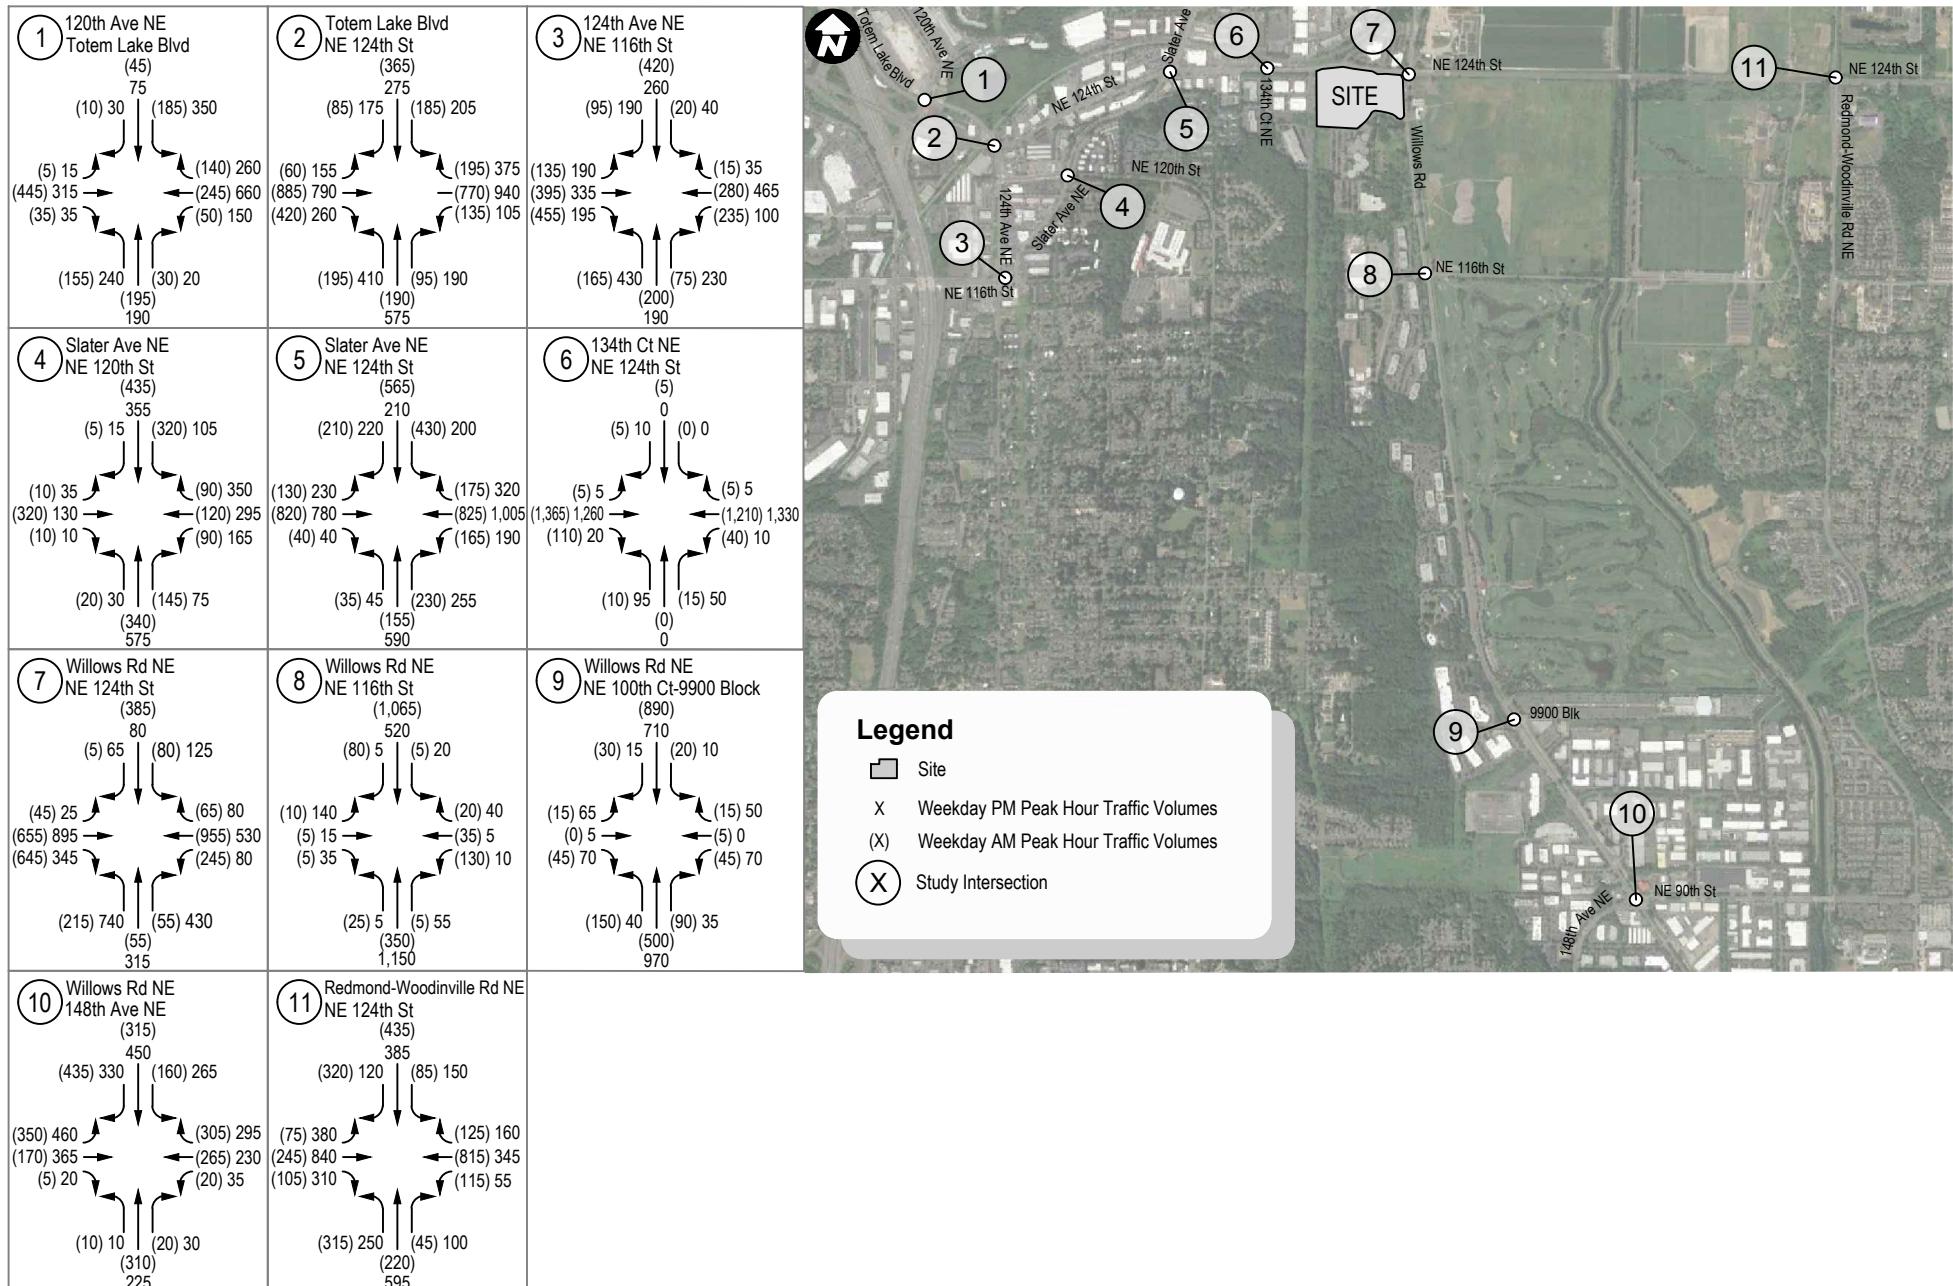

Route 244 is a commuter route that operates between Overlake Transit Center and Kenmore Park and Ride on weekdays only. The route provides service only during the AM peak period (6:30 a.m. – 8:30 a.m.) and PM peak period (4:00 p.m. – 6:00 p.m.). with 30-minute headways for both peak periods.

Route 930 is a commuter route that operates between Redmond Town Center and Kingsgate Park and Ride on weekdays only. The route provides service only during the AM peak period (6:00 a.m. – 10:00 a.m.) and PM peak period (2:00 p.m. – 6:00 p.m.). with 30-minute headways for both peak periods. King County Metro has identified Route 930 as a high priority (No. 5) for service growth in its *2018 System Evaluation Report*.

King County Metro's North Eastside Mobility Project finalized recommendations in late-2018 for expanding and improving transit service in the north Eastside area. They included replacing Routes 243 and 244 and providing additional service to Route 930 with peak and midday service between 6 a.m. and 7 p.m. with 30-minute headways. In addition, riders could use new Route 225 in place of Route 244 as it would provide new all-day service between Overlake and Kenmore with 30-minute headways during the weekday peak and midday hours and 60-minute headways on weekday nights and on the weekends. These recommendations will be submitted to the King County Council in early 2019 and if adopted, changes to existing bus service would take effect in September 2019.

Traffic Volumes

Traffic counts at the 11 study intersections were collected during the weekday AM and PM peak periods on a typical weekday in November 2018. Detailed intersection traffic counts are included in Appendix A. Existing traffic volumes are shown in Figure 3. Traffic volumes were rounded to the nearest five vehicles since weekday volumes fluctuate day-to-day.

Existing Weekday AM and PM Peak Hour Traffic Volumes

Proctor Willows

Traffic Operations

A level of service (LOS) analysis was conducted for the study area intersections for the weekday AM and PM peak hours. All study intersections were analyzed using *Synchro 9*. This software program provides an analysis based on methodologies presented in the *Highway Capacity Manual* (HCM) (Transportation Research Board, 2010 Edition).

LOS values range from LOS A, which indicates good operating conditions with little or no delay, to LOS F, which indicates congestion and long vehicle delays. LOS is measured in terms of total average intersection delay for signalized intersections. LOS is measured in terms of the average delay for the worst minor street movement for stop sign-controlled intersections such as the proposed driveway on Willows Road NE. A more detailed explanation of LOS criteria is provided in Appendix B.

Signal timing settings were provided by the Cities of Redmond and Kirkland. Detailed LOS worksheets for these intersections are included in Appendix C. LOS results using existing intersection control and signal timing plans are summarized in Table 2.

The Cities of Redmond and Kirkland both currently have an intersection LOS standard of LOS D or better. The Redmond-Woodinville Road / NE 124th Street intersection is the one exception within the study area because Redmond-Woodinville Road is also State Route (SR) 202 and designated a regionally significant state highway (a.k.a. non-highway of statewide significance (HSS)). Per House Bill 1487, the Puget Sound Regional Council (PSRC) adopted a LOS E or better standard for SR 202 facilities located in the Cities of Redmond and Woodinville. The PSRC states that “local jurisdictions should...ensure the adopted LOS standards in their transportation elements are consistent with the LOS standards for non-HSS and HSS state routes.”¹

Table 2. Existing Level of Service Summary

Intersection	Weekday AM Peak Hour		Weekday PM Peak Hour	
	LOS ¹	Delay ²	LOS	Delay
1. 120th Ave NE / Totem Lake Blvd	B	17	C	23
2. Totem Lake Blvd / NE 124th St	D	43	D	50
3. 124th Ave NE / NE 116th St	D	36	D	38
4. Slater Ave NE / NE 120th St	C	34	F	94
5. Slater Ave NE / NE 124th St	F	95	E	70
6. 134th Court NE / NE 124th St	A	2	A	7
7. Willows Road NE / NE 124th St	D	45	D	45
8. Willows Road NE / NE 116th St	C	25	B	14
9. Willows Road NE / 9900 Block	B	10	B	12
10. Willows Road NE / 148th Ave NE	D	45	D	47
11. Redmond-Woodinville Road / NE 124th St ³	D	38	E	69

1. Level of service based on 2010 *Highway Capacity Manual* methodology

2. Average delay in seconds per vehicle

3. LOS standard of LOS E or better per PSRC

As shown in Table 2, all study intersections operate at the LOS D or better during the existing AM peak hour and meet applicable LOS standards except for Slater Avenue NE / NE 124th Street. During the existing PM peak hour, the two study intersections on Slater Avenue NE currently operate at LOS E or F and do not meet the City of Kirkland’s LOS Standard of LOS D or better. The remaining nine intersections currently meet applicable LOS standards during the PM peak hour.

¹ <https://www.psrc.org/level-of-service>

Traffic Safety

Collision records were reviewed within the study area to document any potential traffic safety issues. The most recent complete set of annual collision data from WSDOT is for the three-year period between January 1, 2015 and December 31, 2017.

A summary of the total and average annual number of reported collisions as well as the collisions rate at each study intersection is provided in Table 3. In addition to the study intersections, the segment on NE 124th Street between Willows Road NE and 134th Court NE was also reviewed. The collision rate is representative of the average number of collisions per one million entering vehicles (MEV) at each intersection. Intersections with a rate greater than 1.0 collision per MEV are typically flagged for further investigation to determine whether an adverse condition exists.

For additional safety analysis, the critical crash rate was also calculated for each intersection. Critical crash rates are crash rates that have been statistically adjusted, based on other roads with similar characteristics, to remove the elements of chance and randomness. This is a check to determine if the rate at a location is significantly higher than a predetermined average rate for locations of similar characteristics. Based on the methodology found in Chapter 4 of the *Highway Safety Manual* (AASHTO, 2010), observed collisions per MEV and critical crash rates at each study intersection were compared to identify where observed rates were higher than the calculated critical rate.

Table 3. Collision Summary (2015 - 2017)

Intersection	Collisions Per Year			Annual Average	Collisions Per MEV ¹	Critical Crash Rate
	2015	2016	2017			
1. 120th Ave NE / Totem Lake Blvd	4	4	4	4.0	0.47	0.76
2. Totem Lake Blvd / NE 124th St	7	11	6	8.0	0.49	0.69
3. 124th Ave NE / NE 116th St	19	11	5	11.7	1.04	0.73
4. Slater Ave NE / NE 120th St	10	4	7	7.0	0.95	0.78
5. Slater Ave NE / NE 124th St	9	8	6	7.7	0.53	0.70
6. 134th Court NE / NE 124th St	5	1	0	2.0	0.20	0.74
7. Willows Road NE / NE 124th St	10	15	4	9.7	0.71	0.71
8. Willows Road NE / NE 116th St	2	3	2	2.3	0.32	0.78
9. Willows Road NE / 9900 Block	1	3	1	1.7	0.22	0.78
10. Willows Road NE / 148th Ave NE	8	1	0	3.0	0.30	0.74
11. Redmond-Woodinville Road / NE 124th St ³	4	4	4	4.0	0.30	0.71
Segment						
NE 124th St (Willows Road NE to 134th Ct NE)	1	1	3	1.7		

1. MEV = one million entering vehicles

As shown in the table above, all study intersections are at or below 0.53 collisions per MEV except for 124th Avenue NE / NE 116th Street, Slater Avenue NE / NE 120th Street, and Willows Road NE / NE 124th Street which are at 1.04, 0.95, and 0.71 collisions per MEV respectively. Considering the typical 1.0 collision per MEV rate threshold, the intersection of 124th Avenue NE / NE 116th Street is flagged for additional review.

When considering the critical crash rates, the 124th Avenue NE / NE 116th Street and Slater Avenue NE / NE 120th Street intersections were also the only intersections where the observed crash rate was greater than the critical crash rate. Of the 35 total collisions that occurred at the intersection of 124th Avenue NE / NE 116th Street during the three-year period, the most common types were left-turn related (17), followed by rear-end (7), and

entering at an angle (7). One collision at this intersection involved a motor vehicle striking a pedestrian, which occurred when the vehicle failed to yield when turning right in wet dark conditions. The 17 left-turn related collisions are comprised of vehicles turning left from all four approaches equally. The left-turn signal phasing for all four approaches are currently protected/permitted.

Of the 21 collision at the intersection of Slater Avenue / NE 120th Street during the three-year period, the most common types were left-turn related (7), entering at angle (7), and rear-ends (3).

Along the segment of NE 124th Street there was one reported fatality that was the result of a motorist striking a street light pole in dark conditions. There were two pedestrian-related and one bicyclist-related collisions that were reported in the general study area during the three-year period. The pedestrian collisions occurred at 124th Avenue NE / NE 116th Street and Slater Avenue NE / NE 124th Street. The bicycle collision occurred at the intersection of Willows Road NE / 148th Avenue NE.

Forecasted Conditions

Planned Improvements

The 2019-2024 Transportation Improvement Program (TIP) for the City of Redmond and the *2019-2024 Preliminary Six-Year Capital Improvement Program* (CIP) for the City of Kirkland were reviewed for future transportation improvements that may impact the street network within the study area. One improvement project was identified that may affect future traffic operations at study intersections:

- 124th Avenue NE between NE 116th Street and NE 124th Street is planned to be widened from three lanes to five lanes including a two-way center turn lane. Purchase of the necessary land for this improvement is scheduled for 2020 with construction starting in 2021.

The proposed Proctor Willows project is anticipated to be completed in 2021. Thus, this improvement was not assumed in the future traffic operations analysis.

Non-Motorized Improvements

Two non-motorized improvements are also planned near the project:

- A mid-block crossing with HAWK signals is planned along Willows Road NE. This crossing would connect the existing golf course with office buildings to the west allowing access to transit stops. This project is expected to be finished in 2019.
- A pedestrian and bicycle bridge is planned at the NE 124th Street / 124th Avenue NE intersection along the Cross Kirkland Corridor (CKC). Design would be consistent with the CKC Master Plan.

Future Without-Project Traffic Volumes

Future without-project traffic volumes for the 2021 horizon year were estimated using different methods and assumptions dependent on the jurisdiction (Redmond or Kirkland).

For the four study intersections located in the City of Redmond:

- A 2 percent annual growth rate was applied to existing AM and PM peak hour traffic volumes. This growth rate is identified as an appropriate rate per the City of Redmond's *Transportation Impact Analysis Outline*.
- AM and PM peak hour project trips generated by two nearby "pipeline" developments (Willows Preparatory School²) and Willow Building X were included in the future traffic volumes.

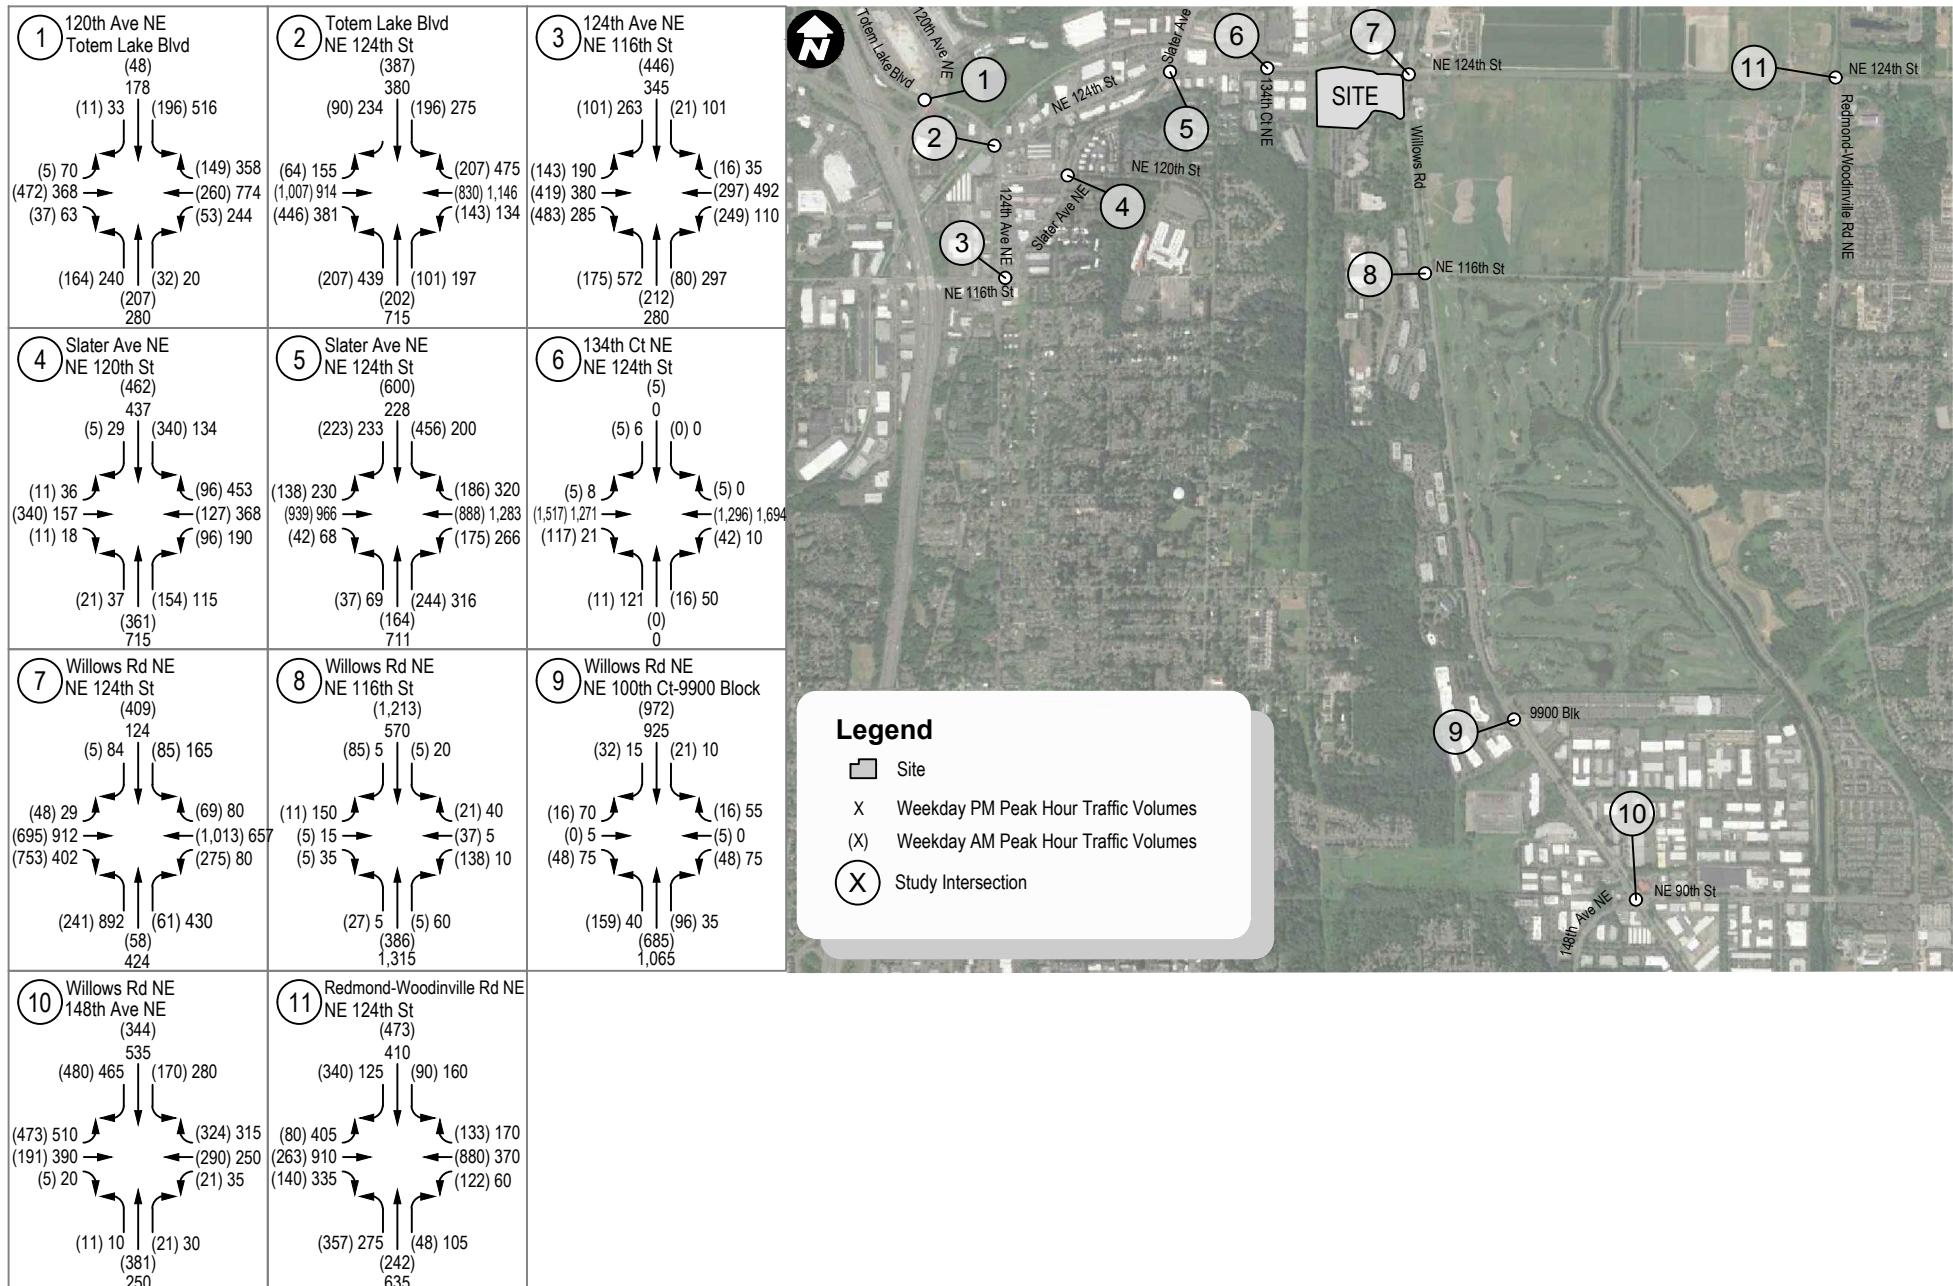

² Willows Preparatory School located southeast of the Redmond-Woodinville Road NE / NE 124th Street intersection. Traffic Impact Analysis prepared by Gibson Traffic Consultants. November 2016.

For the seven study intersections located in the City of Kirkland:

- Future PM peak hour volumes were generated by Kirkland's travel model³ and provided by Kirkland development review staff. These model volumes are provided in Appendix D.
- Future AM peak hour volumes were estimated by applying a 2 percent growth rate to the existing AM peak hour traffic volumes based on coordination with development review staff.

Future (2021) without-project traffic volumes for all eleven study intersections are illustrated in Figure 4.

³ Some model volumes were somewhat lower than existing volumes at certain intersections. This is because traffic volumes fluctuate from day-to-day and whereas existing volumes were recorded on a weekday in November 2018, volumes used to calibrate the City's travel model were collected on a different day. To account for this and to assure no future volumes were lower than existing volumes, future model volumes were scaled up to match existing volumes.

Future (2021) Without-Project AM and PM Peak Hour Traffic Volumes

Proctor Willows

FIGURE

Trip Generation

Weekday daily, AM peak hour, and PM peak hour trips were estimated using trip rates referenced for Land Use #221 (Multifamily Housing (Mid-Rise)), Land Use #710 (General Office Building), Land Use #565 (Daycare) and Land Use #820 (Shopping Center) from the *Trip Generation Manual*, 10th Edition, Institute of Transportation Engineers (ITE), 2017. Internal capture rates were applied per *ITE Trip Generation Handbook*, 3rd Edition. Pass-by trips were deducted from the PM peak hour only per *ITE Trip Generation Handbook*, 3rd Edition.

As a conservative estimate, all trips are assumed to be vehicular in nature with no mode split adjustments for walking, bicycling or use of transit.

Table 4 summarizes the weekday vehicle trip generation. Detailed trip generation calculations including the internal capture and pass-by adjustments are provided in Appendix E.

Table 4. Project Trip Generation Estimates

Land Use	Size	Trip Rate ¹	Net Project Trips		
			Total	In	Out
Weekday Daily					
Multifamily Housing	370 DU	5.44	2,004	1,002	1,002
Office	9 ksf	9.74	74	37	37
Daycare	8.5 ksf	47.62	332	166	166
Retail	5 ksf	37.75	152	76	76
Total			2,562	1,281	1,281
Weekday AM Peak Hour					
Multifamily Housing	370 DU	0.36	132	35	97
Office	9 ksf	1.16	10	9	1
Daycare	8.5 ksf	11.00	94	50	44
Retail	5 ksf	0.94	4	2	2
Total			240	96	144
Weekday PM Peak Hour					
Multifamily Housing	370 3DU	0.42	151	92	59
Office	9 ksf	1.15	8	1	7
Daycare	8.5 ksf	11.12	95	45	50
Retail	5 ksf	3.81	10	5	5
Total			264	143	121

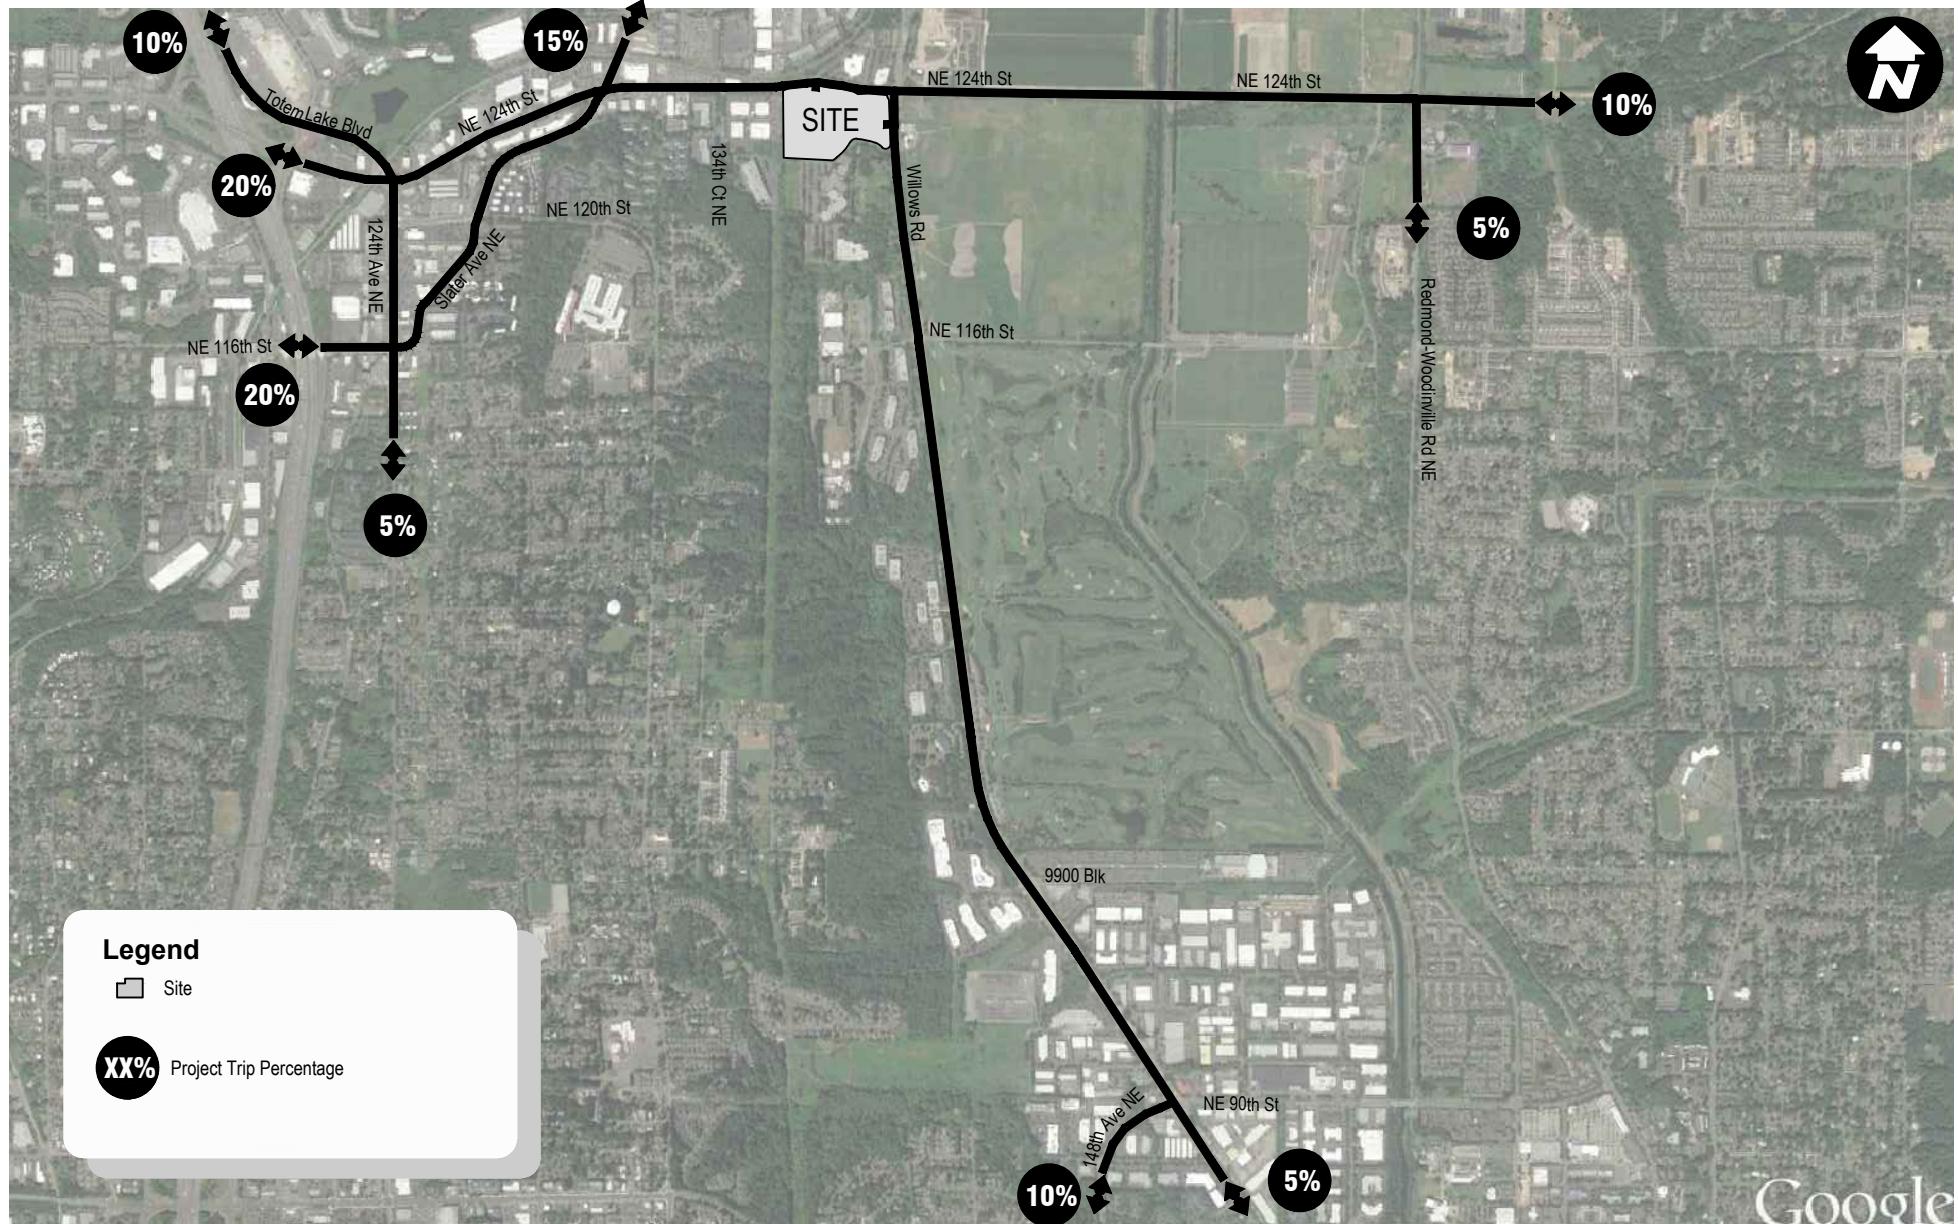

Notes: DU=dwelling units, ksf=1,000 square feet

- Average trip rates from the *Trip Generation Manual* (ITE, 10th Edition, 2017); the effective trip rate based on the fitted curve equation was used to estimate PM peak hour trips for multifamily housing based on recommendations in the *Trip Generation Handbook* (ITE, 3rd Edition, 2017)

The proposed mixed-use development is expected to generate 2,562 net new daily trips, 240 net new AM peak hour trips, and 264 net new PM peak hour trips.

Trip Distribution & Assignment

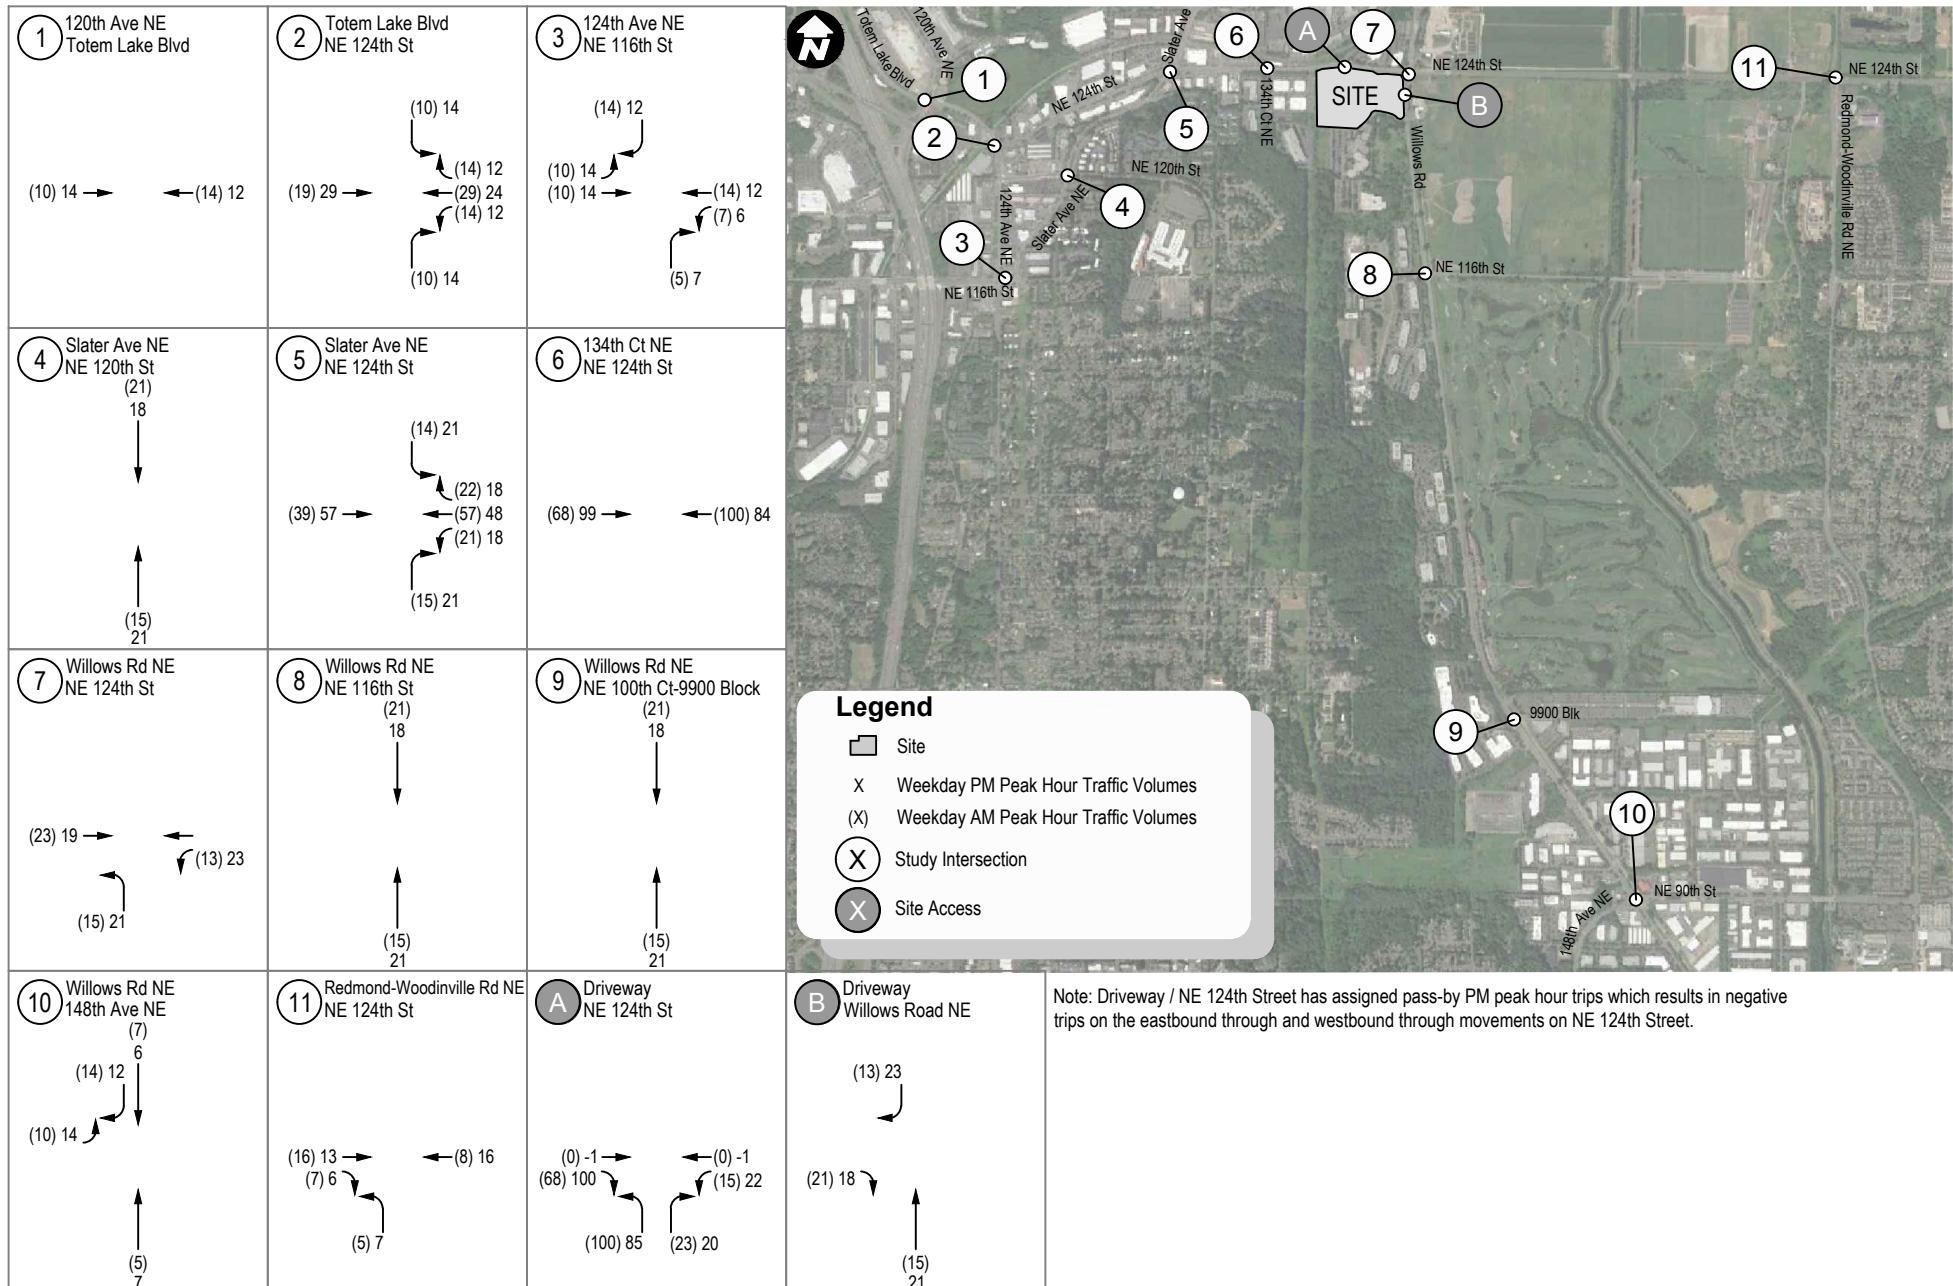

Trip distribution patterns were estimated based on the City of Kirkland's travel model. Based on the model, approximately 70 percent of project trips would be oriented to/from the west on NE 124th Street, 15 percent to/from the east on NE 124th Street, and 15 percent to/from the south on Willows Road NE. Figure 5 illustrates the estimated trip distribution and Figure 6 illustrates project trip assignment at study intersections.

Weekday AM and PM Peak Hour Trip Distribution

Proctor Willows

FIGURE

Weekday AM and PM Peak Hour Project Trip Assignment

Proctor Willows

Future With-Project Traffic Volumes

Future with-project traffic volumes were estimated by adding site-generated weekday AM and PM peak hour traffic volumes to future (2021) without-project traffic volumes. The resulting 2021 with-project traffic volumes are illustrated in Figure 7.

Future Traffic Operations

A level of service analysis was conducted for 2021 without- and with-project conditions assuming no channelization improvements and no change in existing signal timing at study intersections. The future with-project analysis documents the potential project impacts of adding new trips to the study intersections.

The results of the LOS analysis are summarized in Table 5. Levels of service worksheets for 2021 without- and with-project traffic conditions are included in Appendix C of this report.

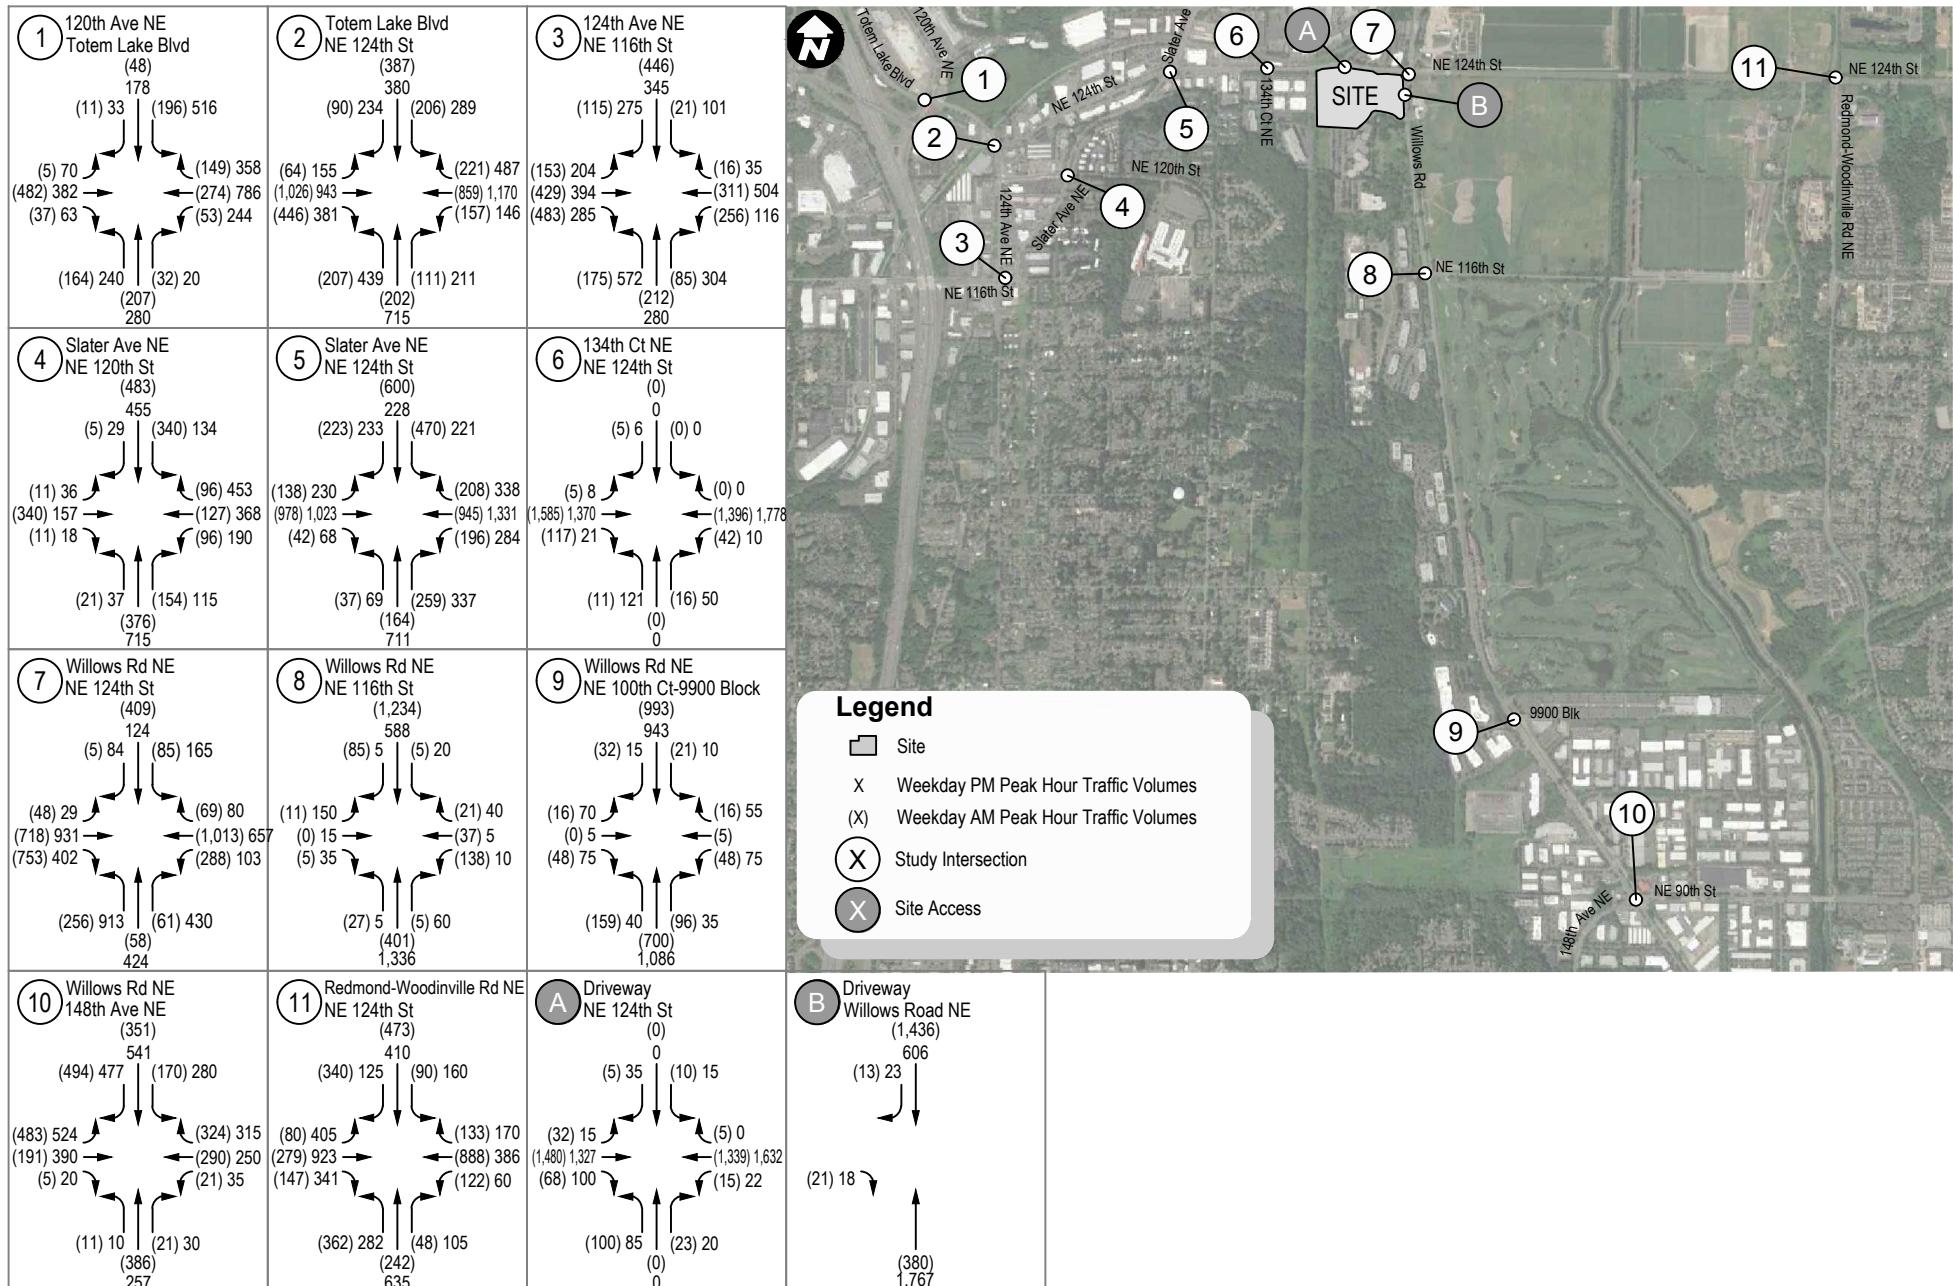

Table 5. Future (2021) Level of Service Summary

2. Average delay in seconds per vehicle

3. LOS standard of LOS E or better per PSRC

Future (2021) With-Project Weekday AM and PM Peak Hour Traffic Volumes

Proctor Willows

FIGURE

As shown in Table 5, with the addition of project traffic and assuming no change in existing channelization and signal timing, all intersections would operate at the same LOS compared to without-project conditions.

For intersections that do not meet LOS Standards:

- During the AM peak Hour, traffic operations at two study intersections would continue not meeting the applicable LOS standard, including Slater Avenue / NE 124th Street and Willows Road / NE 124th Street.
- During the PM peak hour, traffic operations at five study intersections would continue not meeting the applicable LOS standard, including Totem Lake Boulevard / NE 124th Street, 124th Avenue NE / NE 116th Street, Slater Avenue NE / NE 120th Street, Slater Avenue NE / NE 124th Street, and Redmond-Woodinville Road / NE 124th Street.

Site Access Analysis

Traffic Signal Warrants

The *Manual of Uniform Traffic Control Devices* (MUTCD⁴) is regularly used to evaluate warrants for the installation of traffic signals. Eleven warrants are described with the instruction that a traffic control signal should not be installed unless one or more of the warrants are met. Two of the 11 warrants were evaluated at the proposed signalized driveway on NE 124th Street, including Warrant 1 (Eight-Hour Vehicular Volume) and Warrant 2 (Four-Hour Vehicular Volume). The remaining warrants are not applicable to this intersection and as such, were not evaluated.

In estimating future hourly traffic volumes at the proposed driveway, it was assumed that the eighth and fourth highest hours would represent approximately 80 and 90 percent of weekday AM peak hour project traffic, respectively. This assumption is supported by traffic counts at existing multi-family developments in the area. The future northbound approach will be a single outbound lane so total northbound approach volumes were considered in the warrant analysis. It was determined that both Warrant 1 and Warrant 2 would be satisfied under future with-project conditions⁵. The signal warrant calculations and summary are available in Appendix F.

Traffic Operations

For the new proposed driveway on NE 124th Street, the intersection was modeled as a traffic signal coordinated in the east-west movements with cycle lengths matching the existing peak hour cycle lengths. During the future AM peak hour, the proposed signal is anticipated to operate at LOS A, while the right-in/right-out driveway on Willows Road NE is anticipated to operate at LOS D. During the future PM peak hour, the proposed traffic signal and right-in/right-out driveway on Willows Road NE are both anticipated to operate at LOS B.

Sight Distance

Entering and stopping sight distance was analyzed at the two proposed access driveways. Considering that the signalized driveway is in Kirkland jurisdiction and the right-in/right-out driveway is in Redmond jurisdiction, both cities' sight distance requirements were reviewed.

⁴ *Manual on Uniform Traffic Control Devices*. 2009 Edition. Chapter 4C. Traffic Control Signal Needs Studies.

⁵ Even if the eighth and fourth highest hours represented approximately 60 and 65 percent of AM peak hour traffic, respectively, both Warrant 1 and Warrant 2 would be satisfied under future with-project conditions.

For the City of Redmond, the sight distance requirements⁶ for a 45-mph roadway (Willows Road NE) would require 610 feet of entering sight distance (for eastbound-to-southbound right-turning motorists) based on a 14.5-foot setback. For stopping sight distance in the southbound direction, 495 feet is required.

For the City of Kirkland, the sight distance requirements⁷ for a 35-mph roadway (NE 124th Street) call for a 14-foot setback with a minimum sight distance of 390 feet (for northbound-to-eastbound motorists turning right on red). Accounting for the existing uphill grade (approximately 8 percent) to the east and existing downhill grade (approximately 6 percent) to the west, the minimum sight distance was adjusted to 351 feet and 429 feet, respectively, in accordance with Exhibit 9-53 of Chapter 9 of *A Policy on Geometric Design of Highways and Streets* (AASHTO, 4th Edition). In this case, both the stopping and entering sight distance requirements are equal.

Sight distance exhibits prepared by KPFF are provided in Appendix G and show that both proposed driveways would meet minimum entering and stopping sight distance requirements in each respective jurisdiction. As stated in this exhibit, topographic contours represent existing conditions, not future conditions. Future designs will be prepared showing future topographic contours and demonstrating that the sight distance triangles will be free of obstruction, including slopes on the southwest corner of this new intersection.

Traffic Safety

Traffic generated by the proposed development would likely result in a proportionate increase in the probability of traffic accidents. It is unlikely, however, that this traffic would create a safety hazard or significantly increase the number of reported accidents at the locations within the project vicinity, based on the minimal increase in overall traffic volumes and the impacts to intersection operations.

To address existing safety issues at the 124th Avenue NE / NE 116th Street intersection and particularly the frequency of left-turn type collisions, the City of Kirkland could consider changing the left-turn phasing from protected/permitted to protected-only. However, it is important to note that this change would affect traffic operations and degrade the intersection from LOS D to LOS E in the future AM peak hour⁸.

School Walk Routes

Public school for children living in the proposed development would be provided by the Lake Washington School District (LWSD) and students would be assigned to Rose Hill Elementary School, Rose Hill Middle School and Lake Washington High School. The distance between the project site and these schools is approximately 3.5 to 4 miles.

Based on information provided on the LWSD website⁹ and coordination with district transportation planning staff, students attending all three schools would be provided school bus service. Future school bus stop locations for prospective students will be determined by LWSD planning staff once future students enroll at each respective school.

⁶ Redmond Zoning Code – Appendix 2. Tables 6 & 9

⁷ City of Kirkland Sight Distance Guidelines. Table 2. Sight Distance Triangle Guidelines

⁸ The proposed development's proportional share of daily traffic at this intersection is approximately 5 percent, below the City of Kirkland's LOS E threshold of 15 percent for mitigation.

⁹ <http://busroutes.lwsd.org/elinkrp/Students/BasicTransBoundarySearch.aspx>

Summary of Analysis and Mitigation

Executive Summary

- The proposed project would construct 195 apartment units, 175 townhouse units, approximately 9,000 sf of office space, an 8,500-sf daycare, and 5,000 sf of retail space.
- Access to the project would be provided via two new driveways, one signalized driveway on NE 124th Street and one right-in/right-out driveway on Willows Road NE.
- The proposed mixed-use development is expected to generate 2,562 net new daily trips, 240 net new AM peak hour trips, and 264 net new PM peak hour trips.

Summary of Impacts

- All study intersections in the future would operate at the same LOS with or without the addition of project trips.
- One intersection in the City of Redmond, Redmond-Woodinville Road / NE 124th Street, would not meet the applicable LOS standard. Possible mitigation at this intersection is identified in the following section.
- Five intersections (listed below) would not meet the City of Kirkland's LOS D or better standard. As necessary, possible mitigation at these intersections is identified in the following section.
 - Totem Lake Boulevard / NE 124th Street – LOS E (AM and PM peak hour)
 - 124th Avenue NE / NE 116th Street – LOS E (AM and PM peak hour)
 - Slater Avenue NE / NE 120th Street – LOS F (PM peak hour)
 - Slater Avenue NE / NE 124th Street – LOS F (AM and PM peak hour)
 - Willows Road NE / NE 124th Street – LOS F (AM peak hour)
- The proposed signalized driveway is anticipated to operate at LOS A and LOS B during the future AM and PM peak hour, respectively. The right-in/right-out driveway is anticipated to operate at LOS D and B during the future AM and PM peak hour, respectively.

Mitigation Measures

This section summarizes recommended mitigation measures at Redmond and Kirkland study intersections.

City of Redmond

As disclosed in previous sections, the Redmond-Woodinville Road / NE 124th Street intersection would operate at LOS F during the future PM peak hour and not meet the applicable standard of LOS E or better. The proposed project is anticipated to increase PM peak hour traffic at this location by 39 vehicles or, on average, less than one vehicle per minute. Project-generated traffic would represent approximately 1 percent of the total traffic anticipated to enter this intersection during future PM peak hour conditions and increase average vehicular delay by 3 seconds (from approximately 87 to 90 seconds).

PM peak hour signal optimization at Redmond-Woodinville Road / NE 124th Street would mitigate the project's potential impact to traffic operations while maintaining the existing cycle length. With these changes, the intersection would operate at LOS E (80 seconds of average delay), better than the future without-project condition of LOS F (87 seconds of average delay). Detailed LOS worksheets and optimized signal timing sheets for the mitigated condition can be found in Appendix C.

City of Kirkland

As reviewed in the section above, five intersections located in the City of Kirkland would not meet LOS standards. For the City of Kirkland, mitigation¹⁰ for impacts at intersections are required when an intersection performs at LOS E or LOS F and the project's proportional share of daily traffic is greater than 15 percent or 5 percent, respectively. Detailed proportionate share worksheet calculations are provided in Appendix H. Proportional share was calculated at each of the five poorly operating intersections and summarized below:

- Totem Lake Boulevard / NE 124th Street (LOS E): 3.9 percent < 15 percent
- 124th Avenue NE / NE 116th Street (LOS E): 4.9 percent < 15 percent
- Slater Avenue NE / NE 120th Street (LOS F): 1.2 percent < 5 percent
- Slater Avenue NE / NE 124th Street (LOS F): 15 percent > **6.2 percent** > 5 percent
- Willows Road NE / NE 124th Street (LOS E): 2.6 percent < 15 percent

As seen above, the project's proportional share at Slater Avenue NE / NE 124th Street would be greater than Kirkland's 5 percent threshold for LOS F operations.

AM and PM peak hour signal optimization at Slater Avenue NE / NE 124th Street would mitigate the project's potential impact to traffic operations while maintaining the existing cycle length. With these changes, the intersection would operate at LOS E (79.7 seconds of average delay) during the AM peak hour, better than the future without-project condition of LOS F (103 seconds of average delay) and would operate at LOS E (69 seconds of average delay) during the PM peak hour, better than the future without-project condition of LOS F (96 seconds of average delay). Detailed LOS worksheets and optimized signal timing sheets for the mitigated conditions can be found in Appendix C.

Frontage Improvements / Vehicle Queuing Analysis

The existing transportation network will be enhanced by way of frontage improvements. For example, a new buffered bicycle lane and multi-modal trail would be constructed on the south side of NE 124th Street. This trail in conjunction with the new signalized site access and traffic signal at Willows Road NE / NE 124th Street would provide a protected pedestrian and bicycle connection between the future Eastside Rail Corridor Trail north of NE 124th Street and the future extension of the Redmond Central Connector (Phase III) east of Willows Road NE. On Willows Road NE, frontage improvements would include a second southbound through lane, on-street bicycle lane, and new concrete sidewalk.

Improvements to transit facilities would be incorporated into the frontage improvements along NE 124th Street. The existing transit stop on the south side of NE 124th Street just west of Willows Road NE would be relocated to the far side of the proposed signalized driveway and bus shelters would be constructed on the north and south sides of NE 124th Street.

In conjunction with frontage improvements along the south side of NE 124th Street, it is recommended that the existing eastbound right-turn lane at the Willows Road NE / NE 124th Street intersection be lengthened such that eastbound through queues during the future AM and PM peak hours do not block access to this turn lane. Vehicle storage for this lane currently extends approximately 150 feet west of Willows Avenue NE.

¹⁰ Traffic Impact Analysis Guidelines. Table 1. Mitigations for SEPA impacts at intersections

As part of the traffic operations analysis, it was determined that future eastbound through queues at Willows Road NE / NE 124th Street will be greatest during the PM peak hour and based on future with-project traffic volumes and existing signal timing, the 95th-precentile queue length would be approximately 625 feet. *Synchro 9* reports detailing this queue length is included in Appendix C. To avoid this queue blocking access to the eastbound right-turn lane, the taper for this turn lane would need to begin approximately 700 feet west of Willows Road NE. This assumes a 75-foot taper length.

It is important to note that this right-turn lane in combination with the outside eastbound through lane west of the taper would provide adequate storage for the 95th-percentile queue associated with eastbound right-turns because during the hour of greatest right-turn demand (AM peak hour), only approximately 335 feet of the existing eastbound through lanes would be needed to accommodate the 95th-percentile queue for this movement.

Transportation Impact Fees

The City of Redmond Impact fees were estimated based on the Impact Fee Schedule provided on the City of Redmond website¹¹. Transportation impact fees for the multi-family and commercial land uses are as follows:

- Multifamily Residential Use: \$4,922.51/unit x 370 units = \$1,821,329
- Office Use: \$23.32/sf x 9,000 sf = \$209,880
- Daycare Use: \$63.05/sf x 8,500 sf = \$535,925
- Retail Use: \$22.45/sf x 5,000 sf = \$112,250
- **All Uses: \$2,679,384**

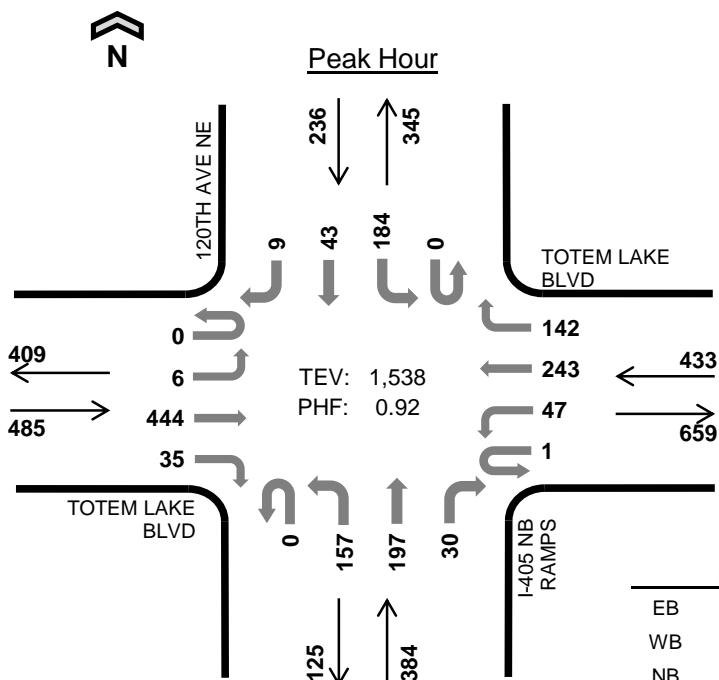

The impact fee schedule, effective until January 1, 2020, is included in Appendix I.

Highway Capacity Manual 2010

Signalized intersection level of service (LOS) is defined in terms of a weighted average control delay for the entire intersection. Control delay quantifies the increase in travel time that a vehicle experiences due to the traffic signal control as well as provides a surrogate measure for driver discomfort and fuel consumption. Signalized intersection LOS is stated in terms of average control delay per vehicle (in seconds) during a specified time period (e.g., weekday PM peak hour). Control delay is a complex measure based on many variables, including signal phasing and coordination (i.e., progression of movements through the intersection and along the corridor), signal cycle length, and traffic volumes with respect to intersection capacity and resulting queues. Table 1 summarizes the LOS criteria for signalized intersections, as described in the *Highway Capacity Manual 2010* (Transportation Research Board, 2010).

Table 1. Level of Service Criteria for Signalized Intersections

Level of Service	Average Control Delay (seconds/vehicle)	General Description
A	≤10	Free Flow
B	>10 – 20	Stable Flow (slight delays)
C	>20 – 35	Stable flow (acceptable delays)
D	>35 – 55	Approaching unstable flow (tolerable delay, occasionally wait through more than one signal cycle before proceeding)
E	>55 – 80	Unstable flow (intolerable delay)
F ¹	>80	Forced flow (congested and queues fail to clear)

Source: *Highway Capacity Manual 2010*, Transportation Research Board, 2010.

- If the volume-to-capacity (v/c) ratio for a lane group exceeds 1.0 LOS F is assigned to the individual lane group. LOS for overall approach or intersection is determined solely by the control delay.

Unsignalized intersection LOS criteria can be further reduced into two intersection types: all-way stop and two-way stop control. All-way stop control intersection LOS is expressed in terms of the weighted average control delay of the overall intersection or by approach. Two-way stop-controlled intersection LOS is defined in terms of the average control delay for each minor-street movement (or shared movement) as well as major-street left-turns. This approach is because major-street through vehicles are assumed to experience zero delay, a weighted average of all movements results in very low overall average delay, and this calculated low delay could mask deficiencies of minor movements. Table 2 shows LOS criteria for unsignalized intersections.

Table 2. Level of Service Criteria for Unsignalized Intersections

Level of Service	Average Control Delay (seconds/vehicle)
A	0 – 10
B	>10 – 15
C	>15 – 25
D	>25 – 35
E	>35 – 50
F ¹	>50

Source: *Highway Capacity Manual 2010*, Transportation Research Board, 2010.

- If the volume-to-capacity (v/c) ratio exceeds 1.0, LOS F is assigned an individual lane group for all unsignalized intersections, or minor street approach at two-way stop-controlled intersections. Overall intersection LOS is determined solely by control delay.

Appendix E: Trip Generation

Daily Trip Generation

Proposed Land Use	Size	Units	Trip Generation Rate ¹	Total Unadjusted Veh. Trips	Reduction for Internal Capture ²	Subtotal	New Daily Trips				
							Pass-by Rate ³	Reduction for Pass-by	Total	In	Out
Multifamily Housing Mid-Rise (LU 221)	370	DU	5.44	2,010	6	2,004	0%	0	2,004	1,002	1,002
Office (LU 710)	9	1,000 gsf	9.74	90	2	88	17%	14	74	37	37
Daycare (LU 565)	8.5	1,000 gsf	47.62	400	0	400	17%	68	332	166	166
Retail (LU 826)	5	1,000 gsf	37.75	190	6	184	17%	32	152	76	76
Total			2,690	14	2,676		114	2,562	1,281	1,281	

1. Average trip rates and equations from ITE Trip Generation Manual, 10th edition (2017).

2. ITE Trip Generation Handbook, 3rd edition (2017) does not provide guidance to incorporating internal capture into daily trip generation. Internal capture subtracted from unadjusted trips represents the summation of AM and PM peak hour internal capture reductions.

3. Assumed daily pass-by rate to be average of AM and PM pass-by rates.

Weekday PM Peak Hour Trip Generation

Proposed Land Use	Size	Units	Trip Generation Rate ¹	% IN ²	Total Unadjusted Veh. Trips	Unadjusted Veh. Trips IN	Unadjusted Veh. ¹Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

²Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

³Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

⁴Enter vehicle occupancy assumed in Table 1-P vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made.

⁵Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-P.

⁶Person-Trips

*Indicates computation that has been rounded to the nearest whole number.

DATE:

2/1/2017

Daily Project Traffic Entering the Intersection

(Total of both approaches divided by two)

Major Street Volume V ₁ =	128.184	127.1915	129.1765	Major
Minor Street Volume V ₂ =	0	0	0	Minor

(Total of both approaches divided by two)

*Do not leave cell empty for zero volume

Determine Geometric Factors

Major Street	Minor Street	Number of Lanes				Geometric Factors			
		f ₁	f ₂	f ₃	f ₄	f ₁	f ₂	f ₃	f ₄
2	2	1.000	1.330	1.000	1.330				
2	1	1.000	1.000	1.000	1.000				
1	2	0.833	1.330	0.833	1.330				
1	1	0.833	1.000	0.833	1.000				

f ₁	f ₂	f ₃	f ₄
1	1	1	1

Calculate Base Percentages

P ₁ =V ₁ /(10,000 x f ₁) =	1.28%
P ₂ =V ₂ /(5,000 x f ₂) =	0.00%
P ₃ =V ₁ /(15,000 x f ₃) =	0.85%
P ₄ =V ₂ /(2,500 x f ₄) =	0.00%

Calculate Proportional Share

S ₁ =(P ₁ +P ₂)/2=	0.64%
S ₂ =(P ₃ +P ₄)/2=	0.43%

$$\text{Intersection Proportional Share} = \text{Maximum of } S_1 \text{ and } S_2 = \underline{\hspace{2cm} 0.64\% }$$

Significant Intersection? no

1. Number of through lanes. Do not count exclusive turn lanes. Use the smaller number of lanes if the number of lanes is unequal on two legs. For Example, if one minor leg has two lanes and one minor leg has one lane, the number of lanes on the minor leg is one.

Computed By: Darwin Li

Appendix I: Impact Fee Schedule

City of Redmond Impact Fees Schedule

Effective as of January 1, 2019, the next fee update will go into effect January 1, 2020.

The tables below provide Fire, Parks, Transportation, and Schools Impact Fees currently in effect. Projects are assessed by their land use type and the associated units of that land use type to determine what the impact fees shall be.

All impact fees shall be paid at building permit issuance.

Fire		
Land Use	Units	Impact Fee Per Unit
Single-Family Residences	1 housing unit	\$121.42
Mobile Homes and Detached Single-Family Manufactured Homes	1 housing unit	\$145.03
Multi-Family Residences	1 housing unit	\$205.09
Residential Suites	1 residential suite	\$102.55
Offices	1,000 sq. ft. of GFA	\$169.80
Retail Trade	1,000 sq. ft. of GFA	\$195.73
Manufacturing	1,000 sq. ft. of GFA	\$20.05

Parks		
Land Use	Units	Impact Fee Per Unit
Single-Family Residences (inclusive of Mobile Homes and Detached Single-Family Manufactured Homes)	1 housing unit	\$4,738.14
Multi-Family Residences	1 housing unit	\$3,289.31
Residential Suite	1 residential suite	\$1,787.78
Offices	1,000 sq. ft. of GFA	\$1,283.48

Land Use	Units	Impact Fee Per Unit
Single-Family Residences (inclusive of Mobile Homes and Detached Single-Family Manufactured Homes)	1 housing unit	\$12,294.00
Multi-Family Residences	1 housing unit	\$624.00

Impact Fee Schedule Notes

* Requires an impact study to be conducted by a traffic engineer for the applicant. If the proposed land use does not fit into one of the categories of the Transportation Impact Fee Schedule, the applicant may choose to do an impact study to apply the PMT impact fee. Additionally, the applicant may choose to do an impact study to apply the PMT impact fee if he/she believes that the impacts generated by development are less than those assessed in the Transportation Impact Fee Schedule for a comparable land use.

** Impact Fee Basis: 2018-2023 LWSD Capital Facilities Plan approved on 6/25/2018

- **GFA** = Gross Floor Area
- **GLA** = Gross Leasable Area
- A \$65.00 school admin fee will be assessed to the School Impact fee.
- Fire, Parks, Transportation and School impact fees are effective per Ordinance 2935.
